

HYPOTHESIS OF MULTISTAGE SYNTHESIS OF ELEMENTS OF STARS

Nikitin V. N., Nikitin I.V.

Hydrogen and helium – the subsequent product of synthesis of elements of stars.

HYPOTHESIS OF MULTISTAGE SYNTHESIS OF ELEMENTS OF STARS

Statements of scientists that stars conditionally are the objects "filled" by hydrogen and helium are wrong, and, as a result of it, there are no logical theories of emergence of gamma radiation, dzhet and other mysterious space phenomena.

Hydrogen and helium are the subsequent product of multistage synthesis of elements of stars. We claim that initial process of multistage synthesis of stars is synthesis of elementary particles.

Dzheta of black holes and gamma radiation are confirmation of this hypothesis made by us which is in full accordance with exclusive hypotheses of galactic disintegration of our Universe (1) and forming and evolution of galaxies (2).
