The objective of this paper is to initiate a study relative a mathematical modeling of coronavirus contamination, knowing firstly some current numbers, given by COVID-19 pandemic.

Initiating with data of 20 countries and total values relate to the world, is possible to note that the United States of America is the worse country with relation to the current coronavirus contamination (COVID-19). Probably United Kingdom is not providing correctly your data on recovered patients, with regularity, because your lethality coefficient of type 1 is abnormally high: 96.42 %.

For table 1 we are defining

Resolved Cases = Death + Recovered Cases,

Lethality % 1 =  $100 \times \text{Death} / \text{Resolved Cases}$ ,

Lethality % 2 =  $100 \times \text{Death} / \text{Confirmed Cases}$ .

Considering Lethality % type 1, Korea South (2.70 %), Israel (3.11 %), Germany (4.99 %), China (5.60 %), Iraq (6.67 %), Iran (7.72 %) and Russia (9.95 %) have the lowest lethality rates in Table 1, less than 10 %.

Considering Lethality % type 2, Russia has the lowest lethality rate (0.90 %) and France the worst (13.91 %).

Portugal is bad about the type 1 percentage (41.02 %), but moderately well with respect to the type 2 percentage (3.75 %).

All primary data was extracted from the Johns Hopkins University website.

Type	Confirmed Cases	Death	Recovered	Resolved Cases	Lethality % 1	Lethality % 2
