

VICTIM OF THE COMETARY FLOOD

Nikitin V.N., Nikitin I.V.

Atlantis – the victim of the Flood of the cometary origin finishing Ice Age.

VICTIM OF THE COMETARY FLOOD

Будет шуметь вода, будут лететь года,

И в белых туманах скроются черные города

Юлия Друнина,

песня из к/ф «Человек-амфибия»

There are no doubts in existence of Atlantis today. Now the hypothesis of death of Atlantis as a result of formation of a crack in the Atlantic Ocean where the island Atlantis has fallen dominates. We offer an exclusive hypothesis of the reason of disappearance of Atlantis.

Hypothesis: Atlantis – the victim of the Flood of the cometary origin finishing Ice Age.

The main responsible for a flood – a comet under Long's name. An object of Solar system of Long, like Mercury, is the rest of the former comet which has brought water to Earth. A great flood – a real event which many ancient legends confirm. There is enough information to describe the period and a format of this event. First of all, it is the program Google Planet which gives the huge volume of material about the surface of the planet. Secondly, emergence in the 21st century of reliable data about climate of Earth and structure of her atmosphere for the last 400000 years. The research of the cores of ice received at the East station in Antarctica also answers many questions.

Data on the Great flood:

1. Start date of a flood: 9972 ± 300 BC.
2. Sea level after a flood: plus 174 ± 10 m
3. Sea level to a flood: minus 180 ± 20 m
4. Direction of wind: southeast
5. Duration of heavy rains: 40 days (Old Testament)
6. Increase in water level: 150 days (Old Testament)
7. General rising of water: 354 ± 30 m

The stated hypothesis is exclusive attempt to coordinate among themselves a chain of the defining events of the past and future of Earth taking into account the ancient writing and modern scientific hypotheses.
