

The Definition of Time

Jeffrey J Wolynski

January 28, 2013

Abstract: A definition for time is given.

Time: Motion

Using this easy to understand, unambiguous definition for time it becomes apparent that there is no time dimension independent of 3 dimensional reality. This definition also means that there is no such thing as past, present or future there is only motion. This means the mathematical physicists that try to justify time as a 4th physical dimension are simply insane. You cannot move through time because time itself is motion. No grand philosophizing, no confusing math equations, no mass confusion trying to visualize a flowing of time. Time and motion are synonymous. Time is literally motion itself. When the clock arms move it is counting time, when they do not move the clock is not counting time. Just because the clocks arms move at a noticeable rate does not mean there is another dimension to reality. The grand simplicity of time has confused scholars for thousands of years. We can see this confusion on Wikipedia page on *time*:

Time is a dimension in which events can be ordered from the past through the present into the future,^{[1][2][3][4][5][6]} and also the measure of durations of events and the intervals between them.^{[3][7][8]} Time has long been a major subject of study in religion, philosophy, and science, but defining it in a manner applicable to all fields without circularity has consistently eluded scholars.

It gets worse as you then look up the definition of *motion* on Wikipedia:

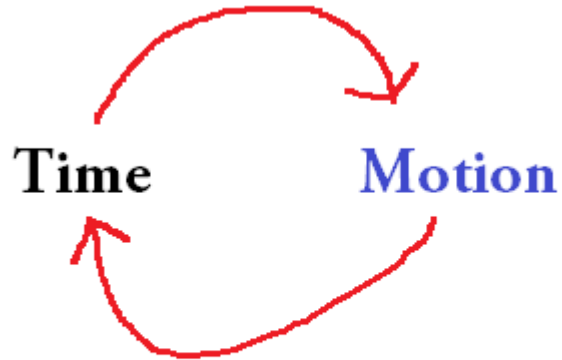

*In physics, **motion** is a change in position of an object with respect to time and its reference point.*

It jumps off the insanity cliff of pure delusion when they start inventing motionless reality:

A body which does not move is said to be at rest, motionless, immobile, stationary, or to have constant (time-invariant) position.

Since time means motion, they literally say that there is a timeless reality that has been measured. It is insane to believe this. They want you to believe that there are parts to the universe that do not experience time/motion. This should be no surprise to the reader as a motionless

universe is a pillar to the mathematical physics religion. Their religion has been continuing to make a mockery of the sciences with irrational, delusional math conjecture that makes definitions circular and ruins all ability to make reasonable conclusions for how nature operates. Separating time from motion makes it circular:

Circular Definitions are required in the mathematical physics religion.
