

PHYSICAL BASES OF DIVINE CREATION AND EVOLUTION OF GALAXY «UNIVERSE»

Nikitin V.N., Nikitin I.V., Nikitina N.N.

Description of the process of creation of the world and breakthrough exclusive ideas in the field of cosmology and astrophysics relating to the Divine Universe.

To date, there is no complete unified theory or hypothesis, not only about the processes of the emergence and evolution of the universe, but even of its individual objects and substances. The attempts of scientists to reveal or justify the secrets of the universe have no logical beginning and end, not all are perceived. Even more dangerous are persistent attempts to "impact" on human consciousness with strange theories such as strings, a multitude of measurements, uncertainties, etc. Also persistently and, unprovenly, scientists do not want to leave GOD alone and enjoy its fruits. The above methods of "trial and error" only lead to the efforts of scientists, and also introduce additional chaos into the process of knowing EVERYTHING.

Our Universe is limited and ordered [1], and is one of the Multiverse galaxies.

The initial stage of the galactic evolution of our universe is a limited space with a gravitational shell and a White Hole. The White Hole was the galactic donor of our universe and, ultimately, turned into the Black Hole, as we suppose today. Formation and evolution of galaxies is caused by the process of transformation of the White Hole into the Black Hole. Galaxies arose as a result of the galactic decay of the universe [2]. Galaxies "run up" with acceleration only to the boundary of the universe, and there their movement slows down and, eventually, they disappear.

1. Let there be light! [17]

In the beginning God created the heaven and the earth.

1.1. Creation of the sky - the invisible world

In the beginning, God created the sky out of nothing, that is the spiritual, invisible world or world of angels. To every Christian God gives at the baptism of a guardian angel, who invisibly protects a person all his earthly life, does not leave his soul after death.

1.2. Creation of the earth - the visible world.

After the creation of the sky - the invisible, angelic world, God created from nothing, by His Word, earth, that is, matter (matter) from which our visible, material (material) world was created: the visible sky, the earth and everything on them .

So, at first the God-created earth (matter) had nothing definite, no form, unsettled (like fog or water) and was covered in darkness, and the Spirit of God rushed over it, giving it vitality.

By "earth" here of course the original, still unsettled substance from which the Lord God in six days created then the visible world - the universe. This unsettled substance is called the abyss - darkness for the complete absence of light.

All three Persons of the Most Holy Trinity participated in the creation of the world: the Father, the Son and the Holy Spirit, as the Triune God, the One-Essential and the Undivided. And God said, "Let there be light!" And there was light. And God called the light Day, and the darkness He called Night. And there was evening and there was morning. This was the first day of the world.

2. Exclusive Exclusive Hypotheses in the Sphere of Cosmology and Astrophysics Concerning the Process of Creation of the Divine Universe

2.1. The hypothesis of the existence of the universe "galaxy" [12]

Our Universe is one of the Multiverse galaxies, which is bounded by a gravitational shell. In the center of our universe is the Black Hole.

2.2. The hypothesis of the galactic decay of our universe [6]

The initial stage of the galactic evolution of our universe is a limited space with a gravitational shell and a White Hole. The White Hole was the galactic donor of our universe and, ultimately, turned into the Black Hole, which we have today.

The galactic evolution of our universe is the result of the galactic decay of the White Hole and its transformation into the Black Hole.

2.3. The hypothesis of multistage synthesis of the elements of stars [8]

Hydrogen and helium are the next product of the multistage synthesis of the elements of the stars. The initial process of multistage synthesis of stars is the synthesis of elementary particles.

2.4. Hypothesis of Illusion of the Flat Form of the Universe [7]

Our universe is conditionally located inside the "soap bubble" (the Black Hole) and, therefore, can not be flat.

2.5. And what if the expansion of the universe is an illusion? [3]

The universe is limited and ordered. Galaxies arose as a result of the galactic decay of the universe. Galaxies "run up" with acceleration only to the boundary of the universe, and there their movement slows down and, eventually, they disappear. With this in mind, there is no need for black energy, as its role is performed by gravity. Thus, the expansion of the universe is just an illusion.

2.6. The hypothesis of the boundedness of the universe [9]

The red color of galaxies on the border of the universe indicates their extinction, like sparks from a fire, and, according to some scientists, their "giant" speed of removal from us (almost at the speed of light?) Is just an illusion.

Galaxies on the border of the universe slow down their movement!

Galaxies on the border of the universe, in the end, "dissolve in the void"!

2.7. The hypothesis of the origin of Eridan's Superfood [11]

Eridan's superfood (the "cold spot" of the Universe) is a region of space in the far reaches of the universe. The presence of this "anomaly" is a natural consequence of the "Hypothesis of the limitation of the universe".

2.7. Well, why are you so neat? [14]

The galaxies of our universe are gravitational dipoles, oriented, mainly, in a radial direction to its boundaries.

2.8. The hypothesis of the origin of relic radiation [10]

Relic radiation is a consequence of the ordered motion of "remnants" of decaying galaxies in the energy envelope of the Universe.

This hypothesis does not contradict the existence of the "axis of evil" and agrees with the following hypotheses:

- A) the hypothesis of the boundedness of the universe;
- B) the hypothesis of the appearance of a dark stream;
- C) the hypothesis of the appearance of Eridan's Superfood;
- D) the hypothesis of the nature of white noise.

2.9. The hypothesis of the appearance of a "dark stream" [5]

A "dark stream" is a directed movement of clusters of galaxies relative to relic radiation. The presence of this "anomaly" is a natural consequence of the "Hypothesis of the limitation of the universe".

The existence of a "dark stream" confirms the hypothesis of the limited universe and is a consequence of the presence of an external energy envelope in our universe.

2.10. White Hole "escaped from captivity"! [4]

The horizon of the Black Hole events is the energy envelope of the White Hole.

Initially, in the center of the galaxies was the White Hole. Formation and evolution of galaxies is due to the process of transformation of the White Hole into the Black Hole! The horizon of the events of the Black Hole is the energy envelope of the White Hole!

In Fig. 1 depicts a phased process of ending the existence of the remainder of the White Hole, which "escaped from the captivity" of the Black Hole, which is a clear confirmation of this hypothesis!

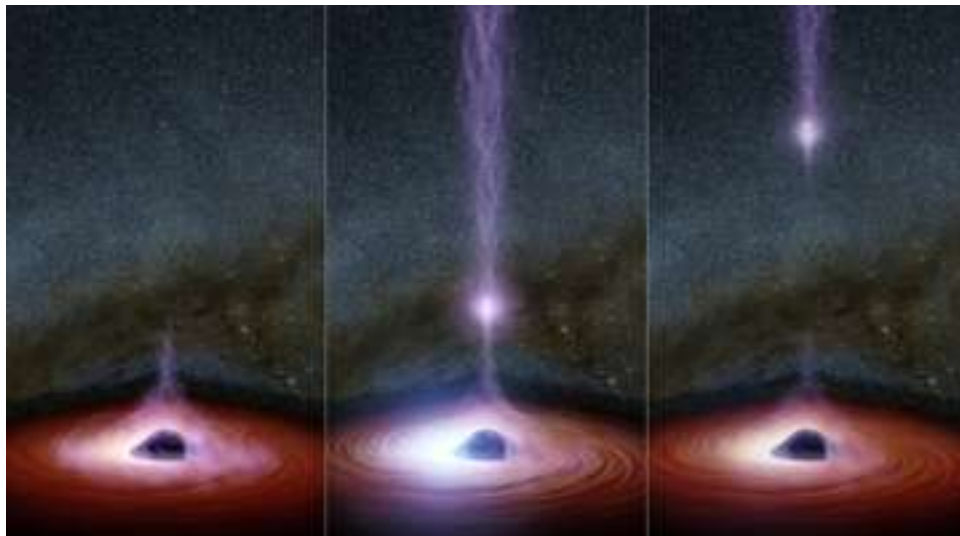

Fig. 1.

2.11. Another example of the limitations and orderliness of the universe [13]

At present, scientists discovered the boundaries of the universe, which manifest themselves in the form of numerous bright flashes (explosions) on its outskirts. This phenomenon can be observed even with an unaided eye.

3. We, too, are all-embracing, and we are also from God!

3.1. About how the planet was "populated" [15]

"Population" of the Earth began from the poles!

The temperature at the surface of the Earth is determined by the total thermal effect of the Earth (internal) and the Sun (external), so the temperature is always higher at the equator than at the poles.

During the evolution of the Earth, the temperature at the poles dropped to the optimum value for the origin of life, but remained too high at the equator.

Subsequently, the poles were cooled, the zone of optimum temperature shifted closer to the equator, and hence

"life," as we believe today.

The present warming is just a temporary phenomenon, which is determined by the energy state of the outer space of the solar system moving in the Milky Way galaxy, and that, in turn, to the outskirts of the universe.

A global cooling on the Earth is inevitable!

3.2. So how much longer do we have to "unwind" the term of God? [16].

The surface of the Earth is the location of one of the colonies of godlessly obedient individuals of the Universe!

The earth is one of the harshest and "homeless" places in the universe, well, just plain hell! We are constantly worried about cataclysms, we are threatened by asteroids, UFOs, "glacial periods" and "ends of the world"!

God shackled the disobedient earthlings into "shackles" to shield them from God-observing universes, and placed them on the surface of the Earth, where all sorts of cataclysms are raging: droughts, colds, floods, cosmic threats and so on. It is quite another thing - a paradise life inside the planet, where the core turns into an artificial sun, and the mantle gives way to an artificial atmosphere.

And then dreams come true of a paradise life, where eternal summer, always light, flowering and fruitful gardens, there are no cosmic threats, love reigns everywhere, there is no theft and drunkenness, where everyone is one family, brothers and sisters.

We are sure that our Universe is alive! Alas, "they", perhaps, just send us a UFO for exploration - did not we do something superfluous? Nobody in the Universe wants to communicate with us! They would send at least some news!

Conclusion

Our limited and ordered universe is one of the Multiverse galaxies.

Our Milky Way Galaxy is moving away from the Universal Black Hole with acceleration, while it seems to us that all the galaxies are fleeing from us in different directions, but we, thank God, have dealt with this issue.

It's interesting to note that we can be visited by homeless galaxies (planets) - outcasts who are still "speculating" where they should attach themselves: whether to fly to the "Hole", or to get out on "freedom" - to the neighbors-multiverse. In the end, all the galaxies will "get attached" to something and our Universe will become orphaned.

This is how illusions arise that the sky is everywhere black, and that we are in the center of the universe, and all galaxies are escaping from us in different directions, and then disappear in pitch darkness!

The results of fundamental theoretical researches stated by us are a logical completion and crown of the fundamental and interconnected hypotheses of the structure and evolution of our Universe that we have created. Let's no longer be afraid of the Big Bang, mystical strings, inflation and additional dimensions. Let's use effectively and competently all that we know and know how!

We have proposed only some fragments of the scientific backlog created by us, and, in the case of further development of the proposed research direction, scientists will be able to better understand the history and predict the future of our planet and the entire universe!

If we have not disclosed at least one of the most important secrets of the universe, then at least, significantly brought humanity closer to its solution. We are sure that we are on the right path - the "path" to the knowledge of everything and suggest moving along it together!
