

PROGNOSIS OF EARTHQUAKES AND VOLCANIC ERUPTIONS ON DAILY INDEXES OF SOLAR

ACTIVITY FOR FEBRUARY 2020

A. M. EIGENSON, I. B. BAZYLEVYCH

Ivan Franko Lviv National University, Lviv, 79000, Ukraine, Universytetska Steet, 1.

According to our investigations [1-3], when the curve of daily solar activity W begins to go down, in the vicinity of its minimum the earthquakes and volcanic eruptions occur with large probability. In the last year (2019) we have made 3 forecastings of these terrestrial events for spring and summer 2019. Now we present the same prognosis for February, 2020. The area of the alarm will be from February 2 until February 14 (mag be, even more longer).

So, we ask the citizens of the seismic dangerous contains: BE CAREFUL!

Sincerely yours, Aleksey Eigenson and Iryna Bazylevych.
