Abstract: It is now common knowledge that the entire standard model of particle physics is wrong. Any Wikipedia page or scientific article that strives to explain anything with particles is probably wrong and can be disregarded as arbitrary.

A simple diagram shows why all of particle physics and quantum mechanics is a complete failure. They have no foundation. They built their foundation on the concept of mass. It is requested by the author that for 21st century science to continue we must build our theory on electromagnetism, which is the most pervasive and powerful force in the universe.

Physics as of 2012 is literally a free for all and all of established science concerning particle physics has completely disintegrated. It is requested by the author of this paper for the reader to research actual mechanisms that are mechanical in nature, as the particle zoo contains zero mechanical explanation. Quantum mechanics is a lie, quantum mechanics contains ZERO mechanics it only contains different particles. Putting the wrong concept as the foundation is the same problem Geocentrism had. The universe operates according to rules of electromagnetism, not "mass". Another diagram below the first one is given for the reader to illustrate this problem.

Here is a diagram that illustrates the 21st century Scientific Revolution.
