

## THE BIG CRUNCH IDEAS

Rev. Thomas Scott Zolotor free the souls predicted that the universe would stop expanding and fall back on itself known as the big crunch. He had this idea since 1992 when he figured out the calculations needed to explain it. He wrote a paper on it that was rejected by an astronomer back in 1994. Years later it turns out Zolotor was correct all along.

IN 2012 Zolotor wrote this to JJ Dewey his friend. JJ also came to the same conclusion that the universe was collapsing on itself. Here is the site:
