## **Abstract**

This file proposed a concise Chinese characters alphabetical solution. This solution contains all common Chinese characters. It has about 3,800 characters, and they are much easier to learn than traditional simplified Chinese characters. It has both the advantages of Chinese and English. It also uses square shape characters, but a character contains both pronunciation and meaning. Every character contains only 2 or 3 letters. The stroke count of new characters is much less than traditional simplified Chinese characters, and it will be much easier to write characters. In order to distinguish homophones, most characters have a meaning code. Some meaning codes are used for specified sort of characters.

In order to build new square shape characters, this file proposed a new letter form: tinycase. A character can be composed of one uppercase letter and one lowercase letter, or one uppercase letter and two tinycase letters.

**Key words:** Chinese characters alphabetical, tinycase, square shape character

𦰵	ymz	ym2 yín	z	silver	银

### Example 3

### 2. Alphabet

Just like English, there are 26 letters also. English letters have two cases: uppercase and lowercase, but in this solution there is one more case: tinycase. And some tinycase letters have more than one form. For example: tinycase of A has 3 forms, tinycase of M has 2 forms.

The lower case of letter W also has 2 forms.
