

## Abstract

This paper is written mostly for developing countries like India. Even developed countries may also implement some of the reforms proposed by the author. By birth all are equal. Nature has provided all resources. In some nations like the USA, Canada, UK, Norway, Sweden, Denmark, Holland, many of the European Union, all the Gulf countries and maybe in some other nation's people do live above the poverty line. These are all developed countries. In developing countries, still people are struggling to meet their needs. Also, these masses are facing social injustice, all kinds of suppressions, corruption, unemployment, etc. Keeping these problems in mind, the author introduces some economic and administrative reforms for immediate implementation.

Keywords: New Economic & Administrative Policies

***Note: The author will propose ways and means to implement these policies.***

### ONE

The village agricultural laborers and workers will be paid by the government. Yes, here after, they are government employees. Each male and female will get Rupees 500 and Rupees 300 respectively per day. Strict rules and regulations will be formulated for the proper and neat functioning of this ambitious plan. 50% of the wages/salaries will be paid by the respective land owners. The remaining 50% OF THE MONEY WILL BE MET BY THE GOVERNMENT.

In this scheme, both the employer and employees are fully benefited. This scheme provides honor and respect to the village agricultural laborers. The successful implementation of this scheme is really a rural revolution. The statistics reveals that nearly 80% of the Indian population lives in villages. Out of this 80% , nearly 65% are agricultural laborers. Currently, these masses are exploited by the landlords. In northern states like Uttar Pradesh, Madhya Pradesh, Rajasthan and Bihar the livelihood of these employees are very poor. They do not have proper homes, they are facing severe shortage of water to drink, cook and bathe. Most of these poor agricultural children are unable to go to schools for education. In some states, these masses are treated like Roman slaves and they are not allowed to enjoy freedom. This state of affairs should be CHANGED. So, this program is timely, important and inevitable.

The immediate implementation of this program will solve some of the burning problems of rural areas.

## **TWO**

- 1) The government will aid a sum of Rupees 2000 per month for each and every senior citizen.
- 2) Each and every senior citizen can travel in local buses freely one time. I.e from point A to point B and from point B to point A.
- 3) The government should feed these senior citizens freely.
- 4) The government must aid a sum of 10000 Rupees for the family of a deceased senior citizen to meet the funeral expenses.

### **THREE**

- 1) Each unemployed graduate will get an aid of 5000 Rupees per month; and an unemployed post graduate will get an aid of 7500 Rupees per month.
- 2) The unemployed youth will get from 5 lacs to 10 lacs Rupees FREE OF INTEREST to start a business.
- 3) The government will donate a sum of Rupees 20000 for each unemployed graduate and post graduates for their marriage.

### **FOUR**

- 1) The government will supply monthly freely for ration card holders SUGAR, TEA, COFFEE, WASHING SOAPS, and BATHING SOAPS AND TOOTH POWDERS.
- 2) The government will give to each and every citizen 5 Kg. Kaarams like mixture and Murukku and 5Kg. Arabian DATES per month.
- 3) The government will deliver the above mentioned items to the ration card holder's houses directly, regularly, and properly. The people need not come to ration shops and stand in a queue for hours.
- 4) The government will offer an amount of 1000 Rupees to every ration card holder per month towards COOKING gas cylinders

### **FIVE**

- 1) 50% reservations for females in private and governmental jobs.

- 2) According to Shastra, the women and young girls are called Sakthi. Without Sakthi there cannot be creation. So, women and girls SHOULD be respected in the society. They are not slaves, cooks, baby production machines or subordinates. The government will make necessary steps to full equality and due respect for them.
- 3) In all government and private firms normally S/o is currently followed. Similarly M/o of so and so should be put in practice.
- 4) The government will encourage by making sufficient laws and practices to encourage second marriages for widows and divorced women.
- 5) The government will see to it not to make fun of these women by the society. These women will be honored and respected.
- 6) The above said women must be given preference for state and private employment.
- 7) If a person marries a widow, he must be offered a suitable government job.
- 8) 50% of MAL and MP constituencies should be reserved for males.

## **SIX**

Currently, the private hospitals, hotels and lawyers charge a VERY HUGE amount from patrons/clients. The government will make necessary enforcements and these will be put under severe surveillance.

## **SEVEN**

Now there is a centralized power system in India. De-centralized administrative reforms will be carried out to SPEED UP the administration.

## **EIGHT**

The children of government employees and officers **MUST** study only in government schools. An act will be passed by assembly to enforce this policy.

## **NINE**

All the RIVERS will be unified / integrated to avoid water disputes and to save water running waste into oceans.

## **TEN**

More branches of Taluk Courts, District Courts, and High Courts will be constructed and function in different zones of the state. This will hasten the PROMPT disposal of cases. Also, four to five Supreme Court branches at various states should be opened for quick disposals of the cases.

## **ELEVEN**

The salaries of top government officials, MLs, MPs and Ministers will be CUT to size.

## **TWELVE**

To know the pulse of the people, each government staff should work minimum one month in agricultural farms and factories. NO full time officers and no full time other mental employees. In this way, the mental employees can know the pulses and problems of the physical labors. Physical and mental labors/ employees **MUST** be treated equally.

## **THIRTEEN**

The coconut and Palmyra toddy will be prepared by modern scientific methods by the government for sales. This will definitely safeguard the health and prevent the physical complaints of the consumers. Also, this is a good revenue for the government.

#### **FOURTEEN**

- 1) All the co-operative society loans of the small farmers will be waived.
- 2) Loans free of interest will be provided with these farmers to buy and maintain cows.
- 3) The government will encourage a group of these small farmers for more and more dairy products - making for mass consumption and exports.

#### **FIFTEEN**

- 1) The government subsidy for Pasumai Veedu will be increased from 2.25 lacs to 5 lacs.
- 2) To white wash these homes, the government will freely give the required costs annually.

#### **SIXTEEN**

The government will donate a sum of Rupees Five Lacs for a qualified medical doctor to construct a clinic to practice in villages.

#### **SEVENTEEN**

Free bus journeys will be provided to school and college students.

#### **EIGHTEEN**

1) The government will give main preference to Tamil/regional Medium students in all walks of life.

2) For a group of twenty government schools, the government will arrange special coaching and tutorials for Tamil medium students to prepare TNPSC, UPSC and other allied/related examinations.

## **NINETEEN**

In government offices, the people will be highly respected and their complaints and grievances will be heard sympathetically and rapid remedies will be made. Nobody will be ill treated or discouraged.

## **TWENTY**

Mobile courts and mobile hospitals will visit every village and town for the convenience of the people.

## **TWENTY ONE**

The veterinary doctor will visit all the agricultural fields and give treatment to cattle. All the medicines will be free of cost.

## **TWENTY TWO**

There are a lot of hidden treasures of ancient Tamil Arts, Drama, Village Literature, Siddha Medicinal Formulae, Yoga and Meditation Techniques. The author of this election manifesto practiced 32000 years old Lemurian yoga and it yielded this author to solve 2300 years old unsolved mathematical problems.

## **TWENTY THREE**

In evening hours volunteers and part time government staff will teach and instruct the above mentioned subjects to the people freely so that Tamil hidden treasures will be disseminated and the applications will reach the masses.

#### **TWENTY FOUR**

The government Public health Center [PHC] doctors will visit every home and every farm house and treat the patients.

#### **TWENTY FIVE**

The low income people will be given a sum of twenty thousand rupees for the marriage of their daughters.

#### **TWENTY SIX**

The low income people will be given a sum of twenty thousand rupees for the funeral rights for each member of their family.

#### **TWENTY SEVEN**

The government will provide PREGNANT ALLOWANCE a sum of five hundred rupees per month for the low income family pregnant women. Also the government will take care and meet all the expenses for the baby delivery of these pregnant women.

#### **TWENTY EIGHT**

The government will award considerable ENCOURAGE PRIZES for the 1<sup>st</sup>, 2<sup>nd</sup> and 3<sup>rd</sup> rank holders. The volume of the prizes will be decided later.

#### **TWENTY NINE**

The government will encourage, honor and help students, teachers, professors and all researchers for their outstanding research results, discoveries and inventions by rewarding a huge volume of funds.

### **THIRTY**

In each and every Taluk, the government will open a special office to receive grievance petitions. The necessary actions/remedies will be provided to the people within 15 days.

### **THIRTY ONE**

In every village, the government will appoint priests to conduct PUJAs regularly.

### **THIRTY TWO**

All pensions, except armed forces, police and allied services should be abolished immediately.

### **Discussion**

There are good MLAs, nice MPs, pure ministers, straight forward governmental officers and employers. In some departments, the administration is very good. For example, Indian postal and telegraph, defense forces, police department and Indian judiciary. The above thirty points are only for anti nationals. The author is bound to recognize the better persons.

These 30 proposals are good in principle but is it possible to implement them. No ruler can implement all these suddenly. But it is certainly a realty and easy to implement one by one. The author likes to appeal to implement the first proposal which states:

**The village agricultural laborers and workers will be paid by the government. Yes, hereafter, they are government employees. Each male and female will get Rupees 500 and Rupees 300 respectively per day.**

In many countries the agricultural workers do not get proper wages to run their families and educate their children. Moreover, the constitutional rights are being refused for these masses. Mahatma Gandhi gave much importance to agriculture and villages. Soviet Russia failed to give importance to agriculture and villages. That's why the system miserably failed.

A problematic problem is also there. How to increase the revenue to implement the above mentioned 30 economic cum administrative reforms? The author is sleeping on this challenge. The author is going to INVENT the good ways and means to increase revenue for the governments.

The author's first preference is the villages and agricultural daily wagers. The author will certainly tell a number of novel ideas and concepts in the next paper.

Basically, the author is a research scientist in mathematics, physics, cosmology, alternative yoga and alternative medicine. The author has published a number of articles in peer reviewed journals. The fifth Euclidean postulate is mathematical impossibility. The angle trisection is an antic problem. The author has found several solutions on these topics and published papers in professional international journals.

Two of extraordinary articles authored by the author have been indexed and abstracted by the Mathematical Reviews of the American Mathematical Society. Also, nineteen of the author's published works have been included in the world famous INSPIRES HEP.

The readers and experts may ask why a scientist enters into economics and administration. The reason is that scientific advancement becomes meaningless if there is no good administration and nice economy in a nation.

Let us bring to our memory what Napoleon said, "The word impossible should be taken away from history."

And the greatest scientist Einstein time and again used to tell: "Imagination is more important than knowledge."

So, the author who has solved two mathematical impossibilities is able to propose solutions to the thirty issues raised by the author with the cooperation of good people.

### ***Please Note***

***In order to implement the above policies, the government needs huge volume of funds. The ways and means to earn the required revenue will be spelt out soon.***

### **A brief profile of Acharya Sennimalai Kalimuthu**

Acharya Sennimalai Kalimuthu has 35 years research experience in mathematics, physics, cosmology, alternative yoga, alternative medicine, and various spiritual philosophies, new administrative and economic reforms.

### **First Invention**

The fifth Euclidean postulate is 2300 years' old unsolved problem. Each and every TOP international mathematician tried unsuccessfully to solve this great problem. Great mathematicians like Lambert, Saccheri and others devoted their entire life for more than 50mlong years in search of a solution. These studies gave birth to more than 25 equivalent propositions to the fifth postulate. The famous Russian mathematician Lobachevski found hyperbolic geometry which is widely applied in quantum physics. Another researcher Riemann invented elliptic geometry which is the foundation for the formulation of general relativity.

Sennimalai Kalimuthu tirelessly worked on this topic for more than 30 years and invented a number of consistent solutions. He has invented

five different proofs for this problem. These works have been peer reviewed and published by international professional research journals.

## **Second Invention**

In the classical Euclidean geometry, the sum of the interior angles of a triangle is equal to 180 degrees. This geometry has wider applications almost in all branches of science, engineering, art and other fields. Newtonian mechanics is based on this geometry.

In Lobachevskian geometry, the angle sum of a triangle is less than 180 degrees. This is mainly applied in quantum mechanics, navigation and some other scientific branches.

The Riemannian geometry, the interior angle sum is greater than 180 degrees. Einstein assumed the salient features of this geometry for the creation of his famous general relativity theory.

Sennimalai Kalimuthu has found that the following ground breaking results in spherical geometry:

- a) There exists a spherical triangle whose interior angle sum is exactly 360 degrees.
- b) We can construct a spherical triangle which has 540 degree angle sum.

These are novel and revolutionary inventions. This will have beautiful physical and cosmological applications in future. These findings have been published and indexed by the Mathematical Reviews of the American Mathematical Society.

### **Third Invention**

Trisection of an angle without using a protractor is an important 2300 years old unsolved antique problem. Almost all the famous mathematicians tried to locate a solution for this problem but unfortunately failed. Sennimalai Kalimuthu with his PhD student Sivasubramanian found a consistent proof and this has been accepted and published.

### **Fourth Invention**

Sennimalai Kalimuthu discovered a simple topological experiment. This outstanding experiment proves another mathematical impossibility. The result is that topologically a circle and a straight line are equivalent.

### **Fifth Invention**

In 1921, the noted Russian mathematician Alexander Friedman by analyzing Einstein's field equations of general relativity theory showed that the shape of our Universe has only three possibilities. It may be flat, closed or open. NASA, ESA and other important experiments and observations showed that the shape of our Universe is flat. But there is

no mathematical proof for this conclusion. Sennimalai Kalimuthu formulated two mathematical proofs for the flat Universe.

### **Sixth Invention**

Sennimalai Kalimuthu has performed two experiments in Einstein's special and general relativity theories. He has found in general relativity that the attracting force of an object in space curves the space. In special relativity, Sennimalai Kalimuthu and his PhD student Sivasubramanian published a paper validating Einstein's variance of mass with velocity equation.

### **Seventh Invention [Alternative Medicine]**

By deeply probing the Siddha medicinal literature Sennimalai Kalimuthu has proposed an inhaler for trial to heal coronavirus.

### **Eighth Invention [Alternative Medicine ]**

There are several types of medicines namely, allopathy, ayurveda, siddha, unani, herbal and other types. How to live for longer and longer, say for hundreds of thousands of years is an interesting and challenging question of mankind. Sennimalai Kalimuthu has created a Siddha cum Unani formula for a longer span of life.

### **Ninth Invention [Alternative Yoga]**

The yoga we normally practice is nearly 7000 years old. This type of yogic ethnic is Hada yoga and this was introduced by the Himalayan seers/Monks/Siddhars. Nearly 32000 years ago, the Tamil Siddhars formulated easy yogic and meditational techniques. Still this day, this bio science is not disseminated and remains a hidden treasure. Sennimalai Kalimuthu has met genuine Siddhars and learnt these novel methods.

### **Tenth Invention [Space Electricity and Space Bombs]**

Without any raw material, Sennimalai Kalimuthu has proposed a scientific project to generate electricity freely from space and to make space bombs without involving Uranium and Thorium elements. The successful completion and implementation of this scientific project will make India NUMBER ONE SUPER POWER ON EARTH.

This ambitious scientific project of Sennimalai Kalimuthu was peer reviewed and published by the famous American journal: AMERICAN JOURNAL OF SCIENCE.

### **Eleventh Invention [Administrative and Economic Reforms]**

Sennimalai Kalimuthu has found implementable administrative and economic methods in 2019. This is really a revolutionary proposal. The introduction and implementation will make earth another El Dorado. This paper was also peer reviewed and accepted by many international journals for publication. World Rural Observations, a famous Marsland Press publication of the USA accepted after careful analysis and review and published.

### **Twelfth Invention**

There are a number of novel ideas on New Administrative Reforms, New Economic Policies, New Spiritual Policies, New Employment Policies, New Educational Policies, New Industrial Policies, New Foreign Policies and New Agricultural Policies.

I would like to mention once again that I have solved two 2300 years' old unsolved mathematical problems. My findings have been approved, accepted by International Experts and published in national and international peer reviewed research journals.

**SO THE AUTHOR CAN EASILY LOCATE SOLUTIONS TO  
NATION’S BURNING PROBLEMS AND ISSUES.**

Om Tat Sat
