HYPOTHESIS OF THE ORIGIN OF SPACE WHIRLWINDS

Space whirlwinds (tornadoes, tornado) have the power nature.

HYPOTHESIS OF THE ORIGIN OF SPACE WHIRLWINDS

Space whirlwinds have the power nature!

One of proofs of power character of space whirlwinds are tornadoes on Mars where atmospheric pressure is 160 times less terrestrial and therefore there are no conditions for formation of the thermal streams recorded capacities and speeds of rotation.

Martian tornadoes, as well as their terrestrial "relatives", have arisen not due to the movement of warm air, and owing to vertical power streams which, in turn, create huge electromagnetic fields.

Space plankton and other organisms of a terrestrial origin are brought on the international space station by ocean tornadoes (power streams)!
