YOU "FIRMLY" WILL HOLD ON LIKE GRIM DEATH ..., THE EARTH!

Today there is no the finished uniform theory or a hypothesis not only concerning processes of emergence and evolution of the Universe, but even its separate objects and substances. The made attempts of scientists somehow to open or prove secrets of the Universe aren't perceived at all and aren't logical, and without "the beginning and the end". Persistent attempts of "impact" on human consciousness by some strange theories like strings, a set of measurements, neopredelennost etc. become even more dangerous. Also persistently and unsubstantially scientists don't want to leave alone GOD and to use his fruits. The above methods of "tests and mistakes" only take away towards effort of scientists, and also bring additional chaos in process of knowledge of ALL.

The purpose of our work is attempt of establishment of interrelation of the major physical properties of objects of the Universe with their structure and stages of evolution. Questions of a structure and evolution of planets on the basis of an exclusive hypothesis of a structure and evolution of planets are considered.

Summary

Today there is no the finished uniform theory or a hypothesis not only concerning processes of emergence and evolution of the Universe, but even its separate objects and substances. The made attempts of scientists somehow to open or prove secrets of the Universe aren't perceived at all and aren't logical, and without "the beginning and the end". Persistent attempts of "impact" on human consciousness by some strange theories like strings, a set of measurements, neopredelennost etc. become even more dangerous. Also persistently and unsubstantially scientists don't want to leave alone GOD and to use his fruits. The above methods of "tests and mistakes" only take away towards effort of scientists, and also bring additional chaos in process of knowledge of ALL.

The purpose of our work is attempt of establishment of interrelation of the major physical properties of objects of the Universe with their structure and stages of evolution. Questions of a structure and evolution of planets on the basis of an exclusive hypothesis of a structure and evolution of planets are considered.

Keywords: evolution, structure, planet, Universe, Earth, Ceres, belt of asteroids

1. Main stages of existence of planets

Initial and final stages of existence of planets of our limited and ordered Universe [1] – EMPTINESS (anything!) and in this work aren't considered

We classified the following stages of evolution of planets (fig. 1):

1. Power education – GO1
2. Basic structure (a kernel, a cloak, a cover) – BCO
3. Final structure (cover or kernel!) – VCO/CCO
4. Power education – GO2

In the course of evolution of planets the cloak disappears by merge to a kernel or a cover.

According to the accepted classification, it is possible to allocate the following characteristic signs of a structure of planets:

1. BCO in a certain degree have to correspond the nominal properties corresponding to the "favorable" period of evolution (existence of axial rotation, a magnetic field and activity).
2. VCO is characteristic aspiration to zero axial rotation, a magnetic field and volcanic activity.
3. CCO differs in the increased radiation activity, axial rotation and a magnetic field.

2. Hypothesis of a structure and evolution of planets

SOLID-STATE PLANETS AT THE FINAL STAGE OF EVOLUTION BECOME HOLLOW, AND GASEOUS – SOLID-STATE!

The fact of its recognition or full ignoring by scientists will become the proof of correctness of this hypothesis.

On the basis of the made hypothesis we claim:

BELT OF ASTEROIDS ARE SPLINTERS OF THE COVER OF THE PHAETON, WHICH KERNEL – CERES!

We don't provide any additional comments of rather this statement as we consider it obvious taking into account that the belt of asteroids is in a border area between solid-state and gaseous planets.

3. Structural classification of planets of Solar system

In relation to Solar system of the planet it is possible to classify as follows:

1. BCO: SUN!
2. VCO: EARTH, Mercury, Mars, Moon, Venus. The infrared photos of Earth and Venus confirming existence at them of a cover and "lack" of the KERNEL are given as an example in fig. 2!
3. CCO: Jupiter, Saturn, Uranium, Neptune

Conclusion

As a result of the theoretical researches conducted by us an attempt of establishment of interrelation between structure, properties and stages of existence of space objects in the Universe was made. Any, initially received information on space object, will allow to give in more detail a preliminary estimate of its major physical properties. Besides, as an example were put forward by us original and surprising, in our opinion, hypotheses of an origin of an asteroid belt, disappearance and emergence of space objects of the Universe!

We offered for consideration only some fragments of the scientific reserve created by us. In case of further development of the directions of researches offered by us we will be able to learn and predict more deeply all history of existence of space objects, and, eventually, and all Universe!
