

THE BIG ILLUSION OF THE BIG BANG

Nikitin V.N., Nikitin I.V.

Our Universe is limited and ordered. Galaxies have arisen in the course of galactic disintegration of a universal White Hole and move to suburbs of the Universe.

THE BIG ILLUSION OF THE BIG BANG

Prick the evil to stop, take away all books yes to burn!

Griboyedov A. S. "Woe from Wit"

The hypothesis of expansion of the Universe is a basis of the theory of the Big Bang, but observations of thousands of galaxies call into question fidelity of modern idea of origin and evolution of space. The new research Eric J. Larner from the Lawrenceville Plasma Physics company presented in the Monthly Notices of the Royal Astronomical Society magazine has shown that any of the forecasts based on model of the extending Universe actually doesn't correspond to observations. Instead work has revealed almost full coincidence of observations to forecasts of a hypothesis opposite to the extending Universe in which it is said that the space doesn't extend, and the red shift of light is caused some other, by unknown process now. Our exclusive hypothesis explains a phenomenon of red shift of light. Our Universe is limited and ordered. Galaxies were created in the course of galactic disintegration of a universal White Hole and move to suburbs of the Universe. Red color of galaxies on border of the Universe is indicated their fading, like sparks from a fire, and, according to a number of scientists, by their huge speed of removal from us (almost with velocity of light) – only illusion. Galaxies on border of the Universe slow down the movement! As a result of the galaxy on border of the Universe are dissolved in space of Nothing!
