Given any Set of Numbers, we can slate them all in one (say for example of that of Standard Primes that we know) Prime Metric Basis of Any Higher Order Sequence of Primes using [1], [2], [3] and [4]. We now define the Centroid as the Prime Metric Basis Element corresponding to the average of the Prime Metric Basis Positions (integral or Fractional) of the thusly slated elements of the given Set of the aforementioned Higher Order Sequence of Primes.
