Recently we have made the prognosis of such terrestrial events for the period between April 22 and May 2, 2019. This forecasting is confirmed. Now we do the same prognosis for the next 2 weeks, from May 19 until June 2, 2019.

During this period new great catastrophes are expected to occur on our Earth.

In our days, we see from Fig. 1 that the dangerous area lies between May 19 and June 2, 2019.

(Addition: earthquakes 6+ are noted as circle's, earthquakes 7+ as ellipsis and volcanic eruptions as crosses).

So, the people of seismic zones:

BE CAREFUL!
