Hypothesis – Cosmos modelling using   denoising autoenconder modelling approach

Prado, PF

Dated: 30/01/2017

Hypothesis : one setup or perhaps one or simple association of denoising autoenconders (related to auto-associative neural networks) would be a good analogy to Cosmos better understanding .

Because a signal just like cosmic background radiation [1] occurred in a memristor a promisor building block of denoising autoenconders.
