

Society Egoism, Marasmus and theory of Brownian motion

Short description

In 1905 Albert Einstein created the theory of Brownian motion. In particular He derived the formula for Diffusion coefficient.

Since Collective Human Conscience is Brownian Motion, it obeys the similar equation

$$D = R * T/a * x,$$

where D — diffusion coefficient, R — constant, T — temperature, a — radius of conscience egoism, x — inflexibility of conscience.

Hence, we get the immediate result:

**when $a \rightarrow$ infinity as in the modern world,
then the Diffusion coefficient $D \rightarrow 0$,
ie no exchange in Human Innovations.**

That leads to Stagnation and eventually to Society Marasmus. The perfect examples are Soviet Union, Rome Empire and other Empires.

Another consequence:

**if inflexibility of Conscience \rightarrow infinity,
then $D \rightarrow 0$**

ie one gets Society Stagnation and Marasmus again.
