The Assumption Of S. Virgin Mary -Written in Cairo – Egypt –13th April 2020

Abstract

During December 2012 – there was a prediction for some great Earthquake will hit the Earth- this story is forgotten Now... But... I have found a similar earthquake in the solar system history –and I claim the Moon Creation is done based on it –

"Mars Immigration Theory Summary":

- Mars original orbital distance was 84 mkm. and Mars had immigrated from it to its current orbital distance 227.9 mkm
- Through Mars Motion from 84 mkm to 227.9 mkm, Mars had collided with Venus and then Mars had collided with Earth also.
- From the Collisions debris Earth Moon was created –and Mars had found its moons. And the rest debris was attracted by Jupiter and created **The Asteroid Belt**

The Giant-impact hypothesis is in consistency with **Mars immigration theory**

But

- Instead of the (Supposed Planet) **Theia**, Mars itself made the collisions- and caused the Earth –Moon Creation -

Mars Immigration Theory solves The difficulties of **Giant-impact hypothesis**:

- Why Venus Has No Moon?** – Because Mars moved from 84 mkm to 227.9 mkm and pushed all debris in its motion direction – **far from Venus** – but Earth has greater Mass and the debris lost their motion high momentum – so Earth could attract some debris and create its moon
- The Lunar Magma Ocean (LMO) Origin– is Venus** – because the moon is created by 3 planets debris (Venus – Earth – Mars) – So their rocks are found in it
- Why The Iron Oxide (Feo) of the Moon= (13%)? Because** The rate (13%) is a middle between Mars rate (18%) and the terrestrial mantle (8%).
- Why Mars diameter (and Mass) are decreased through the history? Because** of the collisions – Mars diameter lost around (5%) (and Mars mass also which causes difficulties for Mars gravitation equation)
- The Greatest Earthquake** is occurred because **of Mars & Earth Collision** – But – Why Mars was immigrated? **Because of The Sun Creation Process** – Can such Earthquake be occurred again? It depends On The Sun Life Cycle

(A Conclusion: Giant-impact hypothesis supports Mars Immigration Theory)

1- Introduction

December 2012 had many mysteries

(1st) this image is seen frequently on media predicting that on 3rd December (Mercury- Venus- Saturn) will be perpendicular on the 3 Great Pyramids Heads – which is a cycle repeated only once each **2737 years!**

(2nd) Mayan Calendar long Cycle continuous for more than 5000 years – is completed on 21st December 2012 – someone told the pyramids works as an O'clock for Mayan Cycle!

(3rd) A prediction for the greatest Earthquake hit the whole Earth was spreading for months before December 2012!

Nothing happened and every thing is forgotten now

I have studied the solar system Geometry from this date (November 2012) till now trying to know what truth behind all these mysteries

Mars Immigration Theory provides a very similar earthquake

And

Mars Immigration theory is supported strongly by the "**Giant –Impact Hypothesis**" in addition to many other proves –

So what we still need to know is:

- Why Mars had immigrated from its original orbital distance (84 mkm) to its new current one (227.9 mkm)? i.e. **What event had caused Mars immigration?**

My answer is that

The Sun Creation Process had forced Mars to immigrate.

This answer causes even more difficulties –it tells us – Mars Displacement from the Point (84 mkm) to the point (227.9 mkm) depends on **The Sun Life Cycle**

i.e.

Mars Displacement is NOT a motion in one direction but it's **Go & Return Motion** – i.e.

If (really) the sun creation process caused Mars to immigrate from its original orbital distance – that means – some (serious) change in the sun may cause Mars to return to its original orbital distance (and collide with Earth Again) – that's **The Earthquake.**

Paper Objectives:

(1st) to prove that Mars was immigrated because of the sun creation

(2nd) to prove that the Cycle 2737 years is related to the sun life cycle

Paper contents

3- Mars Immigration Theory proves Discussion

4- The Sun Creation process forced Mars to immigrate

(Please review **Is the 2737 Phenomenon a real one (II)** <https://vixra.org/abs/1908.0583>)

PLANETARY ALIGNMENT WITH THE GIZA PYRAMIDS,
IT ONLY HAPPENS ONCE IN 2,737 YEARS

1 **2- Methodology**

2 Why Jupiter diameter =142984 km? Why we need to answer such question?

3 I use the planets data analysis in my study for the solar system geometry – I try to test
4 our vision toward the solar system creation and Motion –

5 So – in my research – clearly – I compare between the planets data and the physics
6 acceptable theories to see if there's a consistency between both

7 Why Jupiter diameter =142984 km? is a question has no clear answer – the diameter
8 creation is attributed to different (unknown) historical circumstances & records ...

9 Based on that:

10 (1)

11 If Jupiter diameter =142984 km = 8 planets diameters total – such data – has no any
12 geometrical effect in the solar system understanding – the data simply is found by
13 pure coincidence...! Also

14 (2)

15 If Jupiter diameter 142984 km x 5040 = 720.7 mkm (Mercury Jupiter Distance)

16 Where Mercury Day needs 5040 seconds to be =176 solar days and Mercury moves
17 during its day period (175.94 solar days) a distance = 720.7 mkm – or

18 (3)

19 If Jupiter diameter 142984 km = 1 million km /7 where Mercury orbital inclination
20 =7 degrees and 1 degree = 1 mkm because Mercury orbital circumference =360
21 degrees = 360 mkm

22 Such data also gives us no better understanding for the solar system...
23

24 **How The Matter Is Created?** the ancient question – is removed from the book – and
25 we accept that the matter is a continuous miracle found without an explanation!

26 That's why I use the planets data to discover the solar system geometry ...

27 I accept the historical records about how the planet is created if there's **a proof**– For
28 example – a person had an accident and his arm was cut in this accident – So can this
29 person still have 2 arms Now? We need a proof for the historical record
30

31 **About what we argue here?**

32 The person has lost his arm but still can live... the planet has changed its data but still
33 can revolve around the sun! the person personality is still (almost) the same – and the
34 planet still can do its geometrical role-
35

36 The person is not a body- And – **The Planet Is Not Just A Matter**

37
38 That's why I ask – why Jupiter diameter =142984 km? because we try to discover the
39 geometrical power which is found behind the planet diameter creation!
40

41 **Earth Circumference = the (5) inner planets diameters total! Why...?**

42 The planet is NOT just a matter – **The Matter Is Created By A Geometrical**
43 **Powerful Hand** - the matter is created as one player in a team – with the space – the
44 time –the energy – the motion – many other players –

45 BUT

46 If the person is over-bleeding – he will die and his personality will be disappeared

1 The body is the main key behind which the human power is hidden
2 The planet matter is the key behind which the geometrical great power is hidden
3 That's why we ask **how the matter is created?** can Kepler help us?

4
5 "Kepler thus assumed that the volumes of the planets were proportional to their
6 distances to the sun and the quantity of matter they contained to the square root of
7 this distance, so that **planetary densities varied inversely** as square root of the
8 orbital radius and is this ad hoc way be could reproduced his third law (T^2 varies with
9 a^3) and absorb into physical Astronomy" "From Eudexus to Einstein A history of
10 Mathematical astronomy"(page 198-199) C.M. Linton–Cambridge university Press...

11 **Deep Discussion**

12 Why the planet density is changed relative to its orbital distance?!

13 Kepler – Since hundreds of years- told that – the solar system is one building and
14 each planet is a part of this same building – or

15 The solar system is one machine and each planet is a gear of this same machine...

16 **We don't like this idea! Why?**

17 Because our eyes see the planets are separated matters from each other- we consider
18 that- Where the space separates the planets from each other – so they are
19 **independent planets (matters)!** – Our eyes see by this way and refuse to understand
20 any other idea –So we see **the mirage and believe it's a real water**

21 What if we wrongly see this vision? Let's test it – do we know what's the space? How
22 the space is created or from what stuff? The naïve vision tells us –the space is the
23 nothingness – and found without creation!

24 Kepler told - Planet matter is created based on geometrical rules- it's Not the Big
25 Bang description (Why? because it's NOT **The Random Creation Concept**)

26 The planets were created (as parts of the same one building – which necessitates to
27 create these planets data depending on each other –and because of that the data shows
28 this dependency)

29 Based on this explanation – can the planet diameter (matter) is created in relationship
30 with Planet orbital distance (Space)? i.e the matter and Space are created with
31 specific rates to each other to do one geometrical job, Can that be possible?!

32 Lorentz Length Contraction Phenomenon tells the answer! Why?? **BECAUSE**

33 Lorentz Length Contraction Phenomenon deals with a Particle length as a distance –
34 both are contracted by high velocity motion!

35 ***As if the matter (a particle length) is equivalent to the space (a distance)***

36 So the ancient question- how the matter is created- was not negligent completely –
37 but there are different tries accumulate the knowledge to support our investigation.

38 Shortly

39 The Planets Data analysis is a way to test our ideas and review our visions to know if
40 we see the real water or just a mirage.

41

1 **3- Mars Immigration Theory proves Discussion**

2 (1st proof) The Giant –Impact Hypothesis (The Geological Proves)

3 (2nd proof) Planet diameter & orbital distance relationship (Planets Order Analysis)

4 (3rd proof) Planet effect on its neighbor

5 (4th proof) Mar Immigration Motion Direction

6 (5th proof) Mars Immigration results (Mars Diameter decreasing – Asteroid belt Creation)

7
8 **(1st proof) The Giant –Impact Hypothesis (The Geological proves)**

9 As the paper abstract shows how Mars theory is in consistency with The Giant-
10 Impact hypothesis – also Mars immigration theory answers many basic questions face
11 the giant –impact hypothesis –as we have discussed– why Venus has no moon? the
12 theory solves it– because Mars Motion was from the point (84 mkm) to (227.9
13 mkm)– so the direction of Motion is defined - and Mars Motion pushed all debris to
14 move with Mars that made a wave pushed all debris far from Venus – So Venus
15 Couldn't create a moon for it. then these debris lost their high motions momentum
16 when reach to Earth position and because Earth mass is greater than Venus – Earth
17 could attracted some debris and created from them its moon – Now Mars Moons
18 supports this same description because Mars with small mass could attracted 2 moons
19 – How? Because the debris high momentum is lost already, and its motion became
20 so weak even Mars could attracted its moons – the rest debris was attracted by Jupiter
21 and created the asteroid belt.

22
23 Please review **The Giant –Impact Hypothesis** -

24
25 **(2nd proof) Planet diameter & orbital distance relationship (Planets Order Analysis)**

26 Mars immigration theory is born basically based on the planets order analysis

27
28 The planets order analysis shows real puzzles ... for example

29 (*Mercury – Venus – Earth*) this order of planets shows an order in planets diameters,
30 masses and orbital distance – (the order rule is – **A Greater Diameter Or Mass Needs**
31 **A Greater Orbital Distance**) if this order controls all planets so Mars should be the
32 second planet after Mercury - But –

33 (*Jupiter – Saturn –Uranus – Neptune – Pluto*) the outer planets order shows that the
34 rule depends on planet diameter (and not mass because Uranus Diameter is greater
35 than Neptune but less Mass) and the rule is reversed from the previous one i.e. **A**
36 **Greater Diameter Needs A Shorter Orbital Distance** – this analysis refers to that Mars
37 may be found in a wrong position in the planets order and this wrong position causes
38 a disturbance for the planets order – based on this analysis Mars immigration theory
39 can be concluded ... to get **the correct answer** we need to know if **There's A Real**
40 **Relationship Between Planet Diameter And Orbital Distance.** – which we should
41 discuss in more details in next point (No. 4)

42
43
44
45

1 **(3rd proof) Planet Effect On Its Neighbor**

2 I claim any planet effect on its neighbor

3 **Example**

4 687 days (Mars orbital period) = 365.25 days (Earth orbital period) x 1.9

5 687 days (Mars orbital period) = 27.3 days (The moon orbital period) x 25.2

6 But 25.2 degrees = Mars axial tilt and 1.9 degrees = Mars orbital inclination

7 Also 25.2 deg (Mars axial tilt and) = (1.9 deg. Mars orbital inclination) x 13.18 deg.

8 Where

9 The moon motion degrees daily = 13.18 degrees

10 We should not limit our discussion for just Data consistency – let's see its depth

11 Because

12 Mars moves per solar day = 0.524 degrees (=360 degrees /687 days)

13 The value 0.524 degrees = (1/1.9) where 1.9 degrees = Mars orbital inclination

14 That means

15 Mars Data (25.2, 1.9, 0.524 ...etc) depends on the solar day period of time

16 This point still needs more analysis

17 **The direct conclusion is:**

18 ***There's an effect from Earth and Moon on Mars Motion (their neighbor)***

19 Can we prove this effect?

20 Jupiter also effect Mars Data – by the same method

21 **4331 days (Jupiter orbital period) = 687 days (Mars orbital period) x 2 π**

22 Based on that If we find an effect of Mercury data on Mars – can that support Mars immigration theory?

24 But if Mars is immigrated, why (as supposed) mercury still have effect on it? If the Earth Moon is created by some debris from Mars, Venus & Earth, can the 3 planets effect on the Moon Motion? (planet diameter & orbital distance may answer)!

27

28

29 **(4th proof) Mar Immigration Motion Direction**

30 There's one known motion in the solar system which is the planets revolution around the sun – but Mars immigration Motion is a different direction from the revolution around the sun- in more clear words – this motion corresponds to the light motion direction which is sent from the sun to Mars current Point (227.9 mkm)

34 Such motion direction is unknown in the solar system

35 But

36 This motion same direction we have found in Jupiter Energy analysis which shows that there's some motion (for energy from Jupiter Toward Pluto)

38 That tells – Mars immigration Motion direction is not unusual Direction – on the contrary –

40 Please review Jupiter Energy analysis

41 **The Giant-impact hypothesis supports,, Mars Immigration Theory,, (III)**

42 <https://vixra.org/abs/2003.0521>

43

1 **(5th proof) Mars Immigration results which are:**

2 **1- The Earth Moon Creation**

3 **2- Mars Moons Creation**

4 **3- The Asteroid belt Creation**

5 **4- Mars diameter Decreasing (5%)**

6 **5- Mars Mass Decreasing (5%)**

7
8 Simply we have a reason to answer why Venus has no moon but Mars (mass =1/13)
9 has 2 moons?!

10 The fact shows itself clearly – there were no debris around Venus to create a moon
11 for her! Why? but mars has!? Why? because of the Motion Direction

12 Imagine a car moves from the point 84 mkm to 227.9 mkm –so the car creates a wave
13 pushes all debris in the same motion direction

14 That's simple and acceptable explanation...

15
16 **Simply – again – the fact shows itself**

17 The gravitation equation works correctly only with Jupiter and Saturn where...

18
19 $((\text{Saturn orbital distance})^2 / (\text{Jupiter orbital distance})^2) = (\text{Jupiter Mass} / \text{Saturn Mass})$

20
21 If Mars Mass is increased with 5%.....So

22
23 $((\text{Mars original distance } 84 \text{ mkm})^2 / (\text{Mercury orbital distance } 57.9 \text{ mkm})^2) = (\text{Mars}$
24 $\text{Mass} / \text{Mercury Mass})$

25 Also the gravitation equation tells us that, Mars orbital distance was 84 mkm – Mars
26 was the Mercury neighbor and had to immigrate from its original orbital distance

27 Why had to immigrate? (this will be discussed in point No. 6 of this paper) but now
28 let's analyze Mars displacement 144 mkm...

29

30

1 **4- The Sun Creation process forced Mars to immigrate**

- 2 4-1 the chronological description
3 4-2 The Sun Creation causes Mars Immigration (proves)
4 4-3 the Cycle 2737 analysis
5

6 **4-1 The Chronological Description**

- 7 It's know that the Earth is older than the sun
8 Also
9 The moon geological analysis shows that the Moon rocks are created by the three
10 planets (Venus – Earth –Mars)
11 That simply tells us – Mars immigration date was Parallel to the sun creation process
12
13

14 **4-2 The Sun Creation causes Mars Immigration (proves)**

15
16 **4-2-1 Venus Diameter Analysis**

- 17 - Mars Axial Tilt = **25.2** degrees (on the horizontal level)
18 - Mars Axial Tilt = **115.2** degrees (on the vertical level $115.2 = 25.2+90$)
19 - Mars Axial Tilt = **205.2** degrees (where 205.2 degrees = $115.2 +90$)

20 But

- 21 - Saros Shift angle = 115 degreesAnd
22 - Saros Cycle 6585.39 days = $115 \times (180/\pi)$

23 **Why Venus diameter is so specific one? And why there's a strong relationship**
24 **between Venus & Mars Diameter?**

25 **Because**

- 26 - **The sun diameter = 115.2 x Venus Diameter**
27 - **The sun diameter = 205.2 x Mars Diameter**
28

29 The previous data refers to some relationship between the sun diameter on one side
30 and Venus & Mars diameters on the other Side
31 That can be only happen if the sun diameter is created relative to both
32 Which may support the claim that the sun creation was the reason for Mars
33 immigration process -
34

4-2-2 Mars Axial Tilt =25.2 degrees

(1)

Kepler Law tells that $(P^2/d^3 = \text{Constant}) -$

P : The Planet orbital period

d : The Planet orbital distance

The constant =25

Table No.1				
Planet	P^2	* 25	$= d^3$	Error
Mercury	$(88)^2$	*25	$(57.9)^3$	0.2%
Venus	$(224.7)^2$	*25	$(108.2)^3$	0.3%
Earth	$(366)^2$	*25	$(149.6)^3$	0
Mars	$(687)^2$	*25	$(227.9)^3$	0.3%
Jupiter	$(4331)^2$	*25	$(778.6)^3$	1.4%
Saturn	$(10474)^2$	*25	$(1433.5)^3$	1%
Uranus	$(30589)^2$	*25	$(2872.5)^3$	1.3%
Neptune	$(59800)^2$	*25	$(4495.1)^3$	1.5%
Pluto	$(90588)^2$	*25	$(5870)^3$	1.4%

The constant =25 – if this constant depends Mars Axial Tilt – that shows an effect of Mars is practiced by the sun herself..

(2)

Note please (this is Not pure coincidence) because

Mars (current) orbital circumference =1433.5mkm

= Saturn Orbital Distance

= Saturn Uranus Distance

= Pluto eccentricity distance

= Uranus orbital distance /2

= Neptune orbital distance / π

= Mercury Jupiter distance x 2

The previous data tries to shows – Mars Data defines some general direction for the solar planets data – that explain why Mars axial tilt is used in Kepler law as a constant – this approach should be compared with the previous analysis for Venus Diameter which shows a deep effect of Mars axial tilt in the solar system geometry

For more deep analysis for Venus & Mars Diameters – Please Review

Can Titius Bode Law Disprove Mars Immigration Theory?

<https://vixra.org/abs/2004.0292>

Note Please

The sun synodic period =27.27 days (very similar to the lunar sidereal month)

The sun sidereal period = 25.38 days (Mars axial tilt =25.2 degrees – if this value is used in days it will be =99% of the sun sidereal day)

1 **4-2-3 The Sun Creation causes Mars Immigration (proves)**

2 The sun creation discussion is so hard one basically because of the following:

3
4 - While the current science attributes the sun rays energy to nuclear interaction
5 found inside the sun- I claim that-the sun rays energy is found by Planets Motions
6 Energies Total

7 i.e.

8 - The Planets Motions Energies Are Accumulated To Produce The Sun Rays –
9 based on that – the mechanical waves of planets motions will be transferred into
10 light waves – this is done by change the rate of time – let's try with details

- 11 ○ The solar planets move a total distance per solar day =17.75 mkm
12 ○ The sun rate of time (as I claim) =(1/365) of Earth rate of time – means – 1
13 day on the sun = 1 year on Earth
14 ○ So the distance =17.75 mkm per solar day (on Earth) but per 237 seconds
15 on the sun – this velocity will be 0.25 C (a quarter of light known velocity)

16 But

- 17 ○ Jupiter energy as have discussed frequently before uses the Value **4 C**
18 ○ So $0.25 C \times 4 C = C^2$ (this is the energy source of the sun rays)

19
20 This is my idea about the sun rays creation

21 Now

22 If Mars had immigrated from (84 mkm) to (227.9 mkm) – that means – Mars moves
23 longer distance – the time isn't important because the sun uses a different rate of time
24 The distance is the important – longer distance means more energy and that support
25 the sun creation

26 The previous story is my try to explain the data –

27 Any way the sun creation process depends on 627 mkm (Earth Jupiter distance)

28 To know why this distance is so important – we need to define what's the space? And
29 to know if (really) the space is created of Energy and then to explain if the space has
30 different capacities of energy – and based on that we need to know if there are
31 different densities of energy in the space! This is complex discussion

32 **627 mkm (Earth Jupiter Distance) =144 mkm (Mars displacement) x**
33 **4.37 mkm (the sun Circumference)**

34 This is the equation by which mars effect on the sun creation process

35 **Please Note**

36 Earth Jupiter distance is so complex distance to be understood!

37 $6939.75 \text{ seconds} \times 0.3 \text{ mkm/s (light known velocity)} = 2090 \text{ mkm (Jupiter Uranus Distance)}$

38 $2090 \text{ seconds} \times 0.3 \text{ mkm/s (light known velocity)} = 627 \text{ mkm (Earth Jupiter Distance)}$

39 Where

40 $6939.75 \text{ days} = \text{Metonic Cycle}$

41

42 We need to know if there are different densities of Energy in the space to conclude
43 that the (first) sun energy is created depending on this distance!

44

1 **4-3 The Cycle 2737 analysis**

2 The Cycle 2737 years is a cycle depends on the Earth Moon Motion

3 Because of that

4 The 3 planets (Mercury – Venus – Saturn) were perpendicular on Earth (on the
5 pyramids heads) – this Motion Trajectory is the moon motion trajectory and the three
6 planets follow the moon motion...!

7
8 **I-Data**

9 (1)

10 2736 years = 144 x 19

11 (2)

12 **2737 = 627 mkm (Earth Jupiter Distance) x 4.37 mkm (the sun circumference)**

13 (3)

14 **2737 = 144 mkm (Mars Displacement) x (4.37 mkm)²**

15 (4)

16 2737 years = 2736 years +1 year

17 (5)

18 6939.75 days (Metonic Cycle) = 6585.32 days (saros Cycle) +354.39days (synodic
19 year)

20
21 **II-Discussion**

22 Equations No.2 & 3 shows that the Cycle 2737 years depends basically on (Mars
23 Displacement) and (The Sun Circumference)

24
25 The Cycle 2737 is clearly related to the Sun Creation process – just the proving
26 difficulties are found in the sun energy source – this conflict point prevents the
27 proving process to be more strong...

28
29
30 **Why Mars may return to its original orbital distance (84mkm)? What
31 push it to do that?**

32 Because the planet orbital distance is defined based on its diameter basically

33 So Mars diameter defines the orbital distance to be (84 mkm) and not (227.9 mkm)

34
35 Planet diameter and orbital distance relationship is discussed deeply in the previous
36 paper please read it
