

## Two conjectures on the quintets of numbers $(p, p+20, p+30, p+50, p+80)$

**Abstract.** In this paper I make the following two conjectures: (I) there exist an infinity of quintets of primes  $(p, p + 20, p + 30, p + 50, p + 80)$ , where  $p$  is a prime of the form  $6*k - 1$ ; (II) there exist an infinity of primes of the form  $p \backslash \backslash (p + 20) \backslash \backslash (p + 30) \backslash \backslash (p + 50) \backslash \backslash (p + 80)$ , where  $p$  is a number of the form  $6*k - 1$ . I used the operator " $\backslash \backslash$ " with the meaning "concatenated to".

### Conjecture 1 :

There exist an infinity of quintets of primes  $(p, p + 20, p + 30, p + 50, p + 80)$ , where  $p$  is a prime of the form  $6*k - 1$ .

#### The sequence of quintets of primes

$(p, p + 20, p + 30, p + 50, p + 80)$

: (23, 43, 53, 73, 103);  
(59, 79, 89, 109, 139);  
(317, 337, 347, 367, 397);  
(359, 379, 389, 409, 439);  
(389, 409, 419, 439, 469);  
(...)

Note that among the numbers obtained this way there exist quintets formed by four primes and a square of prime or quintets formed by four primes and a semiprime.

### Conjecture 2 :

There exist an infinity of primes of the form  $p \backslash \backslash (p + 20) \backslash \backslash (p + 30) \backslash \backslash (p + 50) \backslash \backslash (p + 80)$ , where  $p$  is a number of the form  $6*k - 1$ . I used the operator " $\backslash \backslash$ " with the meaning "concatenated to".

#### The sequence of primes

$p \backslash \backslash (p + 20) \backslash \backslash (p + 30) \backslash \backslash (p + 50) \backslash \backslash (p + 80)$
