<i>The invasion of the Tatar-Mongols in Russia. What was it.</i>	<i>1</i>
Foreword. About the author.....	7
About the book.	7
Introduction.	8
Geopolitical location of Russia.....	14
An ancient Chinese legend.	14
Geography of Russia.	16
The essence of the tragedy of Russia.....	18
Preliminary. Basic postulates.....	20
Of course, evolution is based on Darwin.....	20
Cannibalism as an engine of evolution.....	21
The basic concept of History.	24
How raids are organized.	25
Various types of bogey to attack.	26
About the terms.	27
Predator-prey relationship.	28
How do we behave so as not to die out?.....	29
A deadly argument for the inversion of the whole story.	30
Comments on the "Roman kings".....	33
Preliminary. The documents.....	34
Basic historical facts.....	34
Chronology of solar eclipses. Who watched them.	34
Common chronology. BC.....	36
Common chronology. Our era.....	39
Preliminary. Biology.....	50
What is the meaning of Life on Earth?.....	50
What is Mind?.....	52
Civilization is the era of mankind's madness.....	54
How peoples genetically move away from each other.	56
Why are there so many freaks in Russia?.....	56
Common causes of deformities.	60
Our hypotheses about the causes of specific deformities.	61
How chromosomes build organs and body parts.....	65

Chromosomes and defects.....	67
Chromosome 1.....	67
Chromosome 2.....	68
Chromosome 3.....	68
Chromosome 4.....	69
Chromosome 5.....	69
Chromosome 6.....	70
Chromosome 7.....	70
Chromosome 8.....	72
Chromosome 9.....	73
Chromosome 10.....	74
Chromosome 11.....	75
Chromosome 12.....	76
Chromosome 13.....	76
Chromosome 14.....	77
Chromosome 15.....	78
Chromosome 16.....	79
Chromosome 17.....	79
Chromosome 18.....	80
Chromosome 19.....	82
Chromosome 20.....	82
Chromosome 21.....	82
Chromosome 22.....	85
Chromosome X.....	85
Chromosome Y.....	87
Trisomy is a common word.....	89
Proteus syndrome.....	90
Epidermodysplasia verruciform.....	90
Hypertrichosis.....	91
Progeria.....	91
Explanation of terms.....	91
The phenomenon of hybridization.....	95
The tragedy of human hybrids.....	97
Possessed by a genetic demon.....	98
Natural phenomena are close to the topic.....	101
Human personality.....	101
Mosaicity of the body.....	102
Right-handed and left-handed.....	104
Territorial and herd principle.....	104
The phenomenon of interference in evolution.....	105
Evolutionary processes in humanity.....	106
When evolution branches.....	108
New laws of genetics.....	110

Complete analogy with the animal world.....	110
Optional: Do women have the right to orgasm?	112
Optional. An invention that will be useful to old people.....	115
Preliminary. Biology about the brain.....	118
Primate Brain Evolution	118
Where does the mind begin?	119
The mind of monkeys.....	120
Stages of the evolution of the mind.....	123
The complexity of the task and the number of cells.....	129
Differences between the brain and thinking	133
Mosaicity of the brain.....	135
Illustrations of the differences in the structure of the brain.....	135
Brain rising from all fours.....	140
One popular bike from the USSR era.....	141
Thinking short and long.....	143
The Logic of Reason and the Logic of the Macedonian.....	146
Broad but shallow Russian nature.....	151
What is lust for power?.....	152
Analogies.....	154
1. Computer analogies.....	154
2. Comparison of a common man and a genius with a book.....	155
3. You and you.....	156
4. Conscience and shame. Someone else's pain.....	156
5. Controlling the body of a common man and a genius.....	157
6. Biology. Reproduction laws.....	158
The theory that explains all politics.....	159
Preliminary. Linguistics.....	166
There is a common language!.....	166
Why does no computer succeed in accurate translation?.....	169
Replacing the letter combination XB with F.....	170
The relationship of the letters C and G.....	171
Why was the part of the word "th" and "him" in Russian invented?	173
Ending -IN in names of cities and surnames.....	174
Finnish, Finno-Ugric and Mongoloid surnames.....	177
Three waves of invasion of the Finno-Ugric to the Slavs.....	179
Russia is an empire.....	184
What surnames rule in Russia?.....	185
Zion language period of the settlement of mankind.....	189
Gauls.....	190
A little about the creators of modern history.....	190
The origin of the name of Russia. Aust-Razia.....	192

A little about playing cards.....	196
Origin of the name Moscow.....	196
The Chebarkul meteorite suggested the name of ancient Russia.....	198
Why do Russian soldiers shout Hurray when attacking?	202
One version about Genghis Khan.....	203
Why Gagarin and not Titov?	208
The wonders of linguistics and the Russian future.....	209
Russian commandments. For lovers of linguistics.....	211
Linguistic aspects of the settlement of the Slavs.....	212
Does anyone remember the Hunniks?	214
The emergence of the word "Tatars".....	215
Where did the term "Mongols" come from?.....	217
Kings with small stature.....	218
Derived from the word TSAR, which have a negative meaning.....	219
On the question of the emergence of Christianity.....	221
Who are Ruriks ?!.....	230
Who is Kalita ?!.....	231
The role of pygmies and dwarfs in human history.....	239
Abusive language.....	255
The obscene language is the language of the rulers over the conquered.	255
The Tsarist word of the Russian language.....	258
Historical jumps of letters.....	260
Table 1. Historical jumps and letter interchanges.....	265
Table 2. Main variations of the CAR root.....	266
Basic methods of forming new words from roots.....	266
Table 3. Variations of suffixes to the root ЦАР.....	266
The oldest word in the Russian language.....	291
The most important word of all mankind.....	312
What has been preserved in linguistics from Tartaria and Attila.....	504
<i>History itself.....</i>	505
The global history of mankind from the beginning of settlement to our era.....	505
The hypothesis of double settlement of humanity.....	505
The Mouse Paradise Experiment.....	511
About the role of Jews in all historical events.....	511
On the historical meaning of the church and religion.....	513
There are only two types of government.....	514
From the beginning of settlement to 40,000 BC.....	514

What are inflectional and agglutinative languages.	514
Resettlement of man from Africa.	515
Resettlement of mankind in the last 40,000 years.	521
Stage one. 40-30 thousand years BC.	523
The emergence of the Mongoloids.	524
Stage two. 30-20 thousand years BC.	526
Formation of European appearance.	527
Stage three. 20-10 thousand years BC.	529
Stage four. 10-5 thousand years BC.	532
The emergence of the people of the Great Russians (Finno-Ugric).....	534
Stage five. 5.000 BC.....	535
The shattered skull period.....	542
Stage six. Europe 4.000 BC.....	551
Stage six. 4000 BC. Heading east.....	553
Stage seven. 3000 BC.....	554
Stage eight. 2000 BC.....	555
List of materials used.....	556
Major events in Russia.	556
The mysticism of the Russian flag.....	556
Russia as a battlefield between the Slavs and the Mongoloids.....	561
The system of imitations in Russian society.....	565
The main genetic alignment before the new story.....	567
Why are there fewer Aryans today than Erbins?	570
Movements of Russian haplogroups.....	571
Tartary.	580
Two Tartaria: North and South.....	581
What does the difference between haplogroups mean?.....	582
The oldest Russian haplogroup: I2a - 11%.....	583
The next most ancient haplogroup: N - 20%.....	584
And the youngest haplogroup: R1a - 47%.....	587
Slavs.	593
There are supposedly three groups of Slavs.	593
Russia is not a single people.....	597
Difference between Slavs and Ugro-Finns.	599
What are Russians.	609
The story of Oleg Tabakov and his first wife.	611
How to position yourself for the Slavs to small nations.	612
With the collapse of Russia, the Slavs will be left without nuclear weapons.	615
What Ukrainians and Russians need to do to reconcile.....	618
Ukraine.	620

How to enslave the great Russian nation.....	621
Bananas are not Russian food.....	624
Great Russians.....	625
Invasions of the Great Russians.....	628
Revolution of 1917. What was it.....	632
The idea of communism.....	633
Lenin.....	635
Bandits are the basis of the unity of Russia.....	638
Smart and fools.....	641
List of stupid initiatives for the authorities.....	643
The struggle between scientists and scientific administration.....	648
The system of dissertations is outright fascism.....	651
Intellectual slavery in Russia.....	652
How the Physicotechnical Institute was organized. Groups, elders.....	653
Optional: article on the sports system.....	654
The system for evaluating the results of multi-stage competitions.....	657
Which is more important: the census or the elections?.....	668
The main troubles of Russia.....	669
Cold climate service.....	670
Serving a vast territory, vast distances, the world's longest road network.....	671
The poverty of the Russian people is a payback for the territory.....	671
Serving a multinational people, with all internecine and internal problems.....	672
Serving the flight of intelligence and capital to countries with better climates.....	673
Illustration of Gödel's theorems.....	673
Conclusions.....	675
What was Gorbachev's mistake?.....	675
Yeltsin.....	678
Putin.....	680
One important point about the destruction of the USSR.....	682
Crimea.....	684
Role of China.....	685
What idea can magnetize Russia.....	685
What could be the new Soviet Union.....	688
Where should the border be between the Slavs and the Finno-Ugric.....	689
What did the "Mongol-Tatars" look like?.....	691
Taking off the masks from the Mongol Tatars.....	691
What did the "Mongol-Tatars" known to all of us look like?.....	692
Genghis Khan.....	693
Khan Batu.....	696
Khubilai.....	699

Foreword. About the author.

Haplogroup Dubinyansky. Male N1a1 (like Ruriks). Maternal J1c (like the kings of England Richard 3 and Edward 4, as well as the poet Francesco Petrarca).

A member of the J1c group married a member of the British royal families, and then her descendants gradually settled in Britain, Ireland, and other European countries. Then they reached Poland, where the author's closest female ancestors were born. Further, the ancestors moved to Ukraine, then fled from hunger and epidemics to Kazakhstan. Where nearby (in Simbirsk = Ulyanovsk) the author of this book was born. Thus, the author is a distant descendant of British royalty. However, as well as a distant descendant of the Rurik in the male line. Than the author is deeply disappointed, since he always considered himself a Slav, the mother is a pure Slav, but alas, the father turned out to be a Finno-Ugric, a Slav-Chinese hybrid. The author has no sympathy for the Finno-Ugric people and never will.

I want to add a personal observation. When I was alone with my maternal sisters and nieces, I felt the strongest love for them. They come to me too. I conclude that love is in the mother's DNA. When people with the same maternal DNA meet, love flares up between them, which cannot be overcome. In addition, communication with male paternal relatives is always friendly. Including with strangers, but namesakes. I conclude that male friendship is encrypted in the man's Y chromosome.

It seems that such functions of maternal and paternal DNA were laid down by nature not by chance, but in order to preserve the integrity of the ancestral line, the integrity of the tribe. In order not to get carried away with marriages with those living in neighboring villages.

About the book.

In 1917, not consciously, not intentionally, it was not a proletarian revolution that took place, but an outwardly very similar ethnic coup. And under the slogans of "internationalism" national minorities came to power: Finno-Ugric, Caucasian peoples, Mongoloids and others. Under the leadership of the Finno-Ugric Lenin and the Georgian Stalin. The Slavs lost their power and their territory. Russia lost more than 100 million people in the 20th century due to wars, mostly Slavs.

This book is a very crude historical research and is published only because of the poor health of the author. In the event of his death, much may be lost to the science of history. Some chapters are in the nature of historical fantasies, little supported. Not all chapters form a coherent narrative. Some chapters fall out of the general context, because they were written many years earlier, and the authors' outlook is changing. But at the same time, they still bring their meaning into the picture of history. The chapters on linguistics, especially on word sets, are approximate and do not cover the entire vocabulary. It is very time consuming. Added words with the root DAR, DAL, DAG, related to the root TAR. This is a very large linguistic layer, adding to history, perhaps, such peoples as DAGI (Dagestan, Adygea) or cities like Krasnodar. Or, perhaps, explaining the appearance of the German articles DER, DI, DAS.

Introduction.

I am reminded of one American film, circa 2005. Two ladies, a mother and a daughter, come from some guests to their large three-story mansion. They live in it for several days. But they notice some oddities. Ghosts appear in the house. Then the door will slam somewhere. That is the stamping of feet on the ceiling. Then speech is heard in the distance. Some kind of silhouette at the end of the corridor. They discuss it, worry, are afraid. Time passes and a mother and daughter, having accidentally heard a conversation between ghosts, suddenly realize that these supposedly ghosts are actually living people. And that the ghosts

are themselves. They themselves are simply the souls of a recently deceased mother and daughter, who are given to live in their home for 10 days before completely retiring to another world. And those whom they are discussing are the new tenants of the house.

I had about the same feelings after 67 years of living in this country. Starting from school, according to textbooks and according to official information, we have always been surrounded by some kind of enemies. We were always attacked by some bad people, and we ourselves defeated such bad bourgeois, and now we are building the most just society in the world. We were heroic, white and fluffy, we sang "And I walk around Moscow" and "The land is empty without you", but for some reason they did not like us and some republics wanted to secede from us. Some separated, some we did not let go. For some reason we were told that these republics were bad, and for some reason they hated the Russians. Why?!

This book has a very different from the official view of the events taking place in and around Russia. And this is an attempt to understand why we are not loved. And why we don't love ourselves. This is a dangerous look. When I comment on this topic in social networks, many meet my comments with hostility. Moderators are banned. Like, you kindle, you want to quarrel the peoples. When I publish the book, there is a chance that I will be killed. Such things do not pass with impunity in Russia. Well. I lived mine. I got it.

But why am I writing it? Sit down, drink in two holes, and do not rock the boat. "And then, since the 1917 revolution alone, Russia has lost at least 90 million of its population. According to other estimates, everything is 100. And it will lose further if nothing changes. Here, let's count: 1) Civil about 10 million 2) Repression, collectivization about 10 million 3) Patriotic about 27 million 4) Not born in the era of Yeltsin-Putin about 30 million. And if you count the famines, in Ukraine, Russia, Kazakhstan ... If you count the losses of Chechens and Crimean Tatars when resettling to Kazakhstan. If we calculate the losses during the

expulsion and extermination of Russians in the dashing 90s from Asia and the Caucasus, then it will turn out to be even greater.

Today, in the 2020s, military hysteria is again whipping up. Again, hostile clouds are hovering over us. If our peoples do not understand the reasons for what is happening, then there will be new civil and patriotic wars, which will again claim tens of millions. And this must be prevented.

Why do you need to know and understand all this? But because strange and inexplicable things are happening. Russia is crammed with monsters from decaying hybrid Great Russian genetics. Up to 20% of the people have bodily deformities. The same number of cerebral ones. People don't understand where what comes from. Perhaps my knowledge will be useful to someone, perhaps he will continue and deepen my lines of research.

In Russia, the phenomenon of marrying not for love, but for lack of pity, has become widespread. This is when one of the spouses has a hidden hereditary defect. And he is no longer looking for love. He is looking for a victim so that if the defect passes into children, then this sacrifice would not be a pity. And as a rule, such marriages are entered into by people of different nations, for example, Slavs and Finno-Ugric. It's not a pity for a foreign nation. And given the huge number of people with hidden defects, there are also a lot of such marriages, millions. After all, none of the partners will spread about relatives with diabetes or psoriasis.

The majority of our people perceive these past losses as completely natural events. The way the Kremlin authorities tell us. That is, we are white, fluffy, heroic, built and built at first such a good socialism (with millions of repressed), did not complete it because of the war. After the war, it was built again, restored, and almost built. But then an incomprehensible coup took place in the country and the country collapsed. Then they built and built such a good democracy, but again they did not complete it due to the intrigues of NATO. And democracy turned out to be kind of strange and inhuman. Evil capitalist kites and hawks hover around us, pecking out our eyes and tearing pieces of meat from us.

Someone puts sticks in the wheels, someone throws stones under their braids ... But the powerful propagandons can be trusted for years, decades, and then enlightenment comes. Something is wrong with our authorities. We are not going there. The wrong people crammed into power. Why not those? But this is what you need to figure out. Why do many countries hate us? Why are we constantly at war? Why do we have the largest territory? Why do we need such a huge territory? Why do we need so many different peoples? There are a lot of questions. And without an answer, you will continue to live It's getting harder and harder.

I watch on TV a documentary about our victory in the Great Patriotic War. I see hundreds of thousands of German prisoners walking along the streets of Leningrad, Moscow, Stalingrad. And now I understand, see and know that they are the same people as we are. They are no worse and no better than us. They were forced, zombified, they followed the order. We all settled several thousand years ago and descended from the same peoples. The same dirty faces of these prisoners, which sometimes we have, the same as our souls and characters. Only the dialect is not ours, our languages have diverged over the centuries. People moved to other territories. Maybe by someone's will and intent, or maybe under the influence of circumstances, impurities in the genetics of the people. So why, for what purpose and for whose purpose did we fight them? For what, for what? Who convinced them that they are better than us? Who convinced us that we are better than them? Why did they and we, both sides, lay down millions of people and inflict such suffering on each other? For what? What is the meaning of our victory? And who actually won? Why did we, after such a victory, lose to them in economic competition and the level of well-being? In general, is it good or bad to have well-being?

Three centuries ago, the Germans were allowed to calmly come and settle with us, in Russia. They came and settled. And they could still come and settle. And not a single writer or official, after many generations, has noted the difference in the residence

of Germans in Russia from the residence of Russians, either in a bad or in a good way. Is that the Germans had more order, work, improvement and less slovenliness. Only climate and natural conditions determine the standard of living. So what caused this great war?

Many strong men strive to take the place of the leader of the people. This is how nature works. But in order to become a leader, you need to create a legend of who you are, why and why. As a rule, the legend is selected in line with the current events.

The leaders choose, as it seems to them, a high, but in fact, a primitive, understandable, obvious, albeit very significant goal, followed by the majority of the population, and achieve tremendous success on the path to achieving it. These are the Leninist and Stalinist goals. These are the goals of Napoleon, Genghis Khan, and other conquerors. They suddenly, at a certain stage of life, some from birth, some later, and some even later, as it happened with Corporal Hitler, begin to feel genius. And this is a real genius! They do not understand that this is genius in a narrow field. The leaders do not know what they are doing because of the narrowness of the personality.

The essence of genius is that the brain realigns in a narrow direction, like a spotlight. It begins to shine far, but not wide.

I am reading History or watching a historical film. Millions of victims. Here are Lenin and Trotsky. Here is Napoleon. Here is Cortez. Here is Batu or Kublai Khan. Here is Macedonian. Here are the ancient kings and pharaohs. All these leaders led people to civil or aggressive wars, to capture people into slavery, to death and to kill other people. For what? For what? - And all for the same. They felt like geniuses, and this was truly so, but did not have time to realize that it was only and, unfortunately, this narrow area was politics. In which they did what an effective but irresponsible politician should do. And why the hell are they praised in documentaries and feature films, these leaders, but in fact criminals? Why the hell are they admired and write groveling books on history with significant events during the reign of this or

that monster? What the hell is attributed to these bloody villains, inhumans, some sublime spiritual qualities, love and so on? These are all crazy false films about Caesar, Nefertiti, Buckingham, Stalin, the good Ilyich, and the like. There was no all this, no nobility and subtle movements of the soul. Only momentary lust, arrogance, impudence, confidence in impunity and compensation for their miscalculations with thousands and millions of lives of ordinary people. Only kill a neighbor at the slightest suspicion. Only Lenin's: "kill, kill and kill, my friend!"

I am aware of the 1918 civil war, which claimed 10 million casualties on both sides. And some have more. And I know the following decades of repression, which took away millions more. This is a total of at least 10 million more of the elite of the Slavic people, an unprecedented and irreversible genocide carried out under the leadership of a clique of Great Russian (not Slavic) Bolsheviks.

Which led to the subsequent agony and idiocy of the remnants of the population and the entire country, bringing the top to insanity. And the point is not that the best genetics were killed and expelled from the country, although that was the case. The fact is that there could be some mediocre genetics with various variations, defects and deviations, but because of this they were motivated to assimilate knowledge, to strive for the development of intelligence, for a career and for the subsequent development of the economy and structure of the country. These were potential carriers of progress. I see the current state of my country. I see this country ravaged, plundered, done with commodity appendage of the West and I know who did it and why they succeeded, why there was no such segment of the population that could resist. Destroyed all domestic production, industry and agriculture. Destroyed cultural accumulations. Who did it and why? For whose benefit, for whose benefit? For what kind of "golden billion"? For whose good are they lying now, what has become better and to whom and at the expense of what? But won't

everything that happened a long time ago be repeated as soon as it is forgotten a little?

The basic tenet of philosophy says: there is something! And having already accepted this postulate, philosophers begin to understand what this something consists of.

Let the ill-wishers scoff, but the task of the search scientist is like the task of a pioneer through a swamp. He cannot stop at every bump, because the bump goes under the water and sucks in the pioneer. That is, he cannot and should not detail every small aspect. It's easy to drown in every detail. Let the dissertation candidates elaborate later, they love it. The task of the pioneer is to quickly, without stopping and "not going deep" into the details, run over the bumps from one bank to another. And already from there, from the other side, to shout to people that a new land exists. And then scientists will study every bump, strengthen something somewhere, and build bridges.

Geopolitical location of Russia.

Russia is located between the Mongolian hammer and the Slavic anvil. The people of Russia are a hybrid mixture of Mongoloids and Slavs. As is known from genetics, all sorts of hybrids, left to themselves, gradually degrade and disintegrate into their original components. A field planted with hybrid high-yielding corn degenerates after 3-4 years and disintegrates into patches of pure original corn lines. With human peoples, this happens much more slowly, for millennia. But all hybrid empires fell apart irreversibly. The Roman Empire collapsed, the British Empire, and the Russian Empire collapsed. Our task is to carry out this disintegration in a civilized manner, without wars, without genocides, without massacres, without terrible cataclysms and tragedies. Peaceful and thoughtful, along pre-designed borders.

An ancient Chinese legend.

One yellow-skinned Chinese people (when they had not yet come to the territory of present-day China) suffered greatly from the invasion of white-skinned robbers. The robbers were large and strong, much stronger than the small and bow-legged Chinese. The robbers came unexpectedly and took everything: stocks of rice, cereals, spices, cattle, building materials, fabrics, household items, pots, and also everything that they liked.

And then one day a wise old Chinese leader gathered the leaders of the tribes and told other Chinese leaders. Do we want to survive? Or will we be subordinate to these white-skinned people? We have a way out. But our men have to work. They have to sneak into the dispositions of white-skinned people and kidnap their women. Preferably the strongest and most beautiful. We will keep these women in secret places and they must give birth from our men. They will give birth to the same heroes as the white-skinned themselves. And then our people will acquire strong defenders. This is what the Chinese did.

This is how the first Slavic-Chinese hybrids arose. Hybrids have the property that in the first generations they are very good, and this greatly justified the hopes of the main Chinese leader. They were even better than the original pure peoples. They were as strong as white-skinned and as smart as the Chinese. And if this was not the case, then they were eliminated. The first Chinese hybrids were named Hunnu.

The Koryaks and Chukchi have preserved this custom. The wife is cheating on her husband, it is allowed and even encouraged.

True, strong hybrids reproduce only for a few generations. Then the mixing of genetics and the degeneration of hybrids begins. But the Chinese did not notice it at the time. This happened in a time interval longer than a human life. The main thing is that they have created a protection for themselves. This hybrid people arose in Eastern Siberia, multiplied, adopted the faith of the Chinese and moved west. Because for him, China was his homeland. And they do not fight with the Motherland. This hybrid people conquered many lands and called themselves Kings of Kings, or TarTar in

Chinese. They were the people of Slavic-Chinese hybrids. Genghis Khan and other Mongoloid khans were later born from this people.

But this hybrid people, according to genetic laws, was constantly degenerating. A large percentage of young people dropped out of the general breeding cycle. That is why this people needed either a high birth rate, or constant feeding by representatives of pure peoples: Slavs, Asians, and later Chechens, Armenians, Dags, Bashkirs and others. Therefore, Tartaria conquered the neighboring Slavic, Caucasian and other peoples. And even later, the name of Tartary crept into Kievan Rus and the name was changed to Russia.

This is how, historically, Russia stands guard over the great and wise China. She is at war with Europe and defeats her. She guards Siberia and waits for China to build all communications and multiply to populate Siberia, Altai to the Urals. And later they will go even further, throughout Europe, grinding European genetics. And gradually China will conquer the whole world. And Russia will gradually assimilate into a mono-national communist China.

Geography of Russia.

Quite simple. Russia is located between the world Slavic area and the world Mongoloid area. Russia is a country of Slavic-Mongoloid (= Slavic-Chinese, = Slavic-Yakut) hybrids. In some places, these hybrids crushed pure peoples for themselves: Ukrainians, Belarusians, as well as Yakuts, Mongols.

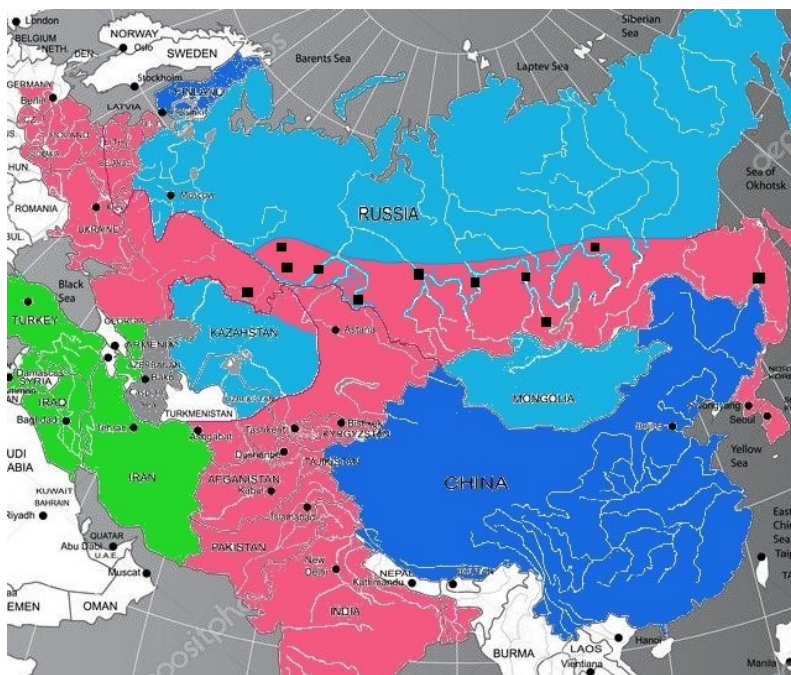

Figure 01.

This figure is shown in pink - a large percentage of the Slavic population. In blue, a large percentage of the Mongoloid population. The Chinese and Finns are highlighted in blue. This is haplogroup N. Asian Muslims are shown in green. The capital of Russia itself is located in an area of predominantly Finno-Ugric population, haplogroup N. That is, it is controlled by the descendants of the Tatar-Mongols.

Why has Russia penetrated so far into the Far East? This was done at a time when there were no maps. The Slavs apparently kept their way "to the sun" or "to the heavenly". They tore up the Mongoloids, drove them behind the wall that they built for protection. But when they reached the Pacific Ocean, they did not find anything there and turned back. Some of the Slavs remained to live there. And after a while on the way (several centuries), the Slavs turned south, bypassing China.

More detailed. Russia is located between 1) the world Slavic area from the west (former socialist countries) 2) southwest (Ukraine, Moldova, Romania, Bulgaria) 3) southeast (India, Pakistan). 4) In the underbelly of Russia today are many small countries with a significant percentage of the hybrid Slavic-Chinese population (Afghanistan, Kyrgyzstan, Tajikistan, Uzbekistan, Kazakhstan, Turkmenistan), which were previously part of Russia. and 5) Mongoloid area (from the east and northeast). On the territory of Russia for many millennia there have been wars between the nation of Slavs and the nation of Mongoloids. Even more than that: between the race of the Slavs and the race of Mongoloids. Because the differences between these nations are very significant, both externally and internally.

Russia itself is also not very simple in its structure.

The figure shows that Russia was able to dismember the Mongoloid race by military means. However, today Russia is weak and China is strong. And the process of dismemberment of the Slavs can occur. And he is already really going. The Far Eastern offshoot of Russia will most likely be absorbed by the one and a half billion China and its allies.

The essence of the tragedy of Russia.

In a few words, it is described as follows. Russia found itself between two millstones. On the right are the Mongoloid habitat, 2 billion. On the left, the area of the Aryans, also a little less than 2 billion in total. And between them is Russia, a huge territory in which a gradual gradient in appearance from east to west occurs from a complete Mongoloid to a pure European. But it would be okay only for the appearance. There is also a mixing of the viscera, the mentality of people.

Why don't animals mix? Because it creates a lot of problems and benefits the predators. And how to live mixed people with very different characters, inclinations? Any differences from your psychology and character strain people. Introduce elements of hostility into life together. That is why the countries of Europe fell

apart into small states. And it is right. Each person can choose a suitable country to live in. But in Russia this mixing of peoples has reached not only a mixing of nations, but in general a mixing of races, Mongoloid and Caucasoid. Therefore, since antiquity, Russia has been battered by wars, genocides and extermination.

So what's the problem? Would they have taken it, but divided into small states? That is the problem. Firstly, it's scary, because the West will trample and destroy everyone one by one, romance is not appropriate here. Secondly, we all live mixed 1000 years. We speak the same language. And no one can understand where who and whom to adhere to. But everyone needs to understand this, otherwise we will grind ourselves into camp dust. We, our territory, is already lagging behind the surrounding countries by about 400-600 million people. This is exactly how much we have already ground over the past centuries. And also for 100 years of civilization.

The problem is also that in Russia there is always a non-Slavic government. With the exception of the dubious 300 years of the Romanovs, when the Germans had a noticeable influence. But the Slavs in Russia are 60%, they are the majority. How does the minority manage to seize power? This is done by irrational methods that defy logic. The last was the coming to power of the Finno-Ugric peoples in 1917 under the guise of a proletarian revolution armed with the theory of Marx. And for 100 years now, the Finno-Ugric have been playing tricks in Russia, robbing the Slavs, under the guise of collectivization, surplus appropriation and other crap. Another irrational transition took place during the reign of Gorbachev. For the last 30 years, the Finno-Ugric have allegedly been building democracy, but in fact, together with the Chechens = Khazars, they are again robbing the Slavic majority.

What awaits Russia? And the fate of Russia is sad. As is known from the experience of Khrushchev and modern science, hybrid corn, left to itself, inevitably degenerates, withers and disintegrates into its original genetic components. In the same way, Russia will wither and disintegrate, which consists of very

different and very many Slavic-Chinese hybrids. Small islands of small but pure peoples, either Slavs or Mongoloids, will remain in Russia. With some purely external differences, hair or skin color and the like. All other hybrid peoples will be ground from internecine wars, deformities and diseases, unwillingness to reproduce. Mules and hinnies don't want to breed.

Preliminary. Basic postulates.

Of course, evolution is based on Darwin.

Scientists from time to time ask questions of the following content. Why is humanity so detached in its evolution from the animal world? Why are there practically no "intermediate forms" of man between man and animals preserved anywhere? This gap is so great that it creates all the prerequisites for declaring man a divine creation.

Don't panic. There is nothing secret that would not be revealed. It is known from Darwin that evolution occurs when there are predators and herbivores. There is no evolution without predators. Predators eat off unsuccessful gene combinations, and progressive mutations lead to the evolution of herbivores. In turn, predators, which, during their hunt, can no longer catch up with the evolved herbivores, die. Of the predators, the most advanced survive. That is, predators also take a step in evolution. This is how animals evolve.

Is evolution to an intelligent creature possible among land animals? Unlikely. Because the way of life of terrestrial animals is too simple and does not favor the evolution of the brain. There is not much room for the brain to improve here. Even the system of hunting antelope or bull of a lion pride, once worked out, cannot be improved. Drive the victim in a circle, changing with partners in the pride, drive and bring down. Or drive to an ambush, where fresh partners are sitting, and also bring down. Herbivores have no fresh paths to evolve.

The evolution of monkeys is different. Evolution on trees. This is a real space for the evolution of the brain. Here you have an eye, and stereo vision, and stereo hearing, and coordination of movements, and sound signals to partners. Here you have the color spectrum. Here you also have a sound spectrum. Here you have an abundance of smells. Here you hunt for squirrels, birds (eggs). Collection of fruits. You can also jump on top of a gaping hare. You can even shower a lion with coconuts. You can steal a baby leopard and torture him in a tree or throw him down.

In contrast to the flat behavior of land animals, monkeys seem to have entered the third dimension. Hunting on trees is much more difficult and varied. Moreover, at any moment, both the fleeing and the attacker can fall down. Or it can hang on a thin twig and you can't get it (there are many similar stories on YouTube). Plus, it would be nice to know the geometry (stereo!) Of many surrounding trees. In which direction you can run, and in which you will be caught.

Thus, complex stereometric schemes and chase trajectories led to the rapid growth of the memory device, the brain. Plus, the eye, stereoscopic vision has developed. And gradually the brain became big and new functions could be accommodated in this big brain: spectral analysis of sounds (ear for music), spoken language, and everything that a person possesses today.

Cannibalism as an engine of evolution.

And it is important in evolution: here you are hunting for your own kind. It seems to the authors that it was the hunt for their own kind that became the engine of the evolution of monkeys, which led them to reason. Those ancient great apes who became our ancestors, they were cannibals. And all our ancient ancestors who had already become human were cannibals. That is, of course, they ate not only their own kind. They ate other animals and vegetation as well. But from time to time they attacked (better united in a flock) on relatives. And if the relatives have lagged

behind in evolution, then there will be no mercy and everyone will be tied up and gradually eaten.

It is very likely that among the ancient monkeys there was some division into carnivorous and frugivorous. Not carnivores, but fruit eaters. Herbivores and carnivores ran on the ground. Fruit-eating and carnivorous ones also rode in the trees. Everyone was merciless. The carnivores on the trees were apparently (and by analogy with terrestrial animals) somewhat smaller than the fruit-eaters. However, they acted collectively and this ensured the success of the hunt. It is very likely that today's dwarfs are the descendants of those ancient predators. And not only dwarfs, but also those who mercilessly rob and exploit workers. I mean bankers, business owners.

What is the power of cannibalism? Cannibals in their evolution destroy all non-evolved colleagues in appearance. That is why there were no intermediate links between man and ape. All stragglers and intermediate have been successfully eaten.

Cannibal monkeys have shot far ahead in their evolution. And even after descending to earth, they remained cannibals. On the ground, they opened up rich opportunities for hunting and vegetable growing. And in the trees there were many very predatory and dangerous monkeys. Such as Bear baboon, Chimpanzee, Gelada, Gorilla, Macaque, Mandrill, Anubis baboon. They are dangerous to humans.

Figure 02. Monkeys dangerous to humans.

However, primitive man did not become a man with a wolf's face. He got a kind, smiling face. Where has all the evil cannibalism gone? Here came the law of nature: everything is needed in moderation. Cannibalism hid, went into the depths. Someone is deeper, someone is not very much. It is not for nothing that they say and sing today: smile, and it will be easier for you to survive in society. But in principle, every person can be brought to cannibalism, for example, by hunger. The common manifestations of cannibalism are robbery, hooliganism, violence, sadism, and murder. Here's where they came from: Andrei Chikatilo (56 victims), Boris Bogdanov (15 victims). Vladimir Bychkov (9 victims). Irina Gaidamachuk (17 victims). Sergey Golovkin (11 victims). Nikolai Dudin (13 victims). Oleg Kuznetsov (10 victims). Vladimir Mirgorod (16 victims). Denis Pischikov (13 victims). Alexander Pichushkin (49 victims). Mikhail Popkov (22 victims) ... And finally, the highest form of cannibalism: organized fascism and genocide of entire nations.

Cannibalism awakens in a person when he feels impunity and easy profit. Then the basest instincts awaken in people, just as they woke up in Chubais. Then people unite in flocks, put forward some slogan, raise some bogey and jump into war on neighboring tribes. And how lucky there.

There is also a statistical distribution according to the degree of latent cannibalism in different people. Such a distribution exists

always and everywhere, in all peoples. In 1990, an opportunity to get rich suddenly opened up in Russia. And the cannibals woke up, hiding earlier among the communists, among propagandists, among party workers, among officials, among respectable citizens. Today, in 2021, about 80% of formerly active communists are in power. More peaceful and kind people were still sleeping peacefully, and the cannibals were already sharing property, vouchers, shares, privatizing, creating financial pyramids, canceling criminal laws, abolishing the death penalty, changing the constitution. Printed manuals on how to create an LLC with scanty authorized capital, not responsible for anything. And so they grabbed and are now trying with their radiant smiles and petty charity to inspire everyone that they are not cannibals at all, but peaceful kind people. That this is all normal, and in the west, too, everything is the same. And that they received all the wealth by accident, "being in the right place at the right time." But one should not hope that other people are much better. It's just that the cannibals in them wake up more slowly, somewhere deeper. The Russians are slowly harnessing ...

The basic concept of History.

Thus, the basic concept of True History is as follows. All human history consists of the raids of some small or large tribes and peoples on others. With such raids, as a rule, the men of the defeated people either die immediately during the defense, or they are destroyed later, or they are placed in such social conditions (slavery, serfdom), in which it is very problematic for them to continue the race. And women are raped during a raid, and later they are either taken as wives, in harems, or made slaves. Or they simply fertilize without any obligation. In any case, the main marker (haplogroup) of the new people is the marker of the conqueror. The conquerors settle in the houses and caves of the conquered. And they live as new owners. As in North America. Or like the Tatar-Mongols in the Slavic territories. There were no "hu-hu-hu" and "I beg you". Sometimes they give rise to a new

people mixed with the vanquished. As in South America. But such mixtures are counterproductive and lead to a long, drawn-out and endless civil war. And also to the degeneration of hybrids. The same thing is happening in South America as it is in Russia today. Hybrids seethe and gradually die out. Countries inevitably fall apart into small components.

In ancient times, haplogroups were not known. But they remembered the biographies of people. Where did who come from, what tribe. Friend or stranger. Aliens were quietly destroyed. As, for example, in Turkey, they destroyed all the Russians who either ended up as prisoners and stayed to live, or they themselves came to live. At the same time, the Armenians were also destroyed. Islam is very merciless towards aliens. And this is the truth of Nature itself. Different people cannot live together peacefully. There should be clear rules for living together. In particular, interethnic marriages are prohibited.

How raids are organized.

For a good organization of the invasion, already a modern highly developed person, it is imperative to create an ideology that "we are better", and our opponents are all scoundrels, scum, sadists and cannibals. As for example, today Americans are all "Pindos", and Ukrainians are pan-headed. As, for example, the American propaganda against the Indians did in due time, they say, the beasts are fierce, the most beautiful girls are sacrificed.

Or Bolshevik propaganda against wealthy citizens (mainly Slavs). The invasion also needs a banner, an exciting battle cry like "For the Revolution", "Glory to Ukraine" or "Allah Akbar" or "For the Motherland, for Stalin!" The Bolsheviks simply shouted "Hurray!"

One of the effective ideologies of antiquity, proving that "we are better, and they are worse," is Christianity. Everything is very clear here. We feel sorry for the crucified Christ, we are good and just. And they are not Christians, they are animals and creatures,

they crucified Christ, and for this we punish them, make a crusade and destroy (rob, rape) these peoples.

This was done with the American Indians, and with the Slavs during the baptism of Rus. Everything that concerns the baptism of Rus seems to have been reversed both in content and in chronology. Modern studies of ancient cemeteries and ancient drawings of churches show that crosses on gravestones and churches appeared only in the 18th century. This is the real date of the coming of Christianity to Russia. This is the real date of the composition of the entire world history.

Why was it necessary to invent a story? There is an offensive of reason, civilization on wild humanity, whether someone likes it or not. And the mind for the offensive needs a good historical foundation. This is the foundation that was invented.

Various types of bogey to attack.

Today, the Russian authorities are putting forward the bogey of "the fight against transvestites and fagots", shifting the center of gravity in this direction and forgetting that transvestites in the west) only 0.0001%.

Apparently, there were other ideologies and bogeymen in antiquity, which consolidated peoples to attack neighboring tribes. For example, such an ideology could be the ancient rite of circumcision of boys. This is the highest word in hygiene! We are the lights of culture! We have improved Nature itself! Such peoples considered themselves advanced.

It was not a bad ideology to have various idols, wood or stone. Who was worshiped and protected. Later, the strongest ideology was to have its own "holy book". This testified to the high level of the people and their right to destroy other peoples who did not have such a book. In principle, this is not far from the truth, because we see even today that people who are not friends with books, with texts, are doomed to a rather unenviable life.

Further, the sacred books and scriptures themselves have already begun to improve. Of the latest ideologies, these are

already the real ideologies of communism and democracy. Neither one nor the other really exists and cannot be built. But as an ideology for aggression against neighboring peoples it is very effective. They allow you to defame the enemy and raise the morale of the troops. A very unsuccessful attempt by the Ukrainians to make the battle cry "who does not ride is a Muscovite" became the ideology of Ukrainization. It takes strength to ride against Russia. We need unity. And this is not. Jumping 40 million against 140 million is not worth it.

There is no limit to the evolution of cannibals. Today we live in such a terrible time that factors unknown in nature come into play: nuclear weapons, means of mass zombification, huge capital accumulated by individuals. This can easily lead to the most dire consequences: the destruction of entire countries and peoples.

Literature. Boris Didenko. Cannibal civilization.

About the terms.

Many historians and disputants begin to tell when and for what reason this or that term arose. For example, Slavs or Russians. Here you can argue endlessly. We take this approach. All important terms are used by us in their today's meaning. And their etymology is relegated to secondary roles. If problems arise, you have to come up with new terms or select similar ones in meaning. For example, whether we like it or not, we have to call all Russian-speaking Finno-Ugric people Great Russians. Because there is such a term. We have not yet managed to come up with our own term. Although there is such an idea: Slavic-Yakuts.

Another point should be mentioned. The term "Turkic peoples" is often used, without understanding that this is just a linguistic characteristic. It has nothing to do with haplogroups and biology. For this reason, the Yakuts are referred to as Turks, although they are clearly pronounced Mongoloids. Just a cormorant in the Turkic language. And the Turks themselves can be both Erbins (R1b) and Slavs (R1a). We use the terms in their more modern meaning, implying that the Slavs are R1a.

By the way, the multiplication of many languages also undoubtedly happened (especially in recent centuries) due to hostility to the mentality of neighboring peoples. People stubbornly refuse to unite in large "collective farms" and speak the same language. Therefore, they make differences in their alphabets, dictionaries, grammar. Today we are witnessing how the Ukrainian people are leaving Russia, switching to their own MOV. What no, but its own.

Predator-prey relationship.

If you look very closely at the predator-prey relationship, you can catch the following philosophical aspect of this relationship. The philosophy of the victim is simple: you need to flee with all your might, and if they surround you, then wave your horns and kick your feet to the last. There is no time to think and there is nothing to invent. Horns and hooves have long been invented by nature. But the philosophy of the predator is more meaningful. And if it is adequately evaluated, then the philosophy of the predator consists in the manifestation and use of reason. Even the most primitive wolves and jackals use their minds. What is it? 1) It is necessary to sneak up on the victim from the leeward side (!) So that she does not catch the smell. 2) Most often they hunt in a pack, which means that a pack of hunters needs to settle in suitable places in advance in order to change in the process of the chase, and make an ambush in the place where the fleeing victim will suddenly try to turn. That is, this requires not weak geometric thinking, but also an intuitive assessment of speeds and times. And all this without unnecessary talk and discussion, without any talk at all! Everyone should understand this for himself. If all this is not appreciated, then the victim will leave.

In full glory, lionesses use these techniques when hunting. They have everything clearly debugged, and the change during the pursuit, and the ambush.

Figure 03. Hunting lionesses.

How do we behave so as not to die out?

How should humanity behave in order not to die out? We underestimate the magnitude of the danger looming over us. Remember the mouse paradise experiments? The mice were given everything. Food, territory, medicine, housing. But the herd of mice went mad with happiness and died out. Something similar is happening today with humanity. In order not to die out, we must avoid influencing the evolution of all scientific achievements.

Of course, the definition of "scientific achievement" is rather vague. A bow with arrows, a spear, a stone on a stick and a sling can be considered scientific achievements. However, these are all means of individual defense and attack. And with the development of civilization, means of mass influence appear. And these funds are extremely dangerous for the existence of mankind.

These are the means according to the degree of danger: 1) means of mass destruction: nuclear weapons, bacteriological weapons, chemical weapons. 2) mass media: newspapers, television, radio, telephone, internet. 3) books. On the other hand, the development of science cannot be impeded, otherwise we will lose control over ourselves. This means that all the listed means of mass influence must exist. Humanity must maneuver between prohibitions and permissions.

4) Only family people with children (?) Should be elected to the country's leadership. For only they correctly understand the psychology of the people.

Axioms taken from the ceiling. Like: learn a language and live in any country. Bring a million dollars and you are a citizen of any country. All nations are equal and can enter into inter-ethnic marriages. And the like. These axioms must be carefully revised, and interethnic marriages must be strictly prohibited. Look at which countries are multiplying today. These are mono-national countries. China, Muslims. And all countries where the "equality of peoples" is proclaimed, they do not have an increase.

Live together, work together, communicate, be friends, but do not enter into interethnic marriages. Don't spoil your genetics. And we use the opposite principle: do not make kindred marriages. That is, carry your tainted genes to the surrounding humanity.

The same goes for outstanding personalities. They are usually outstanding due to gene chromosomal abnormalities. And it is to such outstanding personalities that family marriages are strictly prohibited. Which inevitably lead to degeneration and deformities.

A deadly argument for the inversion of the whole story.

I came across this by accident, today, 11/23/2011, while browsing Wikipedia. I confess that later I found this example in Fomenko-Nosovsky, who had dozens of similar examples. See a comparison of the two chronologies. Laugh. Today, scientific officials forbid us to revise and correct this.

Comparison of the years of the reign of the Roman Kings (the era of the kings) and the French Merovingian.

- The first thing that is curious, the so-called. "The era of the Roman kings" in duration exactly coincides with the era of the Merovingians in France. That is 240 years. There are no more Roman kings, followed by emperors and others. It was she, the era of the Merovingians, that was taken as a basis, for the truth.

- The second is that each Roman "king" ruled for the duration roughly as a "pack" of several French kings. Apparently, historians were too lazy to compose an analogue of each king. And only the very last "Roman king" is, as it were, a mirror image of the single, very first Merovingian.

- Third, it is that the years of reign of each of these "Roman kings" (BC) to within a year or two coincide with the years of reign of the "pack" of French Merovingians, only mirrored relative to the beginning of our era. Roman - BC, Merovingians - already in our era.

Further text from Wikipedia.

Ancient Roman kings (Latin Reges Romae) are legendary and semi-legendary rulers of Ancient Rome in the so-called royal period before the founding of the Republic. Roman primary sources (including Titus Livy) mention seven kings:

<u>Древнеримские цари</u>		<u>Французские Меровинги</u>	
Римский Царь	Годы правления (до н.э.!)	Франкский Король	Годы правления (наша эра!)
Ромул	753 - 716	Хлотар IV Хильперик II Теодорик IV междоусобице	717 - 720 720 - 721 721 - 737 737 - 743

		Хильдерик III	743 - 751
Нума Помпилий	715 - 674	Дагоберт II междоусобица Теодорик III Хлодвиг IV Хильдеберт III Дагоберт III Хильперик II	676 - 679 679 - 687 687 - 691 691 - 695 695 - 711 711 - 715 715 - 717
Тулл Гостилий	673 - 642	Сигеберт III Хильдеберт - Приемный Хлотар III Хильдерик II Хлодвиг III	634 - 656 656 - 661 661 - 662 662 - 675 675 - 676
Анк Марций	642 - 617	Хлотар II Дагоберт I	613 - 623 623 - 634
Луций Тарквиний Приск	616 - 579	Хильдеберт II Теодоберт II Теодорик II Сигеберт II	575 - 595 595 - 612 612 - 613 613
Сервий Туллий	578 - 535	Теодоберт I Теодобальд Хлотар I Сигеберт I	534 - 548 548 - 555 555 - 561 561 - 575
Луций Тарквиний Гордый	535 - 509	Теодорик I	511 - 534

Figure 04.

The personalities of the Roman kings reflect the ideas of the Romans about their distant ancestors. The kings themselves were subsequently equated with deities, their golden statues were allegedly installed at the forum in Rome. And then, they were

allegedly melted down in 410 in order to buy off Alaric. Within the framework of the tsarist era, not only the state arose, but also the most important elements of the socio-political organization that was developing already in the republican period - the Roman polis.

Comments on the "Roman kings".

1) Well, now we have an idea of what the "legendary" and "semi-legendary" Roman rulers are.

2) We now have an idea of what the "Roman Primary Sources" and in particular "Titus Livy" are.

3) About the golden statues. Well, of course, everything was melted down, because it was all invented! How else?! To pay off. Everything is trite. Nothing changes over the centuries. As they fought in the streets before our era, so they fight in interstellar ships in Alpha - Centauri ...

4) As a result of this manipulation alone, the history of Western European civilization is lengthened by 240 nonexistent years. This is provided that all other chapters of Western history are accurate. Where there are strong doubts. Because it seems that by acting according to the same method, it will be possible to find many other similar falsifications. And they were found by Fomenko-Nosovsky.

5) In the light of the above, the version from Nosovsky - Fomenko about the trinity of our Tsar Ivan the Terrible becomes very relevant. Which ruled for a suspiciously long time and was suspiciously of a different nature in different situations. A few more decades of reign like the current one and our kings will also be gathered in "packs" and there will be 3-4 tsars. The rest of Russian history will be melted down.

To this can be added words about the inertia of the social consciousness of mankind. After all, hundreds and thousands of times have proven biblical lies. But no one cancels or cancels the Bible. Hundreds of times historians will find fakes. But no one will cancel these fakes. If only for such a simple reason that it is

very difficult to undo a fake. It is woven into the overall fabric of the story. It is woven into the public consciousness of millions. And it is not possible to retrain thousands of people at once. And most importantly, the churchmen need this fake. They make money on this deception.

Preliminary. The documents.

Basic historical facts.

As the latest studies by young energetic historians of old churches and old cemeteries show, Christianity came to Russia only in the 18th century. Only in the 18th century did crosses appear on churches and on tombstones. All major historical works were written in the 17th and 18th centuries. Thus, taking into account the opinions of many authoritative historians, all supposedly "ancient" stories about the Ruriks, the baptism of Rus by Prince Vladimir and others can be considered nothing more than invented legends. After all, it is an absolutely strange fact: with such fertility of tsarist families in modern Russia, there is not a single descendant of Ruriks in the male line. On the female side, they are credited with kinship with the Ruriks Mikhalkov and Tolstoy. It is understandable, all peoples come up with a story for themselves. Fomenko and Nosovsky spoke authoritatively about this. However, if you carefully observe Nikita Mikhalkov and Tatyana Tolstaya, then their inadequate Finno-Ugric ambition is very noticeable. As a rule, he is not backed up by any talents, skills, knowledge.

Chronology of solar eclipses. Who watched them.

And one more reliable information. This is information about eclipses. They are taken from publicly available sources. Eclipse dates allow you to compare the chronology of events in different parts of the globe.

Solar eclipse on October 5, 693. This is the 7th century AD.
Romans Gauls Hellenes Persians Formation of the Roman Republic, Latin alphabet

Solar eclipse on April 5, 916. This is the 10th century AD.
Sarmatians Kazakhstan Huns Mongolia

Solar eclipse on April 7, 1000. This is the 11th century AD.
Muslim Arabs Rise of Islam Rajputs India Chinese-2 North China Koreans Yamato

Solar eclipse on November 12, 1026. This is the 11th century AD.
Mongols Empire of Genghis Khan

The solar eclipse on August 2, 1133 and the eclipse on July 23, 1134. This is the 12th century AD. Goths southern Sweden Slavs Daki Christians. Syria Palestine. The emergence of Christianity

The solar eclipse on September 4, 1187 and the eclipse on August 24, 1188. This is the 12th century AD. Lithuanians Great Russians Ottoman Turks Ethiopians

Solar eclipse on January 31, 1310. This is the 14th century AD.
Spaniards. Franks. Saxons. The split of Charlemagne's empire. Scandinavia. The beginning of the Viking movement

This is the real chronology of the history of our Civilization.

7-8 century AD. Romans Gauls Hellenes Persians Formation of the Roman Republic, Latin alphabet

10-11 century AD. Sarmatians Kazakhstan Huns Mongolia

11-12 century AD. Muslim Arabs Rise of Islam Rajputs India Chinese-2 North China Koreans Yamato

11-12 century AD. Mongols Empire of Genghis Khan

12-13 century AD. Goths southern Sweden Slavs Daki Christians. Syria Palestine. The rise of Christianity

12-13 century AD. Lithuanians Great Russians Ottoman Turks Ethiopians

14-15th century AD. Spaniards. Franks. Saxons. The split of Charlemagne's empire. Scandinavia. The beginning of the Viking movement

Eclipses are a very reliable historical source for dating events.

Common chronology. BC.

Based on materials from <https://humanhistorytimeline.com/>.

It should be said that this chronology is largely refuted by objective data and research by Fomenko-Nosovsky. This is a very extended chronology, on average, about 2 times in time. Except for the last 300 years.

Unified timeline.

200,000 BC Homo Sapiens, the first modern humans, appear in Africa.

62,000 BC A bow and arrows with stone sharpenings (arrowheads) are used.

30,000 BC Cro-Magnons are thriving, moving from the Middle East to Europe, hunting and gathering. Painted Cro-Magnon caves with drawings of animals they killed.

25,000 BC People cross the Bering Strait, connecting Asia with America.

18000 BC Pottery created. People are starting to use raw metals.

10,000 BC People get to the southernmost point of South America.

8000 BC The Neolithic Revolution and agricultural lifestyle are discovered in the Fertile Crescent / Middle East area. Cows and sheep were domesticated and crops were cultivated. The first domestic dog was found in Idaho, USA, 8400 BC.

7000 BC A great earthquake destroys the city of Jericho.

6500 BC England is cut off from Europe by land.

6000 BC The first beer brewed from grain in the Middle East.

5500 BC The first settlements in the Mesopotamian region.

4500 BC People learn to use the plow.

4250 BC Development of copper and bronze metallurgy (?).

4242 BC The very first year according to the Egyptian calendar.

4000 BC The wheel is invented and is being used. Rice growing is well developed in China.

3400 BC Initial forms of writing. The earliest ziggurats are built.

3300 BC The Indus Valley Civilization is based in South Asia.

3200 BC Boats use sails on the Nile River.

3113 BC First date on the Mayan calendar.

3100 BC 1st Dynasty of Egypt, created by the union of the upper and lower kingdoms of Egypt.

3000 BC Bricks are widely used and made by firing. The first city-states were created, palaces were built. Temples are usually built in the city center. Large military campaigns of ethnic groups of people.

2750 BC Rule of Gilgamesh. King Uruk.

2686 BC The beginning of the Old Kingdom of Egypt, also known as the "Age of the Pyramids".

2667 BC The very first pyramids in Egypt.

2500 BC The first written legal codes.

2400 BC Construction of Stonehenge begins in England.

1,792 BC Hammurabi begins his reign as king.

1766 BC The Shang dynasty begins in the Lower Valley of the Yellow River (China).

1570 BC The beginning of the New Kingdom of Egypt.

1531 BC The Hittites conquer Babylon.

1333 BC Young Tutankhamun becomes Akhenaten's successor. He teaches the nation to worship the ancient Egyptian gods.

1250 BC Ziggurat in Khuzestan, currently built by Iran. Moses leads the Israelites to the exodus from Egypt.

1200 BC Moses leads his people out of Egypt.

1140 BC The first North African city of Utica (Tunisia) was founded by the Phoenicians.

1126 BC Nebuchadnezzar I begins his reign as king of Babylon.

1122 BC The Chou Dynasty was formed in China by Emperor Wu Wang. The feudal system is as follows.

1077 BC The New Kingdom phase in Egypt ended after the death of Ramses XI. Smendes dates back to the pharaoh and forms the XXI dynasty.

1070 BC Kingdom of Kush begins in Nubia.

1050 BC Israel is occupied and defeated by the Philistines.

1020 BC Saul is Israel's anointed king and one of the last remaining Israeli judges.

1000 BC At the Battle of Gilboa, Saul is killed and David ascends the throne.

961 BC David dies and his throne is replaced by his son Solomon.

953 BC The dedication of the temple in Jerusalem was built by Solomon.

922 BC Solomon dies, and his throne is replaced by his son Rehoboam, who soon after ascending is threatened with rebellion.

814 BC Carthage was founded by the Phoenicians near Utica.

800 BC Homer writes The Iliad and The Odyssey.

776 BC The very first registered Olympic Games are set in Greece.

770 BC The eastern Zhou dynasty in China begins.

483 BC Buddha dies in India.

460 BC Hippocrates was born.

431 BC The Peloponnesian War between Athens and Sparta begins.

404 BC The government of thirty tyrants begins. The Spartans defeat the Athenians to end the Peloponnesian War.

394 BC The Spartan troops are victorious at Coronea.

390 BC Rome is plundered by Gauls from France.

386 BC Antalcis Spartan concludes a peace treaty with Persia.

377 BC Hippocrates dies.

371 BC Sparta and the League of Athens conclude a peace treaty.

367 BC Rome elects its first member of the plebeian council.

356 BC The third holy war begins.

339 BC The fourth holy war begins.

336 BC Philip Macedonian killed.

332 BC Alexander the Great invades Egypt and founds the city of Alexandria.

264 BC The first Punic War begins.

221 BC China united under the rule of Shi Huangdi, the first emperor of China.

218 BC The second Punic War begins - also known as the War against Hannibal.

214 BC Construction of the Great Wall of China begins.

204 BC Construction completed on the Great Wall of China.
180 BC The great altar of Zeus and Athena was built in Pergamum.
168 BC Roman troops defeat Perseus at the Battle of Pydna.
149 BC The Third Punic War begins.
141 BC The Jewish people liberate Jerusalem.
140 BC Wu (Liu Che) becomes the "War Emperor" of China.
89 BC First Mithridatic War.
63 BC Judea is invaded by the Roman Empire.
53 BC Battle of Carr between the Parthian and Roman empires.
50 BC Julius Caesar conquers France.
45 BC Caesar becomes dictator of Rome.
44 BC Caesar is killed.
30 BC Egypt is absorbed and becomes a province of the current Roman Empire.
27 BC Augustus begins his reign of the Roman Empire as the first Roman emperor.
5 BC Jesus was born in Bethlehem.

Common chronology. Our era.

A.D. 14 Death of Augustus, the first emperor of the Roman Empire.
A.D. 18 Publius Ovid Naso (Ovid), poet of Heroids, Amores and Metamorphoses, dies.
A.D. 27 Jesus is baptized by John the Baptist.
AD 30 John the Baptist is executed.
AD 30 Crucifixion of Jesus by order of Pilate.
A.D. 34 The disciple Paul visits Jerusalem for the first time.
A.D. 41 Caligula is killed as a result of his extravagance and desire for unlimited personal power.
AD 43 London (lat. Londinium) was founded by the Romans.
A.D. 45 The disciple (apostle) Paul begins his missionary work.
AD 59 Agrippina is killed by her son Nero.
A.D. 64 A great fire destroys most of Rome.
AD 66 The Gospel of Mark is the first gospel.

AD 68 Death of the Roman Emperor Nero.
70 AD Gospel of Matthew, part of the Bible is written.
A.D. 75 The Gospel of Luke is written in the Bible.
A.D. 79 The volcano Vesuvius erupts, spewing lava so quickly that it has preserved the city of Pompeii. Titus is the current emperor of Rome.
A.D. 80 Roman Colosseum and Baths of Titus completed.
95 AD The Gospel of John and the Book of Revelations are written.
105 AD Tsai Lun creates a papermaking process in China.
126 A.D. The Roman Pantheon was built in Rome.
AD 130 The new capital of Egypt, Antinopolis, has been created.
AD 161 Marcus Aurelius becomes Emperor of Rome.
AD 166 Marcus Aurelius sends gifts to Emperor Huang Ti.
A.D. 217 Macrinus becomes the new emperor of Rome.
A.D. 220 China. The end of the Han dynasty and the "imperial age". The "Three Kingdoms" period begins until 265 AD.
A.D. 222 Alexander Severus becomes Emperor of Rome.
A.D. 227 Ardashir founded a new Persian empire.
AD 230 Japan's first known ruler, Emperor Sujin, is documented.
AD 235 Maximinus Frax becomes Emperor of Rome.
AD 238 Gordian III becomes Emperor of Rome.
A.D. 249 Decius becomes Emperor of Rome.
AD 250 Decius persecutes Christians.
A.D. 251 Gallus becomes emperor of Rome, Decius dies in a battle with the Goths.
A.D. 253 Valerian becomes emperor of Rome, shares the throne with his son, Gallienus.
268 A.D. Claudius II becomes Emperor of Rome.
AD 270 Aurelian becomes Emperor of Rome.
A.D. 275 Tacitus becomes Emperor of Rome, killed by his own troops a year later.
A.D. 276 Probus becomes Emperor of Rome.
282 A.D. Carus becomes Emperor of Rome, assassinated by his own troops a year later.

284 A.D. Diocletian becomes Emperor of Rome.
286 A.D. The Roman Empire is divided by Diocletian, he rules the East, Maxiam rules the West.
AD 303 Christians are persecuted by Diocletian.
AD 306 Constantine I (known as Constantine the Great) becomes Emperor of Rome in the Eastern Kingdom.
AD 308 Maxentius becomes Emperor of Rome in the Western Kingdom.
312 A.D. Maxentius is killed at the Battle of Milvian Bride. Constantine converts to Christianity.
A.D. 313 Constantine unites all of Rome and issues the Edict of Milan. The "Edict of Tolerance" is proclaimed, and Constantine allows Christianity in his kingdom.
A.D. 324 The Eastern and Western kingdoms of Rome were reunited by Constantine.
330 A.D. Constantinople was formed by Constantine and is the new capital of the Roman kingdom.
337 A.D. Constantine dies, baptized on his deathbed.
AD 391 The Roman Empire makes Christianity the official religion.
410 A.D. Rome is sacked by the Goths.
AD 428 Saint Patrick begins his missionary work in Ireland.
440 A.D. The Leo, known as Leo the Great, becomes a pope.
475 AD Romulus Augustus becomes emperor.
590 A.D. Gregory I, known as Gregory the Great, becomes pope.
AD 593 Suiko becomes the new empress of Japan.
604 A.D. Construction of the Grand Canal begins in China.
610 A.D. The vision of Muhammad.
624 A.D. Aisha and Muhammad are married.
625 A.D. Muhammad begins to dictate the Koran.
632 A.D. Death of Muhammad.
639 The Muslim conquest of Egypt begins.
814 A.D. Arabs are starting to use Indian numbers from 0 to 9.
832 A.D. The city of Baghdad was founded and becomes a city of learning.

843 A.D. The Treaty of Verdun is signed and divides the current Frankish Empire into 3 (east of the Rhine, France, and then Italy, Provence, Burgundy and Lorraine).

844 A.D. The Picts are defeated by Kenneth McAlpine (King of Scots) and a new united Scotland is created.

AD 850 Muslim scholars from Tabari compile the medical works of Greece, Rome, Persia and India.

861 A.D. Iceland is discovered by exploring the Vikings.

1082 A.D. The troops of King Henry IV storm Rome.

1085 A.D. The Moors lose Toledo Alfonso VI.

1086 A.D. Canute IV of Denmark killed.

1088 A.D. Urban II becomes the new pope.

1096 A.D. The first crusade begins at the urging of Pope Urban.

1098 A.D. The Crusaders defeat the Saracens in Antioch.

1099 A.D. Jerusalem is captured by the crusaders.

1108 A.D. Louis VI becomes the new king of France.

1111 A.D. Henry V becomes Holy Roman Emperor.

1139 A.D. Alfonso becomes the first king of Portugal.

1141 A.D. The Chinese defeated the Muslim ruler of Persia.

1145 A.D. The second crusade begins.

1156 A.D. The military class struggle begins in Japan.

1174 A.D. Syria is conquered by Saladin.

1177 A.D. Saladin is defeated by Baldwin IV at Montgisard.

1180 A.D. A truce is concluded between Saladin and Baldwin IV.

1182 A.D. Jews expelled from France by Philip II.

1211 A.D. Mongols invade China.

1219 A.D. Mongols invade Persia.

1258 A.D. The Mongols destroy Baghdad.

1297 A.D. William Wallace, Scottish man defeats the English army at the Battle of Stirling Bridge.

1300 A.D. Wenceslas II becomes the new king of Poland.

AD 1304 Petrarch, famous Italian poet was born.

1328 A.D. Philip VI becomes King of France.

1368 A.D. The Ming Dynasty formed in China.

1412 A.D. Joan of Arc (Joan of Arc) was born.

1413 A.D. Henry V becomes King of England.
1421 A.D. China calls Beijing its capital.
1422 A.D. Death of Henry V (England) and Charles VI (France).
1453 A.D. The Hundred Years War is coming to an end.
1458 A.D. Athens is captured by the Ottomans.
A.D. 1492 Christopher Columbus discovered America in search of a shorter route to India.
1590 A.D. The first flush toilet was invented by John Harrington.
1606 A.D. Japan bans Christianity.
1607 A.D. Jamestown, Virginia, a colony in North America.
1608 AD Hans Lippershey is trying to get a patent for a telescope. This marks the first official documentation of the telescope as an invention.
1609 A.D. Galileo Galilei is the first to observe the stars with a telescope.
1610 A.D. The theory of relative motion was put forward by Galileo Galileo.
1618 A.D. The beginning of the Thirty Years War, started by the Defenestrations of Prague.
1619 A.D. The first batch of African slaves arrived in Virginia to work on tobacco plantations.
1620 A.D. Pilgrims from England, sailing on the Mayflower ship, arrive in America and establish a colony at Plymouth.
1621 A.D. Philip IV becomes the next king of Spain. In America, Pilgrims celebrate the First Thanksgiving Day after a bountiful harvest.
1624 A.D. The Dutch founded New Amsterdam (New York).
1631 A.D. Construction of the Taj Mahal begins.
1642 A.D. Montreal was founded by the Dutch. English Civil War.
1648 A.D. Taj Mahal completed, used as a tomb for the wife of Emperor Shah Jahan. The Treaty of Westphalia is signed, ending the Thirty Years' War.
1652 A.D. Cape Town was founded by the Dutch. Anglo-Dutch War.

1665 A.D. The plague is spreading across London.
1666 A.D. Great Fire of London.
1676 A.D. The Polish-Ottoman War ends.
1682 A.D. Peter the Great was born.
1683 A.D. The Great Turkish War begins.
1686 A.D. Isaac Newton publishes his laws.
1687 A.D. Sir Isaac Newton talks about his theory of gravity and the three laws of motion.
1689 A.D. Nerchinsk Treaty between Russia and China.
1696 A.D. Peter is the only ruler of Russia.
1701 A.D. Seeder invented by Jethro Tull.
1703 A.D. Peter the Great wins Nyenschantz from the Swedes and calls it Petersburg. Later historians will twist that Peter built Petersburg.
1725 A.D. Peter the Great dies.
1744 King George's war begins.
1747 A.D. Nader Shah is killed.
1754 The French and Indian War breaks out.
1755 A.D. The Lisbon earthquake killed between 10,000 and 100,000 people.
1757 A.D. British rule is established in India.
1763 A.D. The French and Indian Wars are over.
1765 AD American Colonies Postage Stamps Act.
1770 A.D. Boston massacre.
1773 A.D. Boston Tea Party.
1774 A.D. The First Continental Congress is formed to counter British rule in America.
1775 The American Revolutionary War begins.
1776 A.D. On July 4, the Declaration of Independence was signed.
1783 A.D. The American Revolutionary War ends.
1787 A.D. The United States Constitution is signed into the Federal Convention.
1788 A.D. The Times is first created and published in London.

1789 A.D. George Washington is elected as the first president of the United States.

1791 A.D. Human Rights, written by Thomas Payne, published. The Bill of Rights, which is 10 amendments to the US Constitution, has been approved.

1797 A.D. The parachute is invented.

1803 A.D. Britain and France go to war. France is selling territory west of the Mississippi to the United States in what is called the Louisiana Purchase.

1804 A.D. The world's population reaches 1 billion.

1807 A.D. The slave trade in Britain has been abolished under the Slave Trade Act.

1812 A.D. The United States and Great Britain go to war.

1814 A.D. Missionaries colonize New Zealand.

1815 A.D. Battle of Waterloo. Vienna Treaty signed.

1820 A.D. Missouri Compromise Accepted - Banning Slavery in the North and West of the State.

1830 A.D. The Book of Mormon Published by José Thomas Smith.

1832 A.D. The foundations of modern democracy were laid with the adoption of the Great Reform.

1835 A.D. Texas declares its independence from Mexico, known as the Texas Revolution.

1836 A.D. Battle of the Alamo - The Mexican army storms a Texas fort known as the Alamo. The United States adopts a resolution recognizing the independence of Texas.

1841 A.D. The 2,000-mile Oregon Trail in America opens.

1844 A.D. The telegraph is invented.

1845 A.D. The United States annexes Texas.

1848 A.D. Karl Marx and Friedrich Engels publish The Communist Manifesto.

1849 A.D. The discovery of gold in California leads to a gold rush.

1850 A.D. The Fugitive Slave Act (USA) was passed, according to which every citizen had to help in the return of escaped slaves.

1853 A.D. The Crimean War begins.

1854 A.D. The Kansas-Nebraska (USA) state of the territory of Kansas and Nebraska was passed. The Republican Party is founded against both the law and slavery.

1856 A.D. The Crimean War ends.

1859 A.D. Charles Darwin publishes his article On the Origin of Species, which describes evolution and natural selection.

1861 A.D. The American Civil War begins. The Gatling pistol is invented.

1863 A.D. Abraham Lincoln issues the Declaration of Emancipation - a change in the status of many people in the southern United States from slavery to freedom. Battle of Gettysburg.

1865 A.D. The United States Abolishes Slavery with the Thirteenth Amendment to the United States Constitution.

1867 A.D. Alaska is acquired from Russia by the United States. The Reconstruction Act allows the southern states of the United States to rejoin the Union. Explosive dynamite and typewriter are invented.

1868 A.D. DNA found.

1869 A.D. The Suez Canal opens. The first Transcontinental Railroad is completed in the United States.

1870 A.D. US Constitutional Amendment 15 passed, giving African Americans the right to vote.

1871 A.D. The fire burns down most of the city of Chicago.

1876 A.D. Alexander Graham Bell patented the first practical telephone.

1879 A.D. Thomas Edison invents the first successful light bulb.

1890 A.D. Native Americans killed in the Battle of Wounded Knee.

1901 A.D. Queen Victoria of England dies.

1903 A.D. The Wright brothers make their first flights.

1905 A.D. Albert Einstein publishes his theory of special relativity.

1907 A.D. The first manned helicopter in France.

1914 A.D. The beginning of the First World War.

1916 A.D. Albert Einstein publishes his theory of general relativity.

1917 A.D. The scientific principles of the laser were defined by Albert Einstein. The United States enters the First World War.

1918 A.D. World War I ends.

1919 A.D. The sale of alcohol is prohibited by the 18th US Constitutional Amendment.

A.D. 1920 The first public radio station opened in the UK. The 19th US Constitutional Amendment gives women the right to vote.

1927 A.D. Charles Lindbergh is the first person to fly solo across the Atlantic Ocean. The idea that the universe began in a Big Bang was developed by Abbot George Lemaitre. The world's population reaches 2 billion.

1928 A.D. Penicillin was accidentally discovered by Alexander Flemming.

1929 A.D. NYSE (New York Stock Exchange) falls after a panic that caused a sell-off in shares.

1933 A.D. The New Deal was launched by US President Roosevelt.

1936 A.D. The beginning of the Spanish Civil War.

1939 A.D. The beginning of the Second World War. The Spanish Civil War ends.

1941 A.D. Pearl Harbor in Hawaii was attacked by the Japanese. The United States enters World War II.

1945 A.D. The atomic bomb is dropped and World War II ends when Japan surrenders. The United Nations Organization (UN) was created after the Second World War.

1947 A.D. India and Pakistan are founded (gained independence).

1948 A.D. Mahatma Gandhi, leader of the Indian independence movement against British rule, was assassinated.

1949 A.D. The Communist Party led by Mao Zedong comes to power in China.

1953 A.D. The Cuban Revolution, led by Fidel Castro, begins.

1955 A.D. The beginning of the Vietnam War.
1959 A.D. The world's population reaches 3 billion.
1961 A.D. The Berlin Wall is built, divides Germany.
1963 A.D. John F. Kennedy (JFK) assassinated.
1965 A.D. Great Britain abolishes the death penalty for murder.
1967 A.D. The United States, Great Britain and the Soviet Union sign a treaty banning the use of nuclear weapons in outer space.
1968 A.D. Civil Rights Leader Martin Luther King (MLK) assassinated. Robert F. Kennedy is also assassinated.
1969 AD Neil Armstrong is the first person to walk on the moon.
1974 A.D. President Nixon (USA) is forced to resign after the Watergate scandal. The world population reaches 4 billion people.
1975 A.D. End of the Vietnam War.
1978 A.D. John Paul II was elected the first non-Italian pope in over 450 years. The Iranian Revolution begins.
1979 A.D. Margaret Thatcher was elected the first female prime minister of England. The Shah of Iran leaves the country and the exiled religious leader Ayatollah Khomeini returns.
1980 A.D. the Iranian-Iraqi war begins (until 1988).
1981 A.D. Egyptian President Sadat assassinated.
1985 A.D. Mikhail Gorbachev becomes Soviet leader.
1986 A.D. US space shuttle Challenger explodes after launch - killing all 7 on board
1987 A.D. Portugal agrees to return Macau to China in 1999. The world population reaches 5 billion people.
1988 A.D. The Iran-Iraq War ends.
1989 A.D. The Berlin Wall is torn down and communist rule ends in East Germany.
1990 A.D. Launch of the Hubble Space Telescope.
1991 AD The Soviet Union is falling apart. NATO is being drawn into Yugoslavia.
1992 A.D. Bill Clinton is elected 42nd President of the United States.
1994 A.D. Free elections in South Africa, Nelson Mandela elected president.

1995 A.D. The Oklahoma City bombing leaves 168 dead.

1997 Hong Kong returns to China from the UK.

1999 A.D. The world population reaches 6 billion.

2000 A.D. George W. Bush was elected 43rd President of the United States. The year 2000 problem arises.

2001 A.D. Al Qaeda attacks the United States by flying planes to New York's World Trade Center. Launched an online encyclopedia that anyone can edit, Wikipedia.

2002 A.D. Euro currency introduced - seventeen countries jointly adopted the new currency. US opens Guantanamo Bay, a camp for illegal fighting.

2003 A.D. The United States invades Iraq. Saddam Hussein is captured by US troops.

2004 A.D. A massive 9 magnitude earthquake in the Indian Ocean leads to a huge tsunami that killed more than 230,000 people. The social network Facebook is founded.

2005 A.D. Hurricane Katrina ravages the American city of New Orleans.

2006 A.D. Saddam Hussein executed for crimes against humanity.

2007 year. Apple launches the iPhone touchscreen smartphone that is changing the way we use our phones. The 2008 global financial crisis begins.

2008 year. Barack Obama has been elected the 44th President of the United States and the first African American President. The Large Hadron Collider, a machine to recreate the elements of the Big Bang, has been completed on the French-Swiss border.

2010 year. The largest accidental offshore oil spill in the world occurs when the Deepwater Horizon offshore drilling rig explodes.

2011 A.D. Osama bin Laden, founder of al-Qaeda, was killed in Pakistan by US SEALs (SEAL Six). Occupy Wall Street movement begins. A massive earthquake and tsunami kill more than 15,000 people and destroy the Fukushima nuclear power plant in Japan. The revolutionary uprisings of the Arab Spring are

taking place in North Africa and the Middle East. The world population reaches 7 billion people.

year 2012. More than 1 billion people actively use the social network Facebook. Barack Obama is re-elected President of the United States.

year 2013. Former CIA officer Edward Snowden publishes unauthorized classified information about how the National Security Agency (NSA) spied on the United States and other citizens around the world.

2016 A.D. Donald J. Trump is elected 45th President of the United States.

2017 A.D. More than 2 billion people use Facebook.

2019 year. The COVID-19 (coronavirus) pandemic begins in Wuhan, China.

In the listed series of events, one can believe only the last 300 years. Everything else is very ephemeral.

Preliminary. Biology.

What is the meaning of Life on Earth?

The fact is that the concept of "the meaning of life" does not include the prediction of the near or distant future. The meaning of life is local, it is applicable only for a given moment in time.

If you look at humanity from the perspective of large time scales, then all our troubles and aspirations are worthless. Well, there were, for example, dinosaurs. For 60 million years they lived, fought, killed each other. Then they became extinct. What is left of them? Nothing. Only bones are lying around in places. However, the dinosaurs had a *raison d'être*. And this meaning was in constant survival. And to survive you need protection from enemies, from bad weather and the search for food. That's the whole meaning of life.

The same will remain for humanity. 100 years ago, no one knew that we (that is, contemporaries) would appear. In 100 years, no

one will remember us, as if we had never existed. And today we are living, fighting, experiencing. For what? For the same "protection from enemies, from bad weather and the search for food."

We know that life arises from dead matter as a result of constant solar photon pressure. Life is not a unique cosmic phenomenon. Life arises in every puddle under the rays of the sun. Carbon is capable of forming carbon chains. This is an absolute property of the element. Under the rays of the Sun, a photon is absorbed by a long carbon molecule, the photon energy inside the molecule is ground into small energy quanta, then the vibrational return of small thermal quanta to the surrounding water, and a self-propelled molecular chain is formed due to vibrations. Self-propelled molecules are already living molecules. These are pansperms. Like little snakes, they begin to wriggle with excess energy, splashing energy onto surrounding molecules and simultaneously attaching atoms and molecules that meet, increasing in size. They go beyond the laws of chemical kinetics and begin their own evolution. Life under the rays of the Sun arises every second in billions of places in each puddle. The pressure from the Sun makes the molecular carbon chains move. This is how pansperms arise.

What's next? So trillions of carbon chains have appeared in the ocean, which, having caught a quantum of light, move for some time, attach opposite molecules or lose pieces of their own chain. Then they stop and wait for the next quantum of light. This is how some pansperms get complicated.

Then reproduction appears, when the pansperms fall into two parts and each part again begins to attach atoms and molecules and grow.

The essence of the reproduction process at the precellular stage consists in moving along the chain of surrounding molecules and attaching the necessary molecules from the external environment in the right place to the chain, from the side. And when the complete set is typed in the attached chain, then this chain is

stratified into two. And each continues her life. This duplication process was later preserved in cells and in multicellular organisms. This is the basis for reproduction. And this is the basis of all molecular processes in cells.

Then some pansperms begin to attach, absorb others, and this is already the birth of predatory individuals. They are born immediately with the emergence of life. This is how the stratification of all moving chains into "photon-poisonous" and "predatory" ones occurs. And at this moment, with the advent of predatory pansperms, Her Majesty Evolution is born. Darwin selection begins. Only the best survive and they continue.

The chains begin to evolve, order, become more complex, and structure. Then they begin to build protective shells for themselves and cells are obtained. Cells with molecular tails for locomotion. Sperm analogs. Then multicellular organisms appear. Then worms appear. All this is in the water. Then the fish. Then, after 3 billion years, evolution leads to terrestrial animals and after another 0.5 billion years to apes and mind.

What is the meaning of the existence of wild nature and wild animal world? All living organisms are not born by themselves. They are born by their parents. The rest of the point is to survive. The meaning of life is only to survive. There is no other meaning in life. Survive and fulfill your genetic program, which is inherent in you and selected by millions of trial and error, that is, to give offspring.

What is Mind?

What is Mind? This is a relatively large temporary memory of events. So, for example, aquarium fish remember only the last 3 seconds. Land animals remember events for several hours. Monkeys remember events for several days, and individual skills for the rest of their lives. A person remembers certain skills and events for years, almost all his life. Under hypnosis, old people recall the events of their childhood. Why is there such a difference in memory? It is explained by natural necessity, by the intricate

evolutionary path of man. They ran for millions of years on the ground, then climbed trees and lived in trees for millions of years, then descended to the ground, stood on their hind legs, and for another millions of years they ran on two legs and threw stones at their hunting objects. A large human memory is explained by the large amount of memory substance in the blood of the body and the large capabilities of the brain for the accumulation of this substance. There should not be too much memory substance, otherwise uncontrollable layers of events will begin, everything in the brain will mix up, and the body will go crazy. But in man, all this has been evolutionarily settled, harmonized and improved. There is an assumption that cholesterol accumulating in blood vessels is the memory substance or its chemical precursor.

Also, a person's great memory is explained by the extraordinary complexity of the connections of synapses in his brain. This allows, taking into account all the organs of perception of the world (sight, hearing, smell, touch) for each event to create a unique picture of the layers of the memory substance. And this picture is preserved and can subsequently be reproduced. The processes of teaching students and schoolchildren should not be limited only to memorizing fragments of books. There should be a variety of experiments, films, hikes, excursions related to the subject being studied. Only then will there be solid knowledge that will not be erased throughout life.

For about 60 million years, monkeys evolved in trees before they reached such a level, such a brain volume, that they were able to descend to earth and survive on earth. To do this, I had to stand on my hind legs and learn to throw stones at enemies with my front paws and beat them with a stick. This direction of evolution turned out to be successful and allowed the monkey to become a primitive man. This happened back in Africa.

Then, for another 10 million years, primitive man improved in his body and brain, until he reached almost the present structure of the body and brain. A grown brain, memory, skillful hands made it possible to master fire. They were allowed to use clothes,

weapons (bow, spear, stone), engage in agriculture, and tame animals. Already only the listed phenomena take a person out of the bounds of natural nature. These phenomena have made it possible to dramatically accelerate human reproduction.

Civilization is the era of mankind's madness.

All these qualities were logical and useful for primitive man to survive in sparsely populated areas and within the same community. Primitive man still fit in well with the living wild world around him.

But when there were too many people on the globe, more than a billion, when communities began to often contact each other, they began to fight and mix, then unpredictable processes began in humanity. Evolution from laminar has turned into turbulent, not obeying any rational laws. When civilization began, the actual biological evolution of man stopped and lost its meaning. The uncontrollable interference of those human streams that were born in different places of the globe, in different eras, during the period of low population began. Civilization marked a leap forward in human evolution in comparison with wild animal nature. And the first signs of man's return to the wild state appeared. Genocides appeared, the destruction by less developed peoples of more developed ones. Degradation of the human body appeared, the accumulation of genetic defects.

When there were too many peoples and tribes, natural natural instincts and programs in man began to be realized in a completely perverted form. There were wars, slaves, captives, captives, the unification of tribes into peoples, states, empires. The caste divisions of society began. Religion appeared. Various religions have emerged. Medicine appeared. Drugs appeared. Mass madness began. What the wild doesn't know. Although sometimes it happens there.

There is no special sense in the existence of a "reasonable man". This Hollywood still offers us stories with aliens, against which we need to fight and mentally evolve further. Science fiction

writers are looking for the meaning of further human evolution. But within humanity itself, further evolution has lost its meaning.

Today, there is an interference of human flows created in ancient times, in which each person is forced to rush, adapt, guess, take sides in order to survive. If, in balance with the wild, family, children, love, loyalty made sense, then during civilization these concepts lost all meaning. People are not motivated to live in pairs for long and have children. There are too many people.

Incomparably many, for example, compared with elephants or monkeys or bulls and antelopes. Not much for nature. Civilization pollutes, poisons and destroys nature. Burns oil, gas, coal into the atmosphere. Accumulates hazardous nuclear waste. In the ocean, there are already huge floating islands made of discarded plastic bottles and bags.

Against the background of the growth of the population of mankind, the processes of destruction of the surplus of the population begin. Wars, epidemics, famine. And here again there are no patterns. No laws. Everything happens randomly, turbulently, like foam at the place where a waterfall falls. The foam grows, grows, and suddenly collapses and washes away.

Human senses are not adequate to reality. Sometimes people beat each other to death in completely harmless situations. Likewise, self-esteem. He is most often congenital, sometimes called ambition or show-off, and each person is anxious to find his place in life, corresponding to his self-esteem, ambitions and show-off. As a result, mediocrity but with ambition turn out to be higher than talented people, but without ambition. And this is very harmful to society.

However, despite the complete turbulence of human macro-processes, humanity does not lose hope of a happy outcome. To a happy search for the meaning of their existence. And therefore he studies, studies his history. Draws conclusions. Looking for patterns. Sometimes he even shouts “found”, “found”. But time passes and finds such as Marx's doctrine of communism or the doctrine of democracy are still exposed as useless and

meaningless. The most stable system turns out to be when the real power is completely hidden from the people, but at the same time has effective levers of influence on the people. Today this is only achieved through mass deception.

How peoples genetically move away from each other.

With the separation of different races, nations, in the era of a small total number of people and the absence of contacts, the genetics of peoples evolves in different ways, due to random reasons, random mutations. And here one unpleasant moment arises. Since the figures that each chromosome builds can also change, pieces of one chromosome can jump to another chromosome. This is called crossing, it has been proven long ago. In relation to the phenotype, this may manifest itself in the fact that some muscle fragment or skeleton fragment will be built by another chromosome. And many such mini-crossings can accumulate during the individual evolution of peoples. These crossings can also accumulate in the brain structure. Within the same people, such crossings are tested by time, generations, for usefulness, for vitality. They can gain a foothold in the offspring, or they can be rejected. These are fate and tragedy. But these are isolated cases. And now let's imagine that two peoples, evolving separately for 40 thousand years, these are 2000 generations who have accumulated their crossings, will suddenly create a certain tribe of hybrids with each other. What's going to happen?

Why are there so many freaks in Russia?

We don't know our history. We do not know the true and historical role of the church in the life of the people. We do not know our genetics and biology. They hide a lot from us. And we, as obedient animals, endure everything and go to die for the father-king.

I studied in a rural school, Central European region, during the 60-70s. The school is small, classes were only A and B, and

sometimes without a letter. There are 15-20 people in each class. This school was middle, not primary, from grades 1 to 4, everyone studied in their villages. That is, the maximum number of students in the school was 200-240 people. Perhaps even less. When they lined up for the line on September 1, there were about a hundred - one hundred and fifty people.

Studied at school: dwarfs (from the same family, 4 people); two girls "kosheyki", whose head is tilted to the side from birth, is very ugly; one guy with a hanging leg (congenital dislocation of the hip), on crutches; in the villages they were still with such hanging legs (there are a lot of them in Russia); one guy had a flat chest; squint, flat feet were encountered. Epilepsy. There were other deviations as well. Probably forgot to mention something. Probably they were hiding something. For example, underdeveloped genitals, underdeveloped limbs and uterus. Probably there were deviations in the brains and in the internal organs. But where does all this come from?

About the dwarfs. There lived a grandmother in the village, grandmother had several sons, healthy guys, and suddenly one dwarf, although with a face like brothers. This dwarf married a healthy woman, regretted, they gave birth to four children. Bad luck, all dwarfs. All subsequently had a tragic fate. Although it seems that now one of their descendants lives in the village, also a dwarf.

About the hanging leg. Such people are found everywhere in Russia. I had a classmate, a normal girl, a normal family. And suddenly bam, and her daughter has a hanging leg. Worse than that. Their distant relative also had a drooping leg. Perhaps there are defects that do not appear in all generations.

About the kososnecks. I know that one had an operation, but it was never completely corrected, it is a deep deformation of the entire shoulder region.

All of these defects, I later repeatedly met in all the places where I had to be. Met the most beautiful cross-eyed women. Beautiful women with a defect in the nose. Here, another

phenomenon is possibly manifested, when the most beautiful appearance is achieved by a complex and very subtle molecular genetic configuration, which is not always reliably reproducible. However, according to the cumulative attractiveness of beauty, it has the ability to survive and procreate.

Figure 05.

I am not touching on the subject of cerebral deformities. Russia is especially rich in this. And most likely the causes of brain deformities are the same. And they all get involved in politics (!).

Hypothesis. Yes, we have had the yoke of the Tatar-Mongols = Great Russians for 300 years. And before that there was the yoke of the Rurikovich, which is presented to us as a blessing. Then we lived under the serfdom for another 300 years. At this time, perhaps, our villages served the occupiers and masters to correct their own hereditary defects. The ugly invaders puffed up the village girls, and if a normal one was born, then they recognized or somehow welcomed, and if a freak, then let him survive as he wants. I read stories about how they put a bucket of water in the vestibule during childbirth. And if a defective was born, then he was immediately taken out and drowned in a bucket. And then they brought it back and recorded it as stillborn. Perhaps the church has done the same. When a married couple did not have children, the wife went to church, and the genetically defective

priest produced freaks. Or maybe vice versa, when a genetically full-fledged father gave his seed to parishioners and corrected genetics. Maybe we don't understand something and everything was different? Correct us.

Here are some areas of the brain that did not converge. A trifle. But when, in the process of vital activity, the brain "cursor" runs into this area, it cannot get out back. Beats start in the brain. Convulsions of the whole body begin. Epilepsy. And the beats do not stop until they completely lose consciousness, until a reboot occurs. Another example. Down Syndrome. Everything seemed to be in order: during meiosis, all pairs of chromosomes spread apart. But here's the trouble: with mixed marriages of partners very distant in time, some chromosomes fall out of the separation mechanism, stick to a neighbor and create an extra chromosome in the sperm. Down is born. Sometimes it is not too noticeable and there are hidden downs. In which only in 2-3 generations a net down pops up in the offspring. For example, Yeltsin or Khakamada or Bledans or Sylvester Stallone. Look how active, cool, desperate they are and are not afraid of anything. An, this is simply the inability of downs to assess the dangers and the results of their activities. By the way, it is they who are the result of the mixing of very distant peoples. European with Mongoloid. Hollywood films on this subject are deceitful. How does the Frenchman Jean Reno go there to his daughter in Japan and all such full-fledged and heroic. I remember, back in my student days, there was a bike that morons are born from marriages of Slavs with Asians.

And how many physical deformities. And the squint comes from there. And congenital dislocation of the hip. After all, I am sure that every Russian has a leg familiar with congenital deformity. Now they are undergoing surgery, but this is only partially corrected. And the slanting necks? It's terrible, innately tilted to one side. They are also treated surgically. What are you all about the sad? This is normal! Yes, normal. And explosions in forests and fields are normal. Exploding mushrooms just grow.

And what about cancer? Cancer is also normal. Few chromosomes do not join, and this unmatched part of the chromosome one day begins to build its own organ, independent of the body. And here it is, a lump is growing. And the devil himself is not her brother. Can't stop it.

In short: whether we like it or not, the spread of humanity into species is inevitable. And it is not possible to collect already spread species back into one species. Man is not made of plasticine. Choose, either a penis in half, or a sensation in bounce. Or one nation, for example R1b, will destroy all the others. Or we will take a break from the growing stream of deformities and accompanying medicine.

People, think about it! We say scary things. Terrible things. But nature is all based on constant terror and death. In nature, there is no coffee in bed. In nature, there is only a snake in bed. Or a lion for breakfast.

Today humanity has one meaning of existence. Live longer. After all, it was possible back in 1963 to shy away and destroy all of humanity. But the authorities took pity on the peoples.

Common causes of deformities.

A chromosome is a working intracellular organ, along which various substances are constantly pumped, from which the chromosome selects the necessary ones and builds some object.

Each chromosome builds some complex ramified figure, and when all 23 figures are added and spliced, a person is obtained. These figures can be quite complex, with unexpected outgrowths into the most unexpected organs. This makes it clear why a defect in one chromosome is reflected in many places and processes in the body.

Between the Yakuts and the Slavs, 40,000 years of evolution. And if we take into account according to the Klyosov method "there and back", when two peoples evolve independently, then the distance between them is 80,000 years. The European part of Russia is clogged with monsters from the collapse of the Finno-

Ugric = Yakut-Slavic hybrid genetics. We live and do not understand where it comes from. And this is a mixture of chromosomes differing in size and structure. We are already almost different species. And one species simply doesn't exist for the other. The situation is complicated by the fact that, as a rule, the first generation of hybrids has high performance, it pleases the parents. However, from generation to generation, hybrid peoples degenerate, hybrid genetics disintegrate. But no scientist can trace the degradation of hybrid peoples, it takes thousands of years. However, there is a certain accompanying law: empires are built, prosper for a while, and then fade and fall apart. This is an external manifestation of the degradation and degeneration of the hybrid people.

Imagine that we are walking through forests and fields and from time to time someone explodes. And we are used to it, yes, this is normal. It does not happen often, everything is within the normal range, within the margin of error. We do not understand that everything around was mined a long time ago. We compare: yes, in the United States, too, there are a lot of freaks, and Ukraine is full of freaks, this is the norm for the whole world. And this is the result of mixing of peoples remote in evolution. The chromosomes have drifted off a bit in their molecular characteristics. And during the construction of organisms, "inconsistencies" arise.

However, there are small peoples in which genetics have stabilized and these peoples become pure and strive to leave the empire. Like the peoples of the Caucasus. Or Finland.

Our hypotheses about the causes of specific deformities.

Our hypothesis about the cause of a large number of deformities. If different peoples live without mixing with other peoples for 20-30 thousand years, then their chromosomes still "float" or "flow" or "mutate" a little. That is, without a special external manifestation, these peoples experience molecular changes both in the chromosomes themselves and in those body

fragments that each chromosome builds. Which outwardly do not manifest themselves in any way inside the people. The people are healthy and live successfully, multiply and overcome difficulties. However, when two evolutionarily distant peoples mix, a distant process of chromosome mismatch begins. This does not appear in the first generation. The first generation are heroes, like Khrushchev's corn purchased in the USA. They contain two different, but both complete sets from different nations. All troubles begin in distant generations, when hybrids already marry each other.

Such evolutionarily distant peoples in America, for example, are Europeans and American aborigines. Although not the most distant. There are many evolutionarily distant settlements, the most ancient haplogroups B, C, D, E, F are far removed from modern haplogroups R1a or R1b. But in Europe, all haplogroups have long been either mixed up, or territorially divided into small states.

A unique situation has been created in Russia. Such peoples in Russia turned out to be the Yakuts (Chinese) from the north (haplogroups N, O) and the Slavs in the middle and from the south (haplogroup R1a). Significant mixing has occurred in the last millennium. The invasion of the Huns, then the northern Finno-Ugric (Ruriks), then Genghis Khan, then the Tatar-Mongols, then the civil war of 1918-1920. The difference between the separation of haplogroups N and R1a is approximately 40,000 years. That's a lot! The chromosomes "floated away", each in its own direction. It is not clear why Klyosov, an authoritative scientist with a worldwide reputation, declares the Chukhonsky and Finno-Ugric peoples on the territory of Russia Slavs. Just because they learned to speak the Slavic language? Or his personal kindness? Apparently, the reason is the unwillingness to delve into a dangerous issue and engage in political speculation. Perhaps the reluctance to subject their science to a ban on the part of the Finno-Ugric authorities, which have been in Russia since 1917, after the overthrow of the Romanovs.

Here are the simplest explanations for some of the common anomalies.

1) Epilepsy. As a result of the mismatch of chromosomes from the mother and father, a piece of the brain is not connected to other parts of the brain as expected. And when, in the process of life, the "cursor" of the brain runs into this area, beats, convulsions begin, the cursor cannot break out of the dead end. There are no necessary connections. The person lies and twitches until he loses consciousness and the brain reboots. By the way, it is possible that all the usual seizures arise from this. Small chromosome mismatches, which do not appear in ordinary life, suddenly give a spasm when strained or cooled.

2) Congenital dislocation of the hip, curvature of the neck and other physical abnormalities. As a result of the mismatch of chromosomes that build the pelvic bones, legs, shoulder girdle, the process goes wrong.

3) In all likelihood, the downs are the same reason. A mismatch in chromosomes, abnormalities in the process of division of germ cells, and an extra chromosome appears in the egg or sperm. Moreover, one should not think that down appears only when an extra chromosome has already appeared. This chromosome, inclined to be "extra", does not work fully in a normal organism and creates not quite adequate people. This is easily observed in all parents who later had down children.

4) Cancer. Another chromosome mismatch. A small section of the chromosome is not connected where necessary in the construction of tissue. It did not work, and like a mine waiting to be turned on. In the meantime, all organs are built without him. The organism lives. But once, with an external molecular or chemical action, this unrealized piece of chromosome is included in the construction of tissue. Which was already built earlier. Duplication of an organ that already exists begins. Moreover, it is an inadequate duplication, because the situation is not the right one, and the time is not right, and, as a rule, several chromosomes must participate in the construction of an organ, and in general

this organ is not needed. A shapeless tumor grows. In theory, this tumor should be the size of the organ it is building. Sometimes this organ is small in size and is declared "not a malignant tumor." However, sometimes this organ is so large that it can suffocate the entire body.

5) Schizophrenia. The same thing, a mismatch of brain regions due to a mismatch of chromosomes. Connections between parts of the brain are broken. Some parts of the brain work in parallel and independently. As a result, multiple personality disorder and other disorders.

6) This also includes strabismus, stuttering, psoriasis and other birth defects. Let us note the duration of the clinging of an alien chromosome without any special manifestations. I saw a man who had a small psoriasis on his arm, while the gallbladder was operated on (apparently also connected), and with It's like psoriasis, but it's red just like a baboon's. Well, this is how many thousands of generations have passed when our ancestors ran through the trees with baboons ... And this baboon genetics is now interpreted as psoriasis.

7) Now doctors are watching how all diseases are getting younger. This is not surprising, because more and more mixed marriages between evolutionarily distant haplogroups. Potential defects, chromosome mismatches, are spreading throughout humanity. And the inconsistencies of chromosomes do not disappear anywhere, they do not diminish. Because there is no natural selection.

And further, it can be expected that the growing wave of mixed marriages will entail a huge wave of deformities in the brain and body. Which will cause depression in society. Humanity will understand that it has no prospects. Which will lead to negative birth rates, panic, wars, insanity, drastic measures, and subsequent extinction.

It is necessary to study African or other herds of animals of the same species. Is there a confusion between them? How do the different herds behave when they meet? Do they mix easily, or is

there a war between leaders and herds? This is a very important question.

And the last thing. In Africa, on other continents, huge mixed herds of herbivores are observed. Bulls, zebras, giraffes, antelopes, elephants, rhinos graze together, gain weight. But mixed individuals are never observed, from mating between zebras and antelopes, between bulls and rhinos, between elephants and giraffes. Nature rejects this path. Nature creates barriers against such mating. Animals identify themselves as a specific species by smell, appearance, sounds and gestures. Courtship movements. Even artificially created hybrids between evolutionarily close horse and donkey, or mouse and rat, do not continue. And other artificial mating does not continue. And people do not hesitate to enter into mixed marriages. Directing your own offspring to a dead end.

It is very likely that the monasteries were just created for the habitation of freaks. With deformities, obvious or hidden from outsiders. These were God's people.

Considering the numerous monasteries, the drowning of freaks during childbirth, the natural non-participation of freaks in reproduction, one can imagine how many freaks have gone “out of circulation” in Russia over the last thousand years. This number is more than all normal people living today.

How chromosomes build organs and body parts.

This area of biology is in a very embryonic state due to the lack of understanding by the scientific community of the very phenomenon of life. The authors succeeded in making progress in this understanding. And in parallel, and in understanding the functional role of chromosomes. It is presented in a separate book dedicated to biological life.

As noted above, the basis for the reproduction and growth of an organism is the construction of parallel chains. Fluids saturated with building material are pumped along the chromosome. And from these liquids, material is snatched and attached to build a

new chain. Human chromosomes are different and they build different objects. But almost every such openwork object has the shape of a translucent person. As if made of fog. And only when put together 23 such translucent people form a dense, real, muscular person.

The simplest and most suggestive hypothesis is the assumption that each pair of chromosomes (a person has 23 pairs of chromosomes) builds some kind of organ. Indeed, simple, beautiful, understandable, but does not stand up to the test. Because with many (if not all) occurring defects of one or another chromosome, the defect in the phenotype of the organism has multiple manifestations. If, for example, a baby was born with a defect in the eyes, then along the way, from somewhere else, a lot of defects in the internal organs, in the proportions of the body, in the functioning of the organs are taken. And this is almost always the case. This rejects the hypothesis that each chromosome builds only its own organ.

Then hypothesis 2 arises. Each chromosome builds some complex, openwork, branched figure, some very complex "puzzle", and when all 23 figures are added and spliced together, a person is obtained. These figures can be quite complex, with unexpected outgrowths into the most unexpected organs. And this hypothesis seems to be the most plausible. This makes it clear why a defect in one chromosome is reflected in many places and processes in the body. The question arises, is it possible that one chromosome builds two unconnected figures? It seems that this is also possible, but this is rare, and we will not go deeper in this direction.

This version is confirmed by the disease cancer. It is along these openwork structures that cancer metastases spread.

Another confirmation is the emergence of Siamese twins. These, independently growing, but once touched by the twins' openwork structures, suddenly catch on and begin to grow inward and through each other. Giving birth to Siamese twins. Pregnancy with twins or more must be strictly controlled.

Chromosomes and defects.

This chapter illustrates our thesis that each chromosome is involved in the construction of several organs and tissues of the body. At the same time, some openwork spatial structures are created, which are mutually intertwined and mutually germinate. And when they stick together, a single body, a single organism is formed.

For clarity, the word "**microcephaly**" and other "cephalys" are highlighted in red (bold). With defects in quite a few chromosomes, microcephaly is created. This confirms our hypothesis that many chromosomes build their own complex, openwork object necessarily with a process in the brain. And a defect in this process leads to a defect in the entire brain, disrupting the process of its construction.

However, there are chromosomes, the defect in which does not lead to microcephaly. This does not mean that an outgrowth from their building object into the brain is not created. But it is possible that this process is either not significant, or this process is in greater contact with the spinal cord. Spinal cord defects are not covered here.

Chromosome 1

Number of genes - 3000

Today there are 890 known genetic diseases associated with chromosome 1.

Below is a list of some of the diseases associated with genes on chromosome 1:

- Alzheimer's disease (PS2)
- Gaucher disease (GBA);
- Maple syrup urine disease;
- Galactosemia;
- Hemochromatosis;
- Glaucoma (GLC1A);

- Homocystinuria;
- Deficiency of 3-hydroxy-3-methylglutaryl-CoA lyase;
- Deficiency of medium-chain acyl coenzyme A dehydrogenase;
- **Microcephaly**;
- Late cutaneous porphyria (UROD gene);
- Prostate cancer (HPC1);
- Ehlers-Danlos syndrome;

Chromosome 2

Number of genes - 2500

A list of some diseases associated with chromosome 2 genes:

- amyotrophic lateral sclerosis;
- hemochromatosis;
- deficiency of long-chain acyl coenzyme A dehydrogenase;
- colon cancer (MSH2, MSH6);
- Vaandenburg syndrome (PAX3);
- Ehlers-Danlos syndrome;
- essential tremor (ETM2);

Chromosome 3

Number of genes - about 1900

A list of some diseases associated with the genes of chromosome 3:

- alcaptonuria;
- von Hippel-Lindau disease (VHL);
- deficiency of 3-methylcrotonyl-CoA carboxylase;
- biotinidase deficiency;
- propionic aciduria;
- lung cancer (SCLC1);
- colon cancer (MLH1);
- Brugada syndrome;
- essential tremor (ETM1);

Chromosome 4

The number of genes is about 1600

A list of some diseases associated with genes of chromosome 4:

- achondroplasia (FGFR3);
- Parkinson's disease (SNCA);
- Huntington's disease (HD);
- hemophilia C;
- methylmalonic acidemia;
- narcolepsy (NRCLP);
- polycystic kidney disease;
- progressive ossifying fibrodysplasia (FOP);
- Alice van Cleve syndrome (EVC);

Chromosome 5

Number of genes - about 1700

A list of some diseases associated with the genes of chromosome 5:

- 5-alpha reductase (SRD5A1);
- asthma;
- Sandhoff's disease;
- homocystinuria;
- deficiency of 3-methylcrotonyl-coenzyme A carboxylase;
- diastrophic dysplasia (DTD);
- Cockayne syndrome (SKN1);
- cat cry syndrome;
- Ehlers-Danlos syndrome;
- spinal muscular atrophy (SMN1);

Syndrome of "cat cry" (monosomy 5p). Described in 1963. Diagnostic signs of the disease are: **microcephaly**, unusual screaming or crying, reminiscent of a cat's meow (especially in the first weeks after birth); antimongoloid eye incision, squint, moon-shaped face, hypertelorism, wide bridge of the nose. The auricles are set low and deformed. There is a transverse palmar fold, clinodactyly, syndactyly. Mental retardation at the stage of

imbecility. Cryptorchidism and kidney abnormalities are rare. It should be noted that signs such as a moon-shaped face and a cat's cry are smoothed out with age, and microcephaly and strabismus are more clearly detected. Life expectancy depends on the severity of congenital malformations of internal organs. Most patients die in the first years of life.

Chromosome 6

Number of genes - about 1900

A list of some diseases associated with the genes of chromosome 6:

- maple syrup urine disease;
- congenital adrenal dysplasia due to deficiency of 21 hydroxylase (CYP21A)
- hemochromatosis (HFE);
- diabetes (IDDM1);
- epilepsy (EPM2A);
- methylmalonic acidemia;
- polycystic kidney disease;
- Ehlers-Danlos syndrome;
- spinocerebellar ataxia (SCA1);

Chromosome 7

Number of genes - about 1800

A list of some diseases associated with the genes of chromosome 7:

- argininosuccinate aciduria;
- maple syrup urine disease;
- hemochromatosis;
- diabetes (GCK);
- cystic fibrosis (CFTR);
- obesity (OB);
- Williams syndrome (ELN);
- Pendrin's syndrome (Pendrin);
- Ehlers-Danlos syndrome;

- citrulinemia;

Louis-Bar syndrome (ataxia-telangiectasia). Disease with an autosomal recessive mode of inheritance. Described in 1941. The population frequency is 1 in 30,000. The main diagnostic features are: cerebellar ataxia, telangiectasia on the conjunctiva, open areas of the body and the mucous membrane of the hard and soft palate, nystagmus, immunodeficiency, a tendency to malignant neoplasms. Patients often die from lung infections. Cytogenetically, the majority of patients show an increased level of spontaneous chromosomal aberrations, as well as an increased frequency of translocations with the predominant involvement of chromosomes 7 and 14.

Fanconi's anemia. Disease with an autosomal recessive mode of inheritance. Described in 1927. The main diagnostic features: pancytopenia, hypoplasia of the radius and thumb, delayed growth and development, skin hyperpigmentation in the groin and axillary regions. In addition, bone marrow hypoplasia, a tendency to leukemia, hypoplasia of the external genital organs, cryptorchidism are noted. It is cytogenetically characterized by multiple chromosomal aberrations - chromosome breaks and chromatid exchanges. It is a genetically heterogeneous disease, i.e. a clinically similar phenotype is due to mutations in different genes.

Nijmegen's syndrome (Nijmegen Breakage Syndrome - NBS). An autosomal recessive disease characterized by growth retardation, **microcephaly**, characteristic face, immunodeficiency, coffee-with-milk spots on the skin, gonadal dysgenesis, severe mental retardation and a predisposition to cancer.

Ectrodactyly. It is a congenital malformation characterized by a lack of fingers or toes, making the palms and feet look more like pincers. As a rule, in people with ectrodactyly, hearing is impaired - deafness, like deformation of the limbs, is caused by a malfunction of the seventh chromosome.

Chromosome 8

The number of genes - more than 1400

A list of some diseases associated with the genes of chromosome 8:

- Burkitt's lymphoma (MYC)
- Werner's syndrome (WRN);

Chromosome 8 trisomy syndrome. First described in 1962. The main diagnostic signs of this syndrome are: **macrocephaly**, micrognathia, an everted lower lip, a massive protruding forehead, a wide nasal bridge, a high arched palate, large protruding ears with a protruding antihelix. In addition, there are skeletal anomalies, expressed in accessory ribs and vertebrae, closed spinal hernias in the cervical and thoracic spine, aplasia and hypoplasia of the patella, and a short neck. There are multiple joint contractures, clinodactyly, camptodactyly. Malformations of the urinary system, especially hydronephrosis, are common. They diagnose heart defects, especially defects of the septa and large vessels. The intellect of the patients is reduced, there is a delay in psychomotor and speech development. The prognosis of physical, mental development and life is unfavorable, although patients were noted at the age of 17 years.

Langer-Gidion syndrome (tricho-rhinophalangeal syndrome). The main clinical signs of the disease are: thin and sparse hair, bulbous nose, conical epiphyses of the phalanges of the fingers, multiple cartilaginous exostoses. In addition to these signs, patients have a number of micro-anomalies: wide sparse eyebrows, deep-set eyes, macrostomy, violation of eruption and position of teeth, micrognathia, large and low auricles. Multiple cartilaginous exostoses appear up to 4 years of age and are located wherever there is cartilage, and their growth increases during periods of active growth of the body and stops at the age of 18-20 years. Newborns have excess skin. Mental retardation of varying degrees, delayed speech development are noted.

Diseases with instability of the number of chromosomes.

Rothmund-Thomson syndrome. It is characterized by congenital poikiloderma (telangiectasia and hyperpigmentation of the skin of different shades), juvenile cataract, congenital bone defects, soft tissue contractures, hair growth abnormalities, hypogonadism, hypodontia, anemia and osteogenic sarcomas. In such patients, somatic mosaicism is often observed in the trisomy of chromosome 8 in a small percentage of cells.

Chromosome 9

The number of genes - more than 1400

A list of some diseases associated with genes on chromosome 9:

- Friedreich's ataxia (FRDA);
- Tangier's disease (ABCI);
- galactosemia;
- malignant melanoma (CDKN2);
- family dysautonomy
- Ehlers-Danlos syndrome;
- tuberous sclerosis (TSC1);
- chronic myeloid leukemia (ABL)
- citrulinemia

Chromosome 9 trisomy syndrome. Described in 1970. The etiology is based on nondisjunction of chromosomes in the early stages of blastula, except for rare cases of de novo mutations in gametogenesis. The main diagnostic signs of trisomy 9 syndrome are: **microcephaly (dolichocephaly)**, deep-set eyes, high forehead, wide bridge of the nose, bulbous nose, high palate, often with a cleft, microretrognathia. The auricles are deformed and set low, with a short neck with a low hairline. There are abnormalities in the development of the musculoskeletal system, including dysplasia of the hip joint, dislocation of the elbow or knee joints, and rib anomalies. Boys have cryptorchidism and micropenis. From the pathology of internal organs, mainly, the pathology of the cardiovascular system, kidneys, complex diseases of the gastrointestinal tract was noted. Life prognosis is unfavorable.

Most patients die in the first 4 months of life, especially from respiratory infections.

Duplication syndrome of the short arm of chromosome 9. Described in 1970. This is the most common form of partial trisomy in humans. Diagnostic signs of the disease are: **microbrachycephaly**, antimongoloid eye incision, hypertelorism, anophthalmos, a wide and rounded tip of the nose, protruding upper lip and upper jaw. The auricles are set low with abnormal antihelix and antigus, narrow auditory canal. In addition, there is a short neck with a low hairline, a transverse palmar fold, and a delay in bone age is noted radiographically. In patients, kidney pathology is found. Oligophrenia. Life prognosis is favorable, patients survive to old age 25%

Alfie's Syndrome. First described in 1973. Diagnostic signs of the disease are: trigonocephaly, a sharply protruding forehead, a Mongoloid eye shape, epicanthus, exophthalmos, hypertelorism, a flattened and wide bridge of the nose, a small mouth with a large upper lip, high palate. Auricles without a lobe or it is underdeveloped, with a smoothed curl. The neck is short, nipple hypertelorism is noted. The fingers and toes are long, with additional flexion folds; nails are wide, convex, square in shape. In girls, hypoplasia of the labia minora and large labia is expressed, in boys - hypoplasia of the scrotum and penis. Among the defects of the internal organs, damage to the cardiovascular system and hydronephrosis of the kidneys were noted. Mental retardation in the stage of imbecility, less often - retardation. By nature, the patients are affectionate, calm, obedient. Life prognosis is favorable.

Chromosome 10

The number of genes - more than 1400

Today, there are many known genetic diseases associated with chromosome 10. A list of some diseases associated with genes of chromosome 10:

- Gyrate atrophy (OAT);

- Refsum disease (PAHX);

Chromosome 11

Number of genes - about 2000

Today, there are many known genetic diseases associated with chromosome 11. A list of some diseases associated with genes of chromosome 11:

- ataxia telangiectasia (ATM);
- beta thalassemia;
- Best's disease (VMD2);
- Niemann-Pick disease;
- deficiency of beta-ketothiolase;
- diabetes (IDDM2);
- multiple endocrine neoplasia (MEN1);
- oncogene HRAS (HRAS);
- familial Mediterranean fever;
- sickle cell anemia;
- long interval syndrome (LQT);

Wiedemann-Beckwith syndrome. The main diagnostic signs of the disease are: macroglossia, macrosomia with an increase in muscle mass and subcutaneous fat layer, protruding occiput and malocclusion associated with hypoplasia of the upper jaw and relative hyperplasia of the upper. The characteristic feature is the presence of vertical grooves on the earlobes. The pathology of the development of internal organs is described: defects of the interventricular septa, accessory spleen, cytomegaly of the adrenal cortex, incomplete bowel rotation. Bone age is ahead of the passport age.

Mental development corresponds to age, moderate mental retardation is possible. Also heavy weight, umbilical hernia, enlarged tongue, etc.

Williams syndrome (elf face). Described in 1961. The main diagnostic signs of the syndrome are: an unusual face, epicanthus, swelling of the eyelids, a short nose with open forward nostrils,

full cheeks, microgenia. Internal organ pathology includes supravalvular aortic stenosis, heart septal defects, pulmonary artery stenosis. Mental retardation of varying degrees, various mental disorders, low intelligence. With age, the disease worsens.

Chromosome 12

Number of genes - more than 1600

A list of some diseases associated with genes on chromosome 12:

- von Willebrand disease;
- methylmalonic acidemia;
- Zelweger's syndrome (PXR1);
- tyrosinemia;
- phenylketonuria (PAH);

Chromosome 13

The number of genes is about 800

A list of some diseases associated with the genes of chromosome 13:

- autosomal recessive sensorineural deafness (CX26);
- Wilson's disease (ATP7B)
- propionic acidemia;
- breast cancer (BRCA2);
- retinoblastoma (RB1);
- Patau syndrome;

Patau syndrome (trisomy 13). First described in 1960. The following diagnostic signs are characteristic: **microcephaly**, cleft of the upper lip and palate, low-set deformed auricles, microgenia, polydactyly, flexor position of the fingers, convex nails, transverse palmar fold, rocking foot. Among the defects of internal organs, congenital heart defects (defects of the septa and large vessels), incomplete bowel rotation, Meckel's diverticulum, polycystic kidney disease, and doubling of the ureter were noted. Cryptorchidism, hypoplasia of the external genital organs, doubling of the uterus and vagina are observed. Deep idiocy.

Children generally die before the age of 1 year, more often in the first 2-3 months of life.

Syndrome. Described in 1962. The main diagnostic signs of the disease are: **microcephaly** with signs of craniostenosis; asymmetry of the face; wide, protruding bridge of the nose; hypertelorism, epicanthic; small chin. There is ocular pathology, including microphthalmia, cataract and strabismus. Skeletal anomalies are represented by hypoplasia of 1 finger and 1 metacarpal bone, clinodactyly. Internal malformations include CHD, bowel rotation disorder, hypoplasia and polycystic kidney disease. There is atresia of the anus. Boys have cryptorchidism, hypospadias. Patients are distinguished by a sharp lag in physical and mental development. Mental retardation in the stage of imbecility or idiocy. Children with gross defects die before a year, although patients over the age of 40 are noted.

Retinoblastoma. Patients with retinoblastoma, a malignant tumor of the retina, account for 0.6-0.8% of all patients with cancer. This is the first tumor for which a link to chromosomal abnormality has been established. The disease usually begins at the age of about 1.5 years and the first signs are luminescence of the pupils, a sluggish reaction of the pupil to light, and then a decrease in vision up to blindness. Complications of retinoblastoma are retinal detachment, secondary glaucoma.

Chromosome 14

The number of genes is about 1200

Today, there are many known genetic diseases associated with chromosome 14.

A list of some diseases associated with genes of chromosome 14:

- Alzheimer's disease (PS1 (AD3));
- Krabbe's disease;
- Niemann-Pick disease;
- deficiency of alpha-1-antitrypsin (SERPINA1);

Chromosome 14 trisomy syndrome. Described in 1975.

The main diagnostic signs of the syndrome are: **microcephaly**, facial asymmetry, high and protruding forehead, short and bulbous nose, full lips, high palate, often with clefts, microretrognathia. The auricles are set low, with small lobes. Short neck, narrow and deformed rib cage, cryptorchidism, hypogonadism and small penis. From the defects of internal organs, defects of the cardiovascular system, displacement of the kidney and renal failure, asthma and dermatoses are expressed. Life prognosis is unfavorable, however, patients at the age of 13.5 years were noted.

Trisomy syndrome of the long arm of the 14th chromosome. Described in 1970. Typical signs of the disease are: **microcephaly**, bulbous nose, thin upper lip, microstomy, lowered corners of the mouth, low-set rotated auricles, short neck. Characterized by an incorrect arrangement of the fingers on the hand, clinodactyly, clubfoot. Of the internal defects, the pathology of the cardiovascular system is described. Children lag behind in psychomotor and physical development.

Chromosome 15

The number of genes is about 1200

Today, there are many known genetic diseases associated with chromosome 15.

A list of some diseases associated with genes on chromosome 15:

- Tay-Sachs disease (HEXA);
- isovalerian acidemia;
- Bloom's syndrome;
- Marfan syndrome (FBN1);
- Prader-Willi syndrome (SNRPN);
- Engelmann's (Angelman) syndrome (UBE3A);
- tyrosinemia;

Prader-Willi syndrome. Described in 1956. The main diagnostic signs of the disease: weak fetal movement in the II trimester of pregnancy, muscle hypotonia, mental retardation, dwarfism,

obesity, hypogonadotropic hypogonadism, small distal extremities (acromicria).

Hypopigmentation, strabismus, micrognathia, dolichocephaly, almond-shaped eyes, cryptorchidism and hypoplasia of the penis in boys are also noted.

Engelman's Syndrome (Happy Doll Syndrome). Described in 1965. The main signs of the disease are: unusual and frequent laughter, a specific face with a grimace of a smile, repetitive puppet stereotyped movements, lack of speech. There is severe mental retardation.

Chromosome 16

The number of genes is about 1300

Today, there are many known genetic diseases associated with chromosome 16.

A list of some diseases associated with genes of chromosome 16:

- alpha thalassemia (HBA1, HBA2);
- Crohn's disease
- polycystic kidney disease (PKD1);
- Familial Mediterranean Fever (FMF)

Chromosome 17

Number of genes - more than 1600

Today, there are many known genetic diseases associated with chromosome 17.

A list of some diseases associated with genes on chromosome 17:

- anti-oncogene protein (p53);
- Canavan's disease;
- galactosemia;
- deficiency of long-chain acyl - coenzyme A dehydrogenase;
- breast cancer (BRCA1);
- Charcot-Marie-Tooth syndrome (CMT1A);
- Ehlers-Danlos syndrome;

Miller-Dicker Syndrome. Described in 1963. The most important diagnostic feature is **microcephaly**. The sick have a high forehead, narrowed in the temporal areas, antimongoloid eye incision, fish mouth, hypertelorism, micrognathia, there is a transverse palmar fold and low-set deformed auricles. Described congenital heart defects, renal agenesis, duodenal atresia, inguinal hernia. Autopsy reveals lissencephaly - the absence of grooves and convolutions in the cerebral hemispheres. Underdevelopment of the gray matter of the brain is also revealed. Most patients die in early childhood.

Chromosome 18

Number of genes - more than 1600

A list of some diseases associated with the genes of chromosome 18:

- Niemann-Pick disease (NPC1);
- pancreatic cancer (DPC4);
- Edwards syndrome;

Edwards syndrome (trisomy on chromosome 18). Described in 1960. Babies with Edwards syndrome are low birth weight. The main diagnostic signs of the syndrome are: dolichocephaly, hypertelorism, low-set abnormal ears, micrognathia, microstomy, sloping chin. There are anomalies in the development of the extremities: upper - flexion deformities of the fingers, overlapping fingers, clenched fingers, nail hypoplasia (especially of the V finger); lower - a short and wide toe, a typical foot in the form of a rocking chair, cutaneous syndactyly of the feet. Of the internal defects, it should be noted combined defects of the cardiovascular system, incomplete bowel turn, malformations of the kidneys, often hydronephrosis and a horseshoe kidney), cryptorchidism. There is a delay in psychomotor development, idiocy and imbecility. Children die mainly at the age of 1 year from complications caused by congenital malformations.

Ring chromosome 18 syndrome. Described in 1962. It is cytogenetically represented by circular chromosome 18, mosaic variants are possible. The main clinical signs of the disease: **microcephaly**, hypertelorism, strabismus, ptosis, nystagmus, coloboma of the iris, flattened nasal bridge, carp mouth, thin upper lip, high palate (often with a cleft). Internal organ pathology is rare. Mental retardation is usually severe and manifests itself in 100% of patients.

Syndrome 18q-. Described in 1964. Typical signs of the disease are: **microcephaly**, hypoplasia of the middle part of the face, deep-set eyes, carp mouth, face profile is flat or concave. Characterized by a high palate or its cleft, deformed auricles by atresia or narrowing of the external auditory canals. Eye abnormalities include nystagmus, strabismus, glaucoma, epicanthus, and optic nerve atrophy. Boys have cryptorchidism, hypoplasia of the penis and scrotum, girls have hypoplasia of the labia minora. Of the defects of the internal organs, there are heart defects, less often - of the kidneys. Mental retardation is usually profound and occurs in 100% of cases. Changes in dermatoglyphics are typical: excess curls on the fingers and a transverse palmar fold.

Monosomy syndrome of a short arm of chromosome 18 (syndrome 18p-). Described in 1963. The main diagnostic signs of the syndrome are: muscle hypotension, moderate **microcephaly**, high forehead, hypertelorism, epicanthus, ptosis, wide flattened nose bridge, microgenia, wide mouth with drooping corners of the lips and protrusion of the upper lip in the form of a "police cap", dental anomalies, large deformed ear shells. Short neck, depressed chest, umbilical and inguinal hernias are common. Skeletal anomalies can be represented by dislocation of the hip, deformity of the elbow joint. Of the defects of the internal organs, CHD is found. IgA deficiency is also detected. All patients lag behind in psychomotor development, in many cases there is no phrasal speech up to 7-9 years.

Chromosome 19

Number of genes - more than 1700

A list of some diseases associated with the genes of chromosome 19:

- atherosclerosis (APOE);
- maple syrup urine disease (BCKDHA);
- hemochromatosis;
- glutaric acidemia (type I);
- myotonic dystrophy (DMPK);
- Glanzmann-Riniker syndrome (Jak3);
- Marfan syndrome;

Diseases with instability of the structure of chromosomes

Bloom's Syndrome. Described in 1954. The main diagnostic features are: low birth weight, growth retardation, narrow face with butterfly-shaped erythema, massive nose, tendency to malignant neoplasms. Mental retardation is not observed in all cases.

Chromosome 20

The number of genes - more than 900

A list of some diseases associated with the genes of chromosome 20:

- Alagil's syndrome;
- Glanzmann-Riniker syndrome (ADA);

Chromosome 21

The number of genes is more than 400

A list of some diseases associated with the genes of chromosome 21:

- autoimmune polyglandular syndrome (APS1);
- amyotrophic lateral sclerosis (SOD1);
- deficiency of holocarboxylase synthetase;
- homocystinuria;

The clinical manifestations of homocystinuria are different, but the most typical are the following: mental retardation, lens ectopia, bone deformities, thromboembolism and cardiovascular pathology. These babies look healthy at birth.

The diagnosis is made at the age of 3 years, when a subluxation of the lens is found, but in most cases a bright clinic develops up to 10 years. Parents notice that during a rapid movement of the head, the irises of the child tremble. Then other eye symptoms join: myopia, astigmatism, glaucoma, cataracts, retinal detachment, optic nerve atrophy. Skeletal anomalies in these children are especially common. First of all, there is a disproportion of physique in the form of shortening of the trunk, lengthening of the limbs, moderate osteoporosis of bones, scoliosis, curvature of the lower leg, deformities of the chest, high palate, hollow foot. These children have blue eyes and a specific butterfly-shaped erythema (burning cheekbones) and erythematous spotting of the extremities. Mental retardation often progresses, but in some patients the intellect is not impaired. About 10-15% of patients suffer from seizures.

The next complication of this disease is thromboembolism of vessels of various diameters, in particular of the brain, which can manifest itself at any age.

Down syndrome (trisomy 21). First described in 1866 by the English physician Down. The most common chromosomal syndrome - the population frequency is 1 case per 600-700 newborns. The frequency of birth of children with this syndrome depends on the age of the mother and increases dramatically after 35 years. Cytogenetic variants are very diverse, but about 95% of cases are represented by simple trisomy 21 of chromosomes, as a result of nondisjunction of chromosomes in meiosis in parents. The presence of polymorphic molecular genetic markers makes it possible to determine a specific parent and the stage of meiosis at which nondisjunction occurred (M1 - nondisjunction of homologous

chromosomes 21 and M2 - nondisjunction of chromatids). Despite the intensive study of the syndrome, the causes of chromosome nondisjunction are still not clear. Etiologically important factors are considered to be intra and extrafollicular overripe of the ovum, a decrease in the number or absence of chiasmata in the 1st meiotic division. Mosaic forms of the syndrome were noted (2%), Robertsonian translocation variants (4%). About 50% of translocation forms are inherited from parents and 50% are de novo mutations. The critical segment responsible for the formation of the main symptoms of the syndrome is the 21 q22 region.

The main diagnostic signs of the syndrome are: a typical flat face, a Mongoloid eye incision, an epicanthus, an open mouth, macroglossia and dental anomalies, a short nose and a flat bridge of the nose, excess skin on the neck, short limbs, a four-finger transverse palmar fold (monkey groove). Of the defects of internal organs, congenital defects of the heart and gastrointestinal tract are often noted, which determine the life expectancy of patients. Mental retardation is usually of moderate severity. Children with Down syndrome are often affectionate and affectionate, obedient and considerate.

The syndrome of deletion of the long arm of chromosome 21 (syndrome 21 q-). Allocated into a separate nosological group in 1970. Diagnostic signs of the disease are: low birth weight, **microcephaly**, antimongoloid eye incision, epicanthus, wide nose bridge, large low-set deformed ears with an enlarged auditory canal, micrognathia. The main signs also include scoliosis, clinodactyly, inguinal hernia, clubfoot, and cryptorchidism. Their defects of internal organs are observed heart defects and kidney pathology (hydronephrosis, doubling of the renal pelvis). Delayed psychomotor development was noted. With gross malformations, children die in the first weeks of life, although patients are described at the age of 50.

Chromosome 22

The number of genes - more than 800

A list of some diseases associated with the genes of chromosome 22:

- amyotrophic lateral sclerosis;
- malabsorption of glucose and galactase (SGLT1);
- neurofibromatosis (NF2);
- Di-Georgie syndrome (DG3);
- chronic myeloid leukemia (BCR);

Ring chromosome 22 syndrome. It was isolated as an independent syndrome in 1972. The main diagnostic signs of the disease are: **microcephaly**, epicanthus, hypertelorism, large protruding eyes (“doe's eyes”), cleft in the tongue of the ineb, thick eyebrows and eyelashes. In addition, hip dysplasia, clinodactyly and syndactyly are noted. Defects of internal organs are not typical. Mental retardation is manifested by both mild and severe oligophrenia. Patients are easily excitable, frequent mood swings, impaired coordination, as well as gross speech underdevelopment, up to its absence, are noted.

Chromosome X

The number of genes - more than 1400

Women have two X chromosomes, men have one X chromosome and one Y chromosome. One X chromosome is inherited from the mother, and the other (in women only) from the paternal grandmother.

A list of some diseases associated with genes on the X chromosome:

- almenoleukodystrophy (ALD);
- hemophilia A (HEMA);
- hyper IgM syndrome (TNFSF5);
- Duchenne muscular dystrophy (DMD);
- paroxysmal nocturnal hemoglobinuria (PIGA);
- Alport syndrome (COL4A5);

- Lesha-Nayan syndrome (HPRT1);
- Martin-Bell syndrome (FMR1);
- Menkes syndrome (ATP7A);
- Reth syndrome (MECP2);
- X-linked severe combined immunodeficiency (IL2RG)

Shereshevsky-Turner syndrome (monosomy of the X chromosome).

This is the only form of human monosomy that can be detected in live births. The main clinical signs of the disease are: dwarfism, pterygoid skin folds on the neck, a short neck with a low hairline, swelling of the hands and feet of newborns, a barrel chest, valgus deviation of the knee and elbow joints. Patients have primary amenorrhea and sexual infantilism, infertility, skin hyperpigmentation, decreased vision and hearing. Congenital heart and kidney defects are common. Intellectual development is within normal limits.

X-chromosome polysomy syndrome. Forms 47, XXX, 48.XXXX and 49.XXXXX are cytogenetically identified. With an increase in the number of X chromosomes, the degree of deviations from the norm increases. In women with tetra- and pentasomy X, mental abnormalities, skeletal and genital anomalies are described. Women with karyotype 47.XXX in full or mosaic form generally have normal physical and mental development, and intelligence is within the lower limit of the norm. These women have irregular menstrual periods and secondary amenorrhea, but they may have offspring.

Klinefelter's syndrome. Described in 1942. Cytogenetic variants of the syndrome can be different: 47.XXY; 48.XXYY; 48.XXXY; 49.XXXXY. Both full and mosaic forms are noted. Patients of tall stature with disproportionately long limbs, severe gynecomastia and female-pattern hairiness. In childhood, they are distinguished by a fragile physique, and after 40 years they are obese.

Hypogonadism and hypogonitalism are important diagnostic features. Decreased sex drive, impotence and infertility are characteristic. IQ below 80.

Fragile X syndrome

The main diagnostic signs of the disease are: mental retardation, prognathism, a broad face with features of acromegaly, large protruding ears, macroorchidism in the postpubertal period, autism, hyperkinesis, poor concentration, speech defects, more pronounced in children. There are also connective tissue abnormalities with hyper-extensibility of the joints and mitral valve prolapse. Only 60% of men with a fragile X chromosome have a relatively full range of clinical signs, 10% of patients do not have facial abnormalities, 10% have only mental retardation without other signs, and 30% of patients do not have macroorchidism.

The fragile X-chromosome syndrome is interesting for its unusual inheritance and high population frequency (1 in 1500-3000). The main symptom is mental retardation.

Chromosome Y

The number of genes - more than 200

The Y chromosome contains the SRY gene, which determines male sex and is responsible for regulating the activity of the testes. Women have two X chromosomes, men have one X chromosome and one Y chromosome.

If we talk about diseases associated with the Y chromosome, it is worth noting that:

- there are cases when the cells of the male body contain two X chromosomes and one Y chromosome (Klinefelter syndrome) or two Y chromosomes and one X chromosome (XYY syndrome);
- in some cases, damage to the SRY gene is observed with the formation of the female body XY;

- very rarely, however, there are cases when the cells of males contain more than one additional copy of the Y chromosome (XYYYYY);

Y-chromosome polysomy syndrome. Most individuals in physical and mental development do not differ from healthy ones. They are usually tall and in 50% of cases can have normal offspring. With this syndrome, there are some behavioral features: a tendency to aggression, antisocial behavior, homosexuality.

The diseases discussed below are manifested by an increased frequency of chromosomal aberrations, which, as a rule, are not associated with damage to strictly defined chromosomes and chromosomal segments (with the exception of Louis-Bar and Nijmegen syndromes).

Wolf-Hirschhorn syndrome. Described in 1965. The main clinical signs of the disease are: low birth weight, **microcephaly**, coracoid nose, hypertelorism, micrognathia, small mouth with the corners of the mouth. The ears are large, protruding, the lobe and curl, as a rule, are not pronounced. Cleft lip and palate are common. Boys have hypospadias and cryptorchidism. Internal defects include polycystic kidney disease and damage to the cardiovascular system. The leading clinical sign is delayed psychomotor development.

Mosaic mixed aneuploidy with **microcephaly**. It is characterized by microcephaly, mental retardation and growth retardation.

Werner's Syndrome (Premature Aging Syndrome). Described in 1904. The main diagnostic signs are: premature graying and baldness, atrophy of subcutaneous fat and muscle tissue, scleroderma, cataracts, early atherosclerosis, endocrine pathology (diabetes mellitus). Characterized by infertility, gynecomastia,

amenorrhea, a high voice, a tendency to malignant neoplasms. Patients die at the age of 30-40.

Roberts Syndrome. Described in 1919. The main diagnostic signs are: defects of the upper and lower extremities (from reduction to phocomelia), most often the bones of the forearm and lower leg are absent, the length of the arms is half the norm. In addition, cleft lip and palate, **microcephaly**, sparse silvery-white hair, deformed auricles are expressed. Of the internal defects, a bicornuate uterus, polycystic kidney disease, and congenital heart disease are noted. Most babies with Roberts syndrome are born dead or die in the neonatal period.

ICF syndrome. The main clinical signs are facial abnormalities, IgA and T cell deficiencies, upper respiratory tract infections, and a tendency to malignant neoplasms.

Porokeratosis Mibelli. It manifests itself in a kind of skin rash with crater-like deepened areas of atrophy and centrifugally spreading skin flaps surrounded by narrow horny ridges. It begins in middle age and can lead to skin cancer, especially on the limbs.

Bird-headed dwarfism or Szekel syndrome. It is characterized by low birth weight, dwarfism, small head, beak-like nose, large eyes, narrow face, mental retardation, small brain, pancytopenia, and an increased frequency of chromosomal aberrations.

Trisomy is a common word.

The most common in humans is chromosome 16 trisomy (more than one percent of pregnancies), which results in spontaneous miscarriage in the first trimester of pregnancy.

The only viable autosomal trisomy in humans is chromosome 21 trisomy, which causes Down syndrome. Trisomics on chromosomes 13 (Patau syndrome) and 18 (Edwards syndrome) can survive to birth, but are characterized by significant

developmental disabilities and early postnatal mortality. Trisomies in other autosomes lead to early embryonic mortality. It is characteristic that chromosomes 13, 18 and 21 are chromosomes, occupying the last three places in the number of genes among autosomes

The frequency of newborns with trisomy on chromosome 21 in European countries in 1990-2009 was 11.2 cases per 10,000 newborns, on chromosome 18 - 1.04 cases per 10,000, on chromosome 13 - 0.48 cases per 10,000.

Proteus syndrome

A very rare condition in which bones grow abnormally and unnaturally quickly. As a result, the proportions of the figure are violated, and the person looks like a mutant. The first signs of Proteus syndrome appear already in the second year of a child's life. This disease does not respond to treatment. Pleases only one thing - it occurs in one person in a million.

Epidermodysplasia verruciform

A person suffering from this disease looks like a revived tree. His body is covered with terrible growths and warts, which are almost impossible to get rid of.

In 2007, photographs of 34-year-old Indonesian Dede Koswara appeared on the Internet. Due to illness, his arms and legs have increased in volume several times.

In 2008, the patient underwent surgery: doctors removed 6 kg of growths and transplanted new skin into him. True, two years later, the disease again made itself felt.

It is believed that epidermodysplasia verruciformis is of viral origin, but it can also be caused by genetic mutations. As a rule, growths form on open areas of the skin.

Hypertrichosis

This disease is characterized by excessive "vegetation" caused by abnormal formation of hair follicles in the fetus.

It is extremely rare - about one person in a billion.

Progeria

People with this genetic disorder are hairless and their skin is tough like cardboard. The characteristic signs of progeria are slow growth, mutations of internal organs and bone abnormalities caused by early aging of the body.

Currently, only 80 cases of the birth of children with this pathology are known. Only one of them could make a successful career. A resident of South Africa, Leon Botha, despite his illness, achieved recognition: the young man worked as a DJ, was a member of a hip-hop group and led his own video blog. He died in 2011 at the age of 25, the day before his next birthday.

Explanation of terms.

Cryptorchidism - means "hidden testicles" - this is the location of the testicles outside the scrotum (in the abdominal cavity or in the inguinal canal), or abnormal descent, in which the testicle, leaving the inguinal canal, changes direction and is located under the skin in the groin, on the thigh, in the pubis or perineum. More often, due to morphological features, right-sided cryptorchidism occurs.

Hypospadias (from the Greek hyospao - pulling down, tearing from below), congenital underdevelopment of the urethra, consisting in the absence of its lower wall, and the outer opening of the canal does not open in the usual place (glans of the penis), but on the lower surface of the penis, scrotum or perineum ...

Hypogonadism (male) is a pathological condition caused by insufficient secretion of androgens.

Nanism (from the Greek *nános* - dwarf), an abnormally low human height (for men below 130 cm, for women below 120 cm), usually caused by damage to the endocrine glands; the same as dwarf growth.

Hypoplasia (from *hypo* ... and Greek. *Plásis* - creation, formation), hypogenesis, underdevelopment of tissue, organ, part of the body or the whole organism.

Cranial index - the ratio of the maximum width of the cerebral box to its maximum length (an analogue of the cranial index on a living person is the head index). One of the most important racial characteristics.

Dolichocephaly or dolichocephaly, i.e. long-headedness; *dolichok* (ts) *efaly* - actually people with a long head, also long skulls.

Galactosemia is a hereditary disease, which is based on metabolic disorders on the way of converting galactose into glucose

Hemochromatosis (pigmentary cirrhosis, bronze diabetes) is a hereditary, genetically determined disease, manifested by a violation of iron metabolism with its accumulation in tissues and organs.

Ehlers-Danlos Syndrome (syn. Ehlers-Danlos Syndrome) also known as "skin hyperelasticity"

Vandenburg Syndrome - Some forms of hearing loss are hereditary; at the same time, hearing impairment can be combined with eye damage (Usher, Alstrom, Refsum, Marshall, Rosenberg-Chutoriano syndromes), skin diseases (Vandenburg syndrome),

Essential tremor is a disorder of the nervous system that causes rhythmic tremors.

Von Hippel-Lindau disease is a hereditary tumor syndrome, suggesting the development of various benign and malignant neoplasms (hemangioblastoma of the central nervous system and retina of the eye, tumor of the inner ear, carcinoma and kidney cysts, pheochromocytoma, neuroendocrine tumor and cysts of the male pancreas and testes broad ligament in women). Von Hippel-Lindau disease is the most common cause of hereditary kidney cancer.

Brugada syndrome is a clinical and electrocardiographic genetically determined syndrome characterized by frequent syncope conditions against the background of attacks of ventricular tachycardia and episodes of sudden clinical death, which can recur if a person is resuscitated in time.

Huntington's disease (Huntington's syndrome, Huntington's chorea or Huntington's chorea) is a genetic disorder of the nervous system characterized by a gradual onset, usually between the ages of 30-50, and a combination of progressive choreic hyperkinesia and mental disorders.

Narcolepsy (from the Greek *nárke* - numbness and *lepis* - an attack), a disease, the main symptom of which is attacks of irresistible drowsiness. N. can occur after infections (epidemic encephalitis, malaria, etc.)

Fibrodysplasia ossifying progressive or FOP (from Latin *fibro* - fiber, *dis* - disorder, violation, *plasis* - structure, structure and *os*, *ossis* - bone, *facio* - to do; ossification) "soft connective tissue that progressively turns into bone."

Sandhoff's disease, or GM2-gangliosidosis, type 2 (or 0-variant), is caused by the absence of hexosaminidase (both A- and B-isoenzymes of hexosaminidase)

Cockayne's Syndrome (CS) A rare disorder described by Cockayne in 1936 presents with mental retardation, optic atrophy, dwarfism, sensorineural hearing loss, increased skin sensitivity to sunlight, cataracts, and retinal pigmentary degeneration. In addition, cerebellar disorders, pyramidal disorders and extrapyramidal disorders, neuropathy, avian face and normotensive hydrocephalus are possible.

Williams syndrome ("elf's face" syndrome) is a syndrome that occurs as a result of hereditary chromosomal rearrangements, the sufferers of which have a specific appearance and are characterized by a general retardation of mental development with the development of certain areas of the intellect.

Pendred's syndrome (Pendred's disease) is a genetically determined disease characterized by congenital bilateral sensorineural hearing loss combined with vestibular disorders and goiter (enlargement of the thyroid gland)

Werner's syndrome (O. Werner, b. 1874, German doctor; synonym of Progeria adults s) is a hereditary disease characterized by premature aging of the body and manifested by atrophy of the epidermis, appendages of the skin and skeletal muscles, the development of cataracts, hypogenitalism, insular insufficiency, etc.; observed more often in men aged 20-30;

Tangier's disease (analfa-lipoproteinemia) is a rare hereditary disorder characterized by lipid metabolism disorder

Refsum's disease is a rare hereditary disease in which phytanic acid (a product of the breakdown of fats) accumulates in tissues.

Best's disease (F. Best, 1878-1920, German doctor; syn. Macular degeneration for children) family-hereditary macular degeneration, detected from the moment of birth or in childhood, characterized by a decrease in visual acuity

The phenomenon of hybridization.

Let us mention one more phenomenon from genetics, which is important for understanding. The phenomenon of hybridization. On this, in particular, unknowingly, Nikita Khrushchev got burned. The phenomenon is that if two very different varieties of plants are crossed, then very powerful hybrids are formed in the first generation. Only in the first generation. Because one complete set from one parent and one complete set from the other. Both sets are full-fledged, tenacious, and mutually complementary. With subsequent crossing, in the second, third generation, the sets begin to mix and their usefulness is lost. Degeneration sets in. This is the kind of hybrid corn that Nikita Khrushchev bought from the United States. At the first sowing there was an unprecedented harvest. But on the second and subsequent years, the harvest fell below the usual Soviet harvest.

The phenomenon of hybridization is also present in humans. If you take the ancient pure lines, Mongoloid and Slavic, and cross, you get very powerful hybrids. And these hybrids grow up and go to conquer the whole world. This is where all kinds of Ruriks, Monomakhs, Genghis-khans, Kublai-khans, Batyi came from. And also with other mixtures of Napoleons and Macedonian. These are the first hybrids from a pair of distant peoples. Or just successful hybrid combinations that sometimes arise in any generation with a large amount of source material. Including Putin. It is important that several main chromosomes, there are only 3-4-5-10 of them, are from two different peoples. It was on these Slavic-Yakut hybrids that Russia grew. Russia grew, grew and grew.

The Negro-Russian hybrid Pushkin became a great poet.

However, the phenomenon of hybridization, as already mentioned, has a downside, degeneration. The first generation of hybrids is very strong. But subsequent generations (when crossed with the same hybrids) are getting worse and worse. And it ends with massive deformities of both the body and the brain. Russia today is packed with freaks and morons. For this reason, there is not a single poet among the 200 descendants of Pushkin. And among the 250 descendants of Einstein, there are no outstanding scientists.

But Russia, with its 140 million population, is still rich in successful genetic combinations that become leaders. Their leadership qualities are above average and they get into politics. Lenin is a typical example of Slavic-Yakut confusion. And successful leaders in this mixed Great Russian people will appear for a thousand years. And they will create the illusion of superiority of the Great Russian nation over the Slavs. Until the phenomenon of hybridization is completely extinguished from degeneration. But for this, the main component of the people of Russia must deprive the sway of pure geneticists from the outside: Slavs (Ukrainians, Belarusians, Balts), Chechens, Armenians, Georgians.

A new phenomenon of hybridization can arise only in the event of a new mixing of peoples, that is, of the type of the Russian-Chinese war (or Russian-Japanese), and mass violence of the victors over the vanquished. In a peaceful life, mixing of nations is rare. Everyone is drawn to their nation. Cross-marriages do not come from a good life. The Hollywood exaggeration, when in the family one spouse is white, and the other is black, this is of course nonsense.

Thus, modern Russia is a product of ancient wars and violence. They are hybrids that are unstable and will inevitably disintegrate and degenerate. And Russia will inevitably face an international collapse. By the way, like the United States, which is also a mixture of nations. They are strong now. Interethnic marriages occur uncontrollably. But then there will be a recession. Both

Russia and the United States will disintegrate into small states in which a genetically homogeneous population is stabilized.

That is why Ukraine and Belarus left this Russian meat grinder. They retain their Slavic mono-nationality. So is Poland. And Russia will have a little more fun with hybrids, but will soon be blown away and fall apart. And several new purely Slavic states will appear: the Ural Republic, the Voronezh Republic, the Kuban Republic, and so on.

For some time now the Japanese have understood the harmfulness of hybrid mixing of peoples. Therefore, Muslims are not allowed to visit. And do not welcome interethnic marriages.

The tragedy of human hybrids.

The first generation of hybrids will be great. It has two sets of 23 pure line chromosomes. And these kits help each other build an organism. The first generation of hybrids gives birth to leaders. Then subsequent generations somewhat worsen the quality of the hybrids, because pairs of chromosomes from the same people begin to occur in the phenotype, inconsistencies begin, and this does not improve the phenotype. Nature gradually begins to "rest" on the children of the leaders. And even more on their grandchildren and great-grandchildren. And then one day, on some generation, maybe on the fifth, maybe on the tenth, maybe on the hundredth, the descendants have pairs of chromosomes that build adjacent, contiguous parts of the body. In this case, one pair belongs to one nation, the second pair belongs to another nation. And suddenly it turns out that one pair, from one nation, with crossing, and the second pair, from another nation, without crossing. These pairs of chromosomes do not fit. And they can't build the body parts that fit together normally. And this instantly leads to the deformity of the phenotype. It doesn't matter to what kind of deformity, bodily or cerebral. And all this would be idle theorizing if the whole of Russia was not filled with monsters and inadequacies. With its 30 million Great Russians, Yakuto-Slavic hybrids. Hybrids from different nations, even from different races,

who lived and evolved separately for 40 thousand years. And if these inadequacies did not climb into power ...

Why the dynastic principle of choosing a king (king) does not work. As a rule, the king (king) goes to the top of the people because of its hybrid advantages. However, these benefits are usually not passed on to children. Nature rests on children.

Possessed by a genetic demon.

There are people who are very active politically. They talk a lot, campaign for something, for something and with someone they are constantly fighting. And they always win. And then disasters begin. But from time to time, Nature betrays their genetic secret. Little is said about this, but there is such a secret. These are the so-called "irregular genes". They exist in humanity, they are passed on, but they are not manifested in every generation.

One of these genes is the gene for Downism, trisomy. They explain to us that it's just three chromosomes # 21 in one person, they say it's an accident. Or the result of a late birth. No, gentlemen, not an accident. This is a special chromosome number 21, which sometimes, not regularly, drags along the second chromosome number 21 to get together into a homozygous egg or sperm. This chromosome even in an organism with a normal number of chromosomes interferes with the normal functioning of its partner No. 21 and the whole organism. This is a defective chromosome. Surely in history there were many such politically active ones. They committed terrible crimes. Not knowing what they are doing.

And there are only two such representatives. Boris Yeltsin, his Downism chromosome manifested itself in his grandson. But this means that it was and acted with Yeltsin himself. It was a hidden down.

Figure 06.

Irina Khakamada. Her daughter turned out to be down. But it means that all the political activity of Khakamada (and she was so active until she gave birth) had a pathological basis.

Figure 07.

The famous Rambo, Rocky, The Expendables, and other super-action movies, Sylvester Stallone. Down jumped out at the youngest son. But there is no doubt that this genetics climbed out in his scripts and movie characters. All his films, this is initially a nondescript person (autistic), but after trying to mock him, he turns into a monster. These are films about myself.

Figure 08.

<http://inva.tv/images/stories/fruit/d2.jpg>

The statistics in the West are relentless: autism affects one in 88 children, Down syndrome affects one in every 700. Many celebrity families have faced developmental disorders in their own children, but have not given up and, moreover, have made a huge contribution to the study of these difficult diseases. Sergio, the youngest son of Sylvester Stallone, was diagnosed with autism at the age of three. For the actor, this news was a real blow. Little Sergio had a hard time adapting to the world around him: he could not in any way establish contact even with loved ones, not to mention the rest of those around him. The bitter irony is that as a child, Stallone himself was almost recorded as autistic, but he turned out to be healthy. Sergio Stallone is now 35 years old. He is not a public person, does not maintain contacts with journalists, does not attend social events, but lives calmly and quietly. His father helps him with medical care and visits him regularly.

Unfortunately, doctors hide the presence and action of pathological chromosomes. Indeed, there are actually many more of them.

Many politically active people did not have children, and sometimes they were not at all capable of copulating with the opposite sex. Hitler, Lenin, Novodvorskaya, Merkel, Macron, Maya Sandu (Moldova). This is where their destructive political activity came from. They would be advised by a geneticist. Not

politics. And then normal people have to fix everything that the hidden down has done for decades. The Germans must digest the million Muslims that Merkel gave them. And Russians should live in poverty and fear for 3 decades already. Putin seems to be normal. But he is bound by the obligation to preserve all of Yeltsin's affairs. He clings to power. He knows that leaving power will coincide with leaving life. And if after Putin comes another active hidden down ?!

It seems that only normal family people with children should be allowed into the upper floors of politics. Although it would not have saved us from Yeltsin. But the consequences of Yeltsin would be easier to deal with, rather than preserve them, as Putin is doing.

Do politicians need genetic testing?

Natural phenomena are close to the topic.

Human personality.

Somewhere not far behind the frontal bone is a region of the brain that defines a person's personality. Maybe just behind the frontal bone itself, or maybe deeper. Let's try to mentally imagine where it is, in what place of the head, is this our I? It seems that after all, not just behind the frontal bone, but deeper. For example, I feel my "I" somewhere above the palate. So the term "I" in different languages seems to sound differently, but at the same time the language is pressed against the palate, that is, just at this time it indicates in which direction this Russian "I" or the English "I = Ay" or German "Ich = Ich (with a soft sign)". When pronouncing the words "I", "I", "Ich", the language is pressed against this "I" in the brain, above the palate ..

There is a huge natural variation in personality parameters among different people of the same people or nation. There are broad, multifaceted personalities. In contrast, there are narrow personalities with limited interests. But all personalities of people,

both narrow and wide, are united by a common device: they consist of two intergrown and intergrowing branches. Each is built with its own set of chromosomes. Precisely of the two. Moreover, one of these branches can be wide, and the second narrow. But during construction, a kind of "coordination" takes place and a compromise version of the personality is built. And all this is irrespective of the division of the brain into hemispheres, the convolutions of which may also be asymmetrical to one degree or another.

Mosaicity of the body.

As is known from publications, each tissue of a living organism has a mosaic structure at the cell level under a microscope. According to our version, this mosaic is of multiple nature. 1) Mosaicity is created as a result of the fact that there are two types of cells in each tissue: cells built by chromosomes from different sets. 2) In each set, not one, but two, three or more chromosomes can participate in the construction. For example, almost all chromosomes take part in the construction of the brain. This version naturally follows from our theory of the Origin and Essence of Life. Thus, taking into account that the entire organism grows from one cell, all tissues of the organism are, as it were, two or more intergrowing and intergrowing branches of a tree, compressed into one dense tissue or bone.

There is also a narrower hypothesis, which we rejected, that each tissue builds only one pair of chromosomes. That is, there are about 23 types of tissues in a person. Although, in principle, there can be more if, for example, one section of the chromosome builds one tissue, and another section of the same chromosome builds another tissue. This is sometimes possible. But these theses are not very important in our presentation. The main thing is that each tissue of the body (muscles, bones, brain, liver, etc.) is, as it were, two delicate spatial structures pressed into a single whole, intergrowth, maximally intertwined and intergrown.

Straighten your fingers and slide the fingers of one hand through the fingers of the other hand. - This is how all tissues of our body are arranged. We have two sets of chromosomes and each branch builds its own set of chromosomes. Our brain is like that. Not to be confused with hemispheres! This is different. This is a different perspective. Each hemisphere consists of two intergrowing branches.

Now we are all a little familiar with cybernetics and roughly understand the structure of the robot. In it, each limb, each joint is accompanied by a small "train" to the Control Center, where the Robot Behavior Program is located. The human body is very similar. A nerve train goes from each organ to the brain or spinal cord. Moreover, you should pay attention to the fact that this nerve train ends with a Bundle of nerve cells. It would be more accurate to say that from each organ there are several trains carrying different information. Because, for example, a finger not only serves for grasping, but also for sensing temperature, for sensing the relief of an object. Each of these functions has its own train, ending with its own bundle of nerve cells. All these "bundles" actually form the brain.

Having adapted to live on earth, the anthropones (human ancestors) began to increase in size: now their body could evolutionarily increase, and together with the body, the brain could increase. This is how the terrestrial evolution of the anthropones began. The Anthroponians invented more and more new tools of labor, hunting, and mastered more and more new technologies. We can say that the Skillful Preman has appeared.

But this was not yet a modern man. The prehuman has not yet looked in the face of Information. And one day, a very clever anthropon drew a picture to represent something. Most likely - a woman, or a wild animal, or a hunt. I showed it to others and they understood it. This is how informative messages appeared. So evolution moved in the direction of its last stage: modern man or just Man.

Right-handed and left-handed.

As will be understood from the chapter on the brain, the phenomenon of the mind consists in the involvement of a number of brain cells to model a situation or a process. The more difficult the task is posed to the primate, or the more complex operations are required, the more brain cells must be involved in the solution. You can't decide otherwise. Monkeys are able to solve simple tasks (such as knocking down a fruit with a stick), therefore they have some intelligence. But stone processing already requires an order of magnitude more skill, and a much larger number of brain cells and connections between them.

Sometime in the era of the anthropones, a differentiation of the hemispheres took place and Right-handers (Lefties) appeared. The essence of this phenomenon is that if both arms (legs) are the same in their capabilities, then each of them is equipped with its own bundle of cells in the brain. The size of these bundles is small, it is limited by the total volume of the skull, and their evolution has practically stopped. But such a mutation appears when one bundle (from the right hand) becomes almost twice as large, and the other (from the left) is very small. As a result, the left hand becomes inept, generally incapable of this operation. But the right hand becomes very skillful. And the possession of this hand with some sharp stick or stone ax becomes very perfect. Such an anthropon successfully hunts, successfully makes tools of labor and combat, and he wins in battle and in labor of rivals-anthropones, who have the same hands.

This is how the differentiation of the cerebral hemispheres took place. At the same time, a colossal leap in the work of the brain took place, it became almost twice as efficient in efficiency. Anthropon immediately became Skillful. And at this time there was a general increase in the brain.

Territorial and herd principle.

All animals use either the territorial principle or the herd one. The leaders of the herd (flock) control either the boundaries of the

habitat, or all members of the herd (flock). As a rule, it does not happen at the same time.

All animals have means of attack - defense.

All animals can move through their territory, the boundaries of which are marked both by themselves and by neighboring animals.

Man in his evolution has reached such a level that

- can move around the globe
- can declare the entire globe as its territory
- possesses such means of attack - protection that it can destroy all of humanity and even all animals on Earth.

More precisely, it will not be one person. It will be one dedicated people who can easily imagine themselves as the best, and then destroy everything. And then he will take a break from degeneration.

In this way, a person is dangerous to himself. He is dangerous because of his strategic lack of foresight. With their diletantism, bravado. Like President Putin, who has put his stupid friends in all the important chairs, and hopes that the economy will soon make a breakthrough.

The phenomenon of interference in evolution.

How does technological evolution take place.

Let's look at a herd of monkeys living in some grove, in the trees. Let's try to assess the level of their intelligence. What can they do?

- Climb trees, pick fruits, catch insects, go down to the ground, pick out roots, worms from the ground, find edible plants.
- Do they have a place to live, a fire to warm them, tools of labor and hunting? - Of course not.
- Is there an account for them, writing? - Of course not.

That is, at each stage of evolution from monkeys to humans from the numerous intellectual set, something for our ancestors already exists, but something is not yet known and for them, as it were, does not exist.

But now one of the developed anthropoid masters something new. Will all members of the herd immediately master this new business, tool, etc.? - Alas, far from it. And even most likely this new will meet resistance from the herd. Many members of the herd are not able to master this novelty. The herd needs to be shown, to prove that this new is useful and necessary for the herd.

Someone came up with a long pointed stick - a spear. It is an effective hunting weapon. He shows the spear in action. Everyone is convinced that this is a necessary thing. But then there is the "interference" of this spear. In all areas of herd life - both for solving personal problems and for the hierarchy in the herd. Ultimately, after several generations, there is a monstrous extermination of all who could not learn to wield a spear. It is very likely that the spear was invented many times and only once, only one herd - our current ancestors were able to save their family from complete mutual extermination and death with the help of this spear.

Similar events took place after the invention of the pistol. The Russian government is still afraid of mutual extermination and does not allow the free circulation of short-barreled weapons. But in America they were not afraid and won. There Colt made everyone equal. And the people are not afraid of corrupt judges and officials. Weapon fluency is a colossal step in evolution, despite all its disadvantages and dangers. Until Russia takes this step, it will not move forward in economics and evolution.

Evolutionary processes in humanity.

The essence of global processes is that humanity is evolving. Somewhere, once emerging from a mutation, the strong expand their living space and their number. The weak, respectively, reduce their entire space and quantity. Equilibrium is not always achieved by peaceful means.

Evolution occurs in small leaps, mutations in one of the chromosomes. Each mutation in one of the chromosomes (and there are 23 pairs of them) is tested for suitability, for survival in

the collective of other chromosomes, for the survival of a new phenotype. The overwhelming majority of chromosome mutations turn out to be negative and their unfortunate phenotypes, having suffered a lot and suffered in their lifetime, leave this celebration of life disappointed. But once a positive mutation has arisen, despite all its unexpected properties, it begins to multiply and spread around the world. Whether other people and nations like it or not. Anyone who doesn't like it will be ground to dust. Once upon a time, 60 million years ago, the Fororakos bird with a huge beak appeared in America by mutation and existed for a long time, which stopped flying, but hammered all the animals with this beak and survived perfectly. A purely large beak mutation turned out to be positive. She lived, she reigned for many millions of years, despite her ugliness and unnatural structure. But once small schooling mammals arose, which with the whole flock bit this bird and thereby destroyed this inadequate branch of evolution.

Today something similar is happening with hyenas. These very ugly creatures, in which women have changed roles with men, have found weakness in the class of large herbivores. Namely, their eggs, which hang freely outward. And the female hyenas have adapted, breaking all holy laws, to cling to these eggs, after which the immobilized bulls, still alive, are torn into small pieces by their friend. Undoubtedly, the evolution of the boks will go towards drawing the eggs into the stomach, and when they are fully drawn in, then the hyenas will ingloriously leave the stage of evolution.

It is possible that today's elephants have already passed this stage, and there were similar abominable hyenas that clung to the eggs of the elephants. And the elephants had to suck in their eggs, after which these monsters died out. I don't know how with this case with rhinos and hippos.

Modern man, including all current races and nations, arose 135 thousand years ago and settled from Africa to the east and north across the globe, sweeping away all previous versions of monkey

ancestors and monkey relatives. Just like new generations of computer processors sweep away all old processors and computers built on their basis. The improvement of computers does not stop for a single day. Each innovation begins its development while the release of older versions of computers continues. The same thing happens with humanity. Somewhere else, the Chinese are multiplying and settling around the world, but in another part of the world more progressive mutations have already arisen, which multiply and are already settling farther and farther and in 100-200 years will expel the Chinese back to China. Or vice versa.

Evolution paths are not predictable. There were our beautiful strong, dexterous ancestors from monkey ancestors. Wow, how they ran through the trees! But one of these ancestors, by no means the most powerful and dexterous, came up with the idea of picking up a stone and a stick. How dishonorable and vile these pioneers in the use of weapons looked in the eyes of their contemporaries and tribesmen! How is this possible?! Shock! The devil taught you such meanness, with a stone and a stick on a kindred! But alas, those who were able to repeat this action went further along the evolution. Moreover, we all, today's humanity, are the descendants of those scoundrels who neglected the natural rules of Nature. And those who did not take a stone or a stick in their hands, there are very few left, their account today is not even millions, but thousands: gorillas, chimpanzees, orangutans ... And a small number of people mixed with the rest of humanity.

When evolution branches.

Each species in the process of evolution better and better adapts to external conditions and internecine competition. Each species masters more and more complex behavioral programs and receives more and more perfect organisms. At the same time, new, more perfect organisms completely replace the old, less adapted ones. And the species evolves as a whole. This has always been the case in the evolution of the living.

But each time there comes a stage when an evolutionary branch departs from the main species, which acquires new qualities. From time to time, a small stream branches off from the main direction of evolution, filling a new ecological niche. At the same time, it turns out that for mutual competition both of these types, old and new, are both equivalent. They do not exterminate each other. They exist in parallel, and their niches only partially overlap. So, a new species with limbs - fins - budded from the primary aquatic worms. This species evolved into fish. But the primary worms did not disappear either. Amphibians and reptiles branched off from fish. Mammals, birds and marsupials branched off from reptiles. Monkeys have sprouted from mammals and have chosen life in trees. But land mammals did not become extinct from this either. Etc. The main trunk does not disappear. But many intermediate species are likely to disappear, which enjoy only temporary success in evolution. Nature is complex and diverse.

With the development of the mind, a new ecological niche opened up.

If we recall the comparison of a person with a book, then we can say the following. Alas, the size of this book, the number of pages in it, has a very severe limitation. It is related to the size of the skull. If this size increases, then very, very slowly, because it is associated with the overall size of a person. And these dimensions are associated with the size of the dwelling, the width of the streets, the height of the transport, and so on. This thing is very inert. Thus, a person is not able to directly keep up with scientific and technological progress by increasing the size of the brain. Man is absolutely unable to master all types of activities now. There is a division of labor. And alas, inevitably there is a division of human evolution into two types: one is more suitable for physical labor, and the second for intellectual. At least initially. And then humanity will be fragmented more and more. Although options are possible: an increase in the allocation of memory substances (in the age range of 15-25 years, for the accumulation of knowledge) and something else.

And we ourselves can influence this, which direction to choose. But we don't know in which direction yet.

New laws of genetics.

The center of phenotypes and the center of genotypes are not the same. This means that the very best phenotypes are born much less than those that are worse. And most of all are born just those that are worse. For this reason, wars, etc. - adjust the gene pool. And all gene abnormalities tend to progress.

Usually, the vast majority of mutations are negative, impairing genetics. Such mutations in the animal kingdom are quickly or slowly eaten away by predators. But positive ones are very rare. Examples of positive mutations include, for example, horns in bulls and antelopes; the horn on the nose of the rhinoceros, the trunk of the elephants. Initially, bumps appear on the head, which help to hit the attacker harder and survive. Possibly, these cones positively manifest themselves in intraspecific fights for the female. As a result, over time, the entire herd becomes with such bumps. Selection is taking place and you can't get away from it. There are many less obvious positive mutations in animals.

In humans, the last strong positive mutations can be noted: the narrowness of the eye slits in Mongoloids (from snow blindness and snow blizzards); a penchant for communism among the Mongoloids; black skin color in blacks (sun exposure); differentiation of the cerebral hemispheres (better possession of melee weapons). The latter also applies to what is stated below.

Here's another classic scientific "paradox". Everyone will understand that in hot desert Africa human remains, bones, tools are much better and longer preserved. Therefore, they are found there. And in Russian latitudes, all bones rot in a decade or two, so they are found less often. But the conclusion is this: modern man comes from Africa. Or maybe he came from Europe and turned black for several millennia ?!

Complete analogy with the animal world.

In human civilization, and in Russia in particular, there is an exact analogy with the animal world. Here is a herd of bulls. These herds are huge. They move in unison and devour grass. They establish order and hierarchy. This is socialism. In its purest form. They fatten meat, work. Bullish rules reign in the herd: who is stronger is right.

But then the lion's pride appears. And they start to frighten the bulls, then on the one hand, then on the other. This is an analogue of the democratic scarecrows, an analogue of the Kovalevs, Novodvorskys, Latsisov, Gorbachevs. They say we bulls live too harshly, butt a lot. They say it is necessary to do perestroika, and if someone was butted, then there should be publicity! Say, look how many fields are around, how much grass, and you are still huddling in a heap. You all rely on the state. They say there were repressions in the USSR, Stalin, the Gulag and protchivaya and protchivaya. They say you can live well only under capitalism.

Figure 09.

Bulls shy away from lions. They scamper inside the herd, but powerful males are not allowed there. There are young gobies and females in the middle. Panic, chaos begins. A whirlwind begins, the lions drive in a circle. In this whirlwind, old, weak, crippled, sick people fall into the clutches of lions. This is our day. Before our eyes, they rob the old, crippled, sick. They are ruining medicine. They rob the old people. When the democrats get

drunk, they may grow kinder (like in the West), and they themselves will roll aside. And it is quite possible that at this moment the power over the herd will be taken away again by the communists.

Optional: Do women have the right to orgasm?

August 29, 2017 7:13 am

When a person in his evolution entered the era of reason, speech, the accumulation of information, texts, he did not understand and still does not understand that the accumulated information can damage the very natural attitudes inherent in instincts. Because understanding oneself as a person is very difficult and slow. Nature is too complex to be understood by our still embryonic mind. Nature has evolved over millions of years, and human life is a million times shorter. A person without thinking, immediately grabs everything that he likes. Grilled meat? - Like. I grabbed it. As a result, the stomach has degraded and is no longer able to digest natural food: raw meat. Degradation of the stomach resulted in the inability to drink raw water from rivers and lakes. We must boil. Powder? - Fine. Let's make guns and shoot each other. These examples of misunderstanding of Mother Nature can be continued. But our goal is to study aspects of the sexual behavior of men and women.

The very first scientists noticed a similarity in the sexual behavior of men and women. And they came to the hasty conclusion that "husband and wife are one Satan." That is, everyone "wants" and everyone is trying to find a partner. However, there are some phenomena that make us wonder if everything is as we imagine?

At present, feminism and matriarchy are developing uncontrollably in Christian countries. The role of women in society is growing. At the same time, for some reason, the birth rate is decreasing, and the total number of inhabitants in highly developed countries is also decreasing. For some reason, observers and sociologists try not to pay attention to this

phenomenon, apparently hoping that it will dissipate by itself. An will not dissolve. There is one thing that will not let it dissolve, but, on the contrary, will lead to disaster.

Question. What does the process of mutual "wanting" of men and women look like? For men, this is a cyclical process. While sperm accumulates, desire gradually increases from zero to maximum. At the same time, starting with a certain amount of sperm, signals begin to go to the brain, to the "department of erotic fantasies". Erotic images, situations, plots, words, etc. appear in the brain. According to these fantasies, the man's immediate behavior also changes, he strives for his wife, girlfriend, mistress. Where the act of intercourse takes place, ejaculation, after which desire again drops sharply to zero. Apathy is an attitude towards intercourse after intercourse (popular). If there is no woman, then all erotic fantasies are easily overcome with the right hand. The result is absolutely identical. Then the desire begins to rise again smoothly as the stomach supplies the necessary substances to the seminal glands. Quite common among men is such a phenomenon as love, when one woman completely fills the entire department of erotic fantasies. After which the man gets wedged on this woman in his erotic fantasies, and in general in fantasies. However, finding himself in an intimate situation with another woman, a man in love without prejudice is quite capable of treason. That is, the real image before the eyes is stronger than the one imprinted in the memory.

And what does the process of "wanting" look like in women? There are similar moments. But there is an important difference. Nature does not joke with women and with the help of the right hand will not allow procreation to be avoided. Nature has made her cruel natural selection in such a way that a woman, starting from the age of maturity, has a "heartache", which also gives rise to "erotic fantasies". But this anguish never goes away or diminishes if the woman is not fertilized. No amount of masturbation will help here. A woman can experience 5 or more orgasms per night, she can work as a prostitute, taking 20 men a

day. A woman, unlike a man, does not consume noticeable amounts of nutrients of the body during orgasm. But her heartache does not go away until she is fertilized. Therefore, whether a woman experiences an orgasm or not, this in no way removes her heartache. Striving for sexual intercourse, a man seeks to experience pleasure, and lying under a man, a woman instinctively hopes to finally remove this natural curse, the torment of desire, and come to a feeling of freedom and happiness.

What is the mistake of public consciousness in relation to women? The mistake is that society has allowed women to follow the erroneous path of feminization: to seek the elimination of heart pain by increasing the number and duration of sexual intercourse. That is, it allowed us to apply an erroneous analogy with men. And while walking in trousers. However, in men, the number of acts is limited by the capabilities of the stomach and seminal glands. And each act really removes for a while the anguish of the heart and muffles erotic fantasies. But in women, nothing of the kind happens. Their heartache is constant: they paint, dress up, manicure, stand on heels, do intricate hairstyles, strive for attractiveness. At the same time, they are constantly unhappy with their husbands, seeing only in them the culprits of their dissatisfaction and constant desire for sex. And they have only one culprit: the fact that they are not pregnant. And this is assigned by Nature, and whoever violated it disappeared from the chain of evolution. As soon as a woman becomes pregnant, and instantly, in minutes, her heartache disappears, erotic fantasies disappear, the woman feels happy! This is what a woman's happiness is: to be pregnant! And now, in another part of the brain, also programmed by Nature, fantasies about children are already appearing. All thoughts of a woman are switched to children. Undershirts, nappies, baby booties, krovatochki, etc.

Of all the ways of life, only the Muslim is on the right path. And this is quite obvious from the fact that Muslims inevitably populate all countries and grow in numbers. Only among Muslims does a woman take the place allotted to her by Nature: pregnancy.

And not looking for a big penis, debauchery and looking for where to get an abortion.

Conclusions. Modern Christian civilization with regard to the freedom of women, matriarchy and feminism is on the wrong path. On a deadly path. This disfigures natural natural instincts and leads to degeneration, extinction and death of peoples. Women start chasing mirages. They begin to look for men capable of frequent and prolonged intercourse, with hefty members. This is facilitated by the porn-video industry and ill-conceived propaganda in the media of the "civilian lifestyle". A woman is driving, a woman is a boss, a woman is a scientist, a woman is at a computer. Women go into debauchery, all kinds of pickups and prostitution. But at the same time they achieve nothing, except for the perversion of their natural purpose. And the most offensive thing is that in the conditions of civilization and feminism, women by their nature are the most passionate, the most perfect, the most beautiful women who are placed in the conditions of the impossibility of getting pregnant and giving birth.

28.08.2017.

Optional. An invention that will be useful to old people.

2019.

I am 68, I take about 10 types of pills every day.

- 1) Pressure (morning - evening)
- 2) Coated aspirin before bedtime (for stroke)
- 3) From seizures
- 4) From edema
- 5) From nausea and dizziness (sometimes)
- 6) From pain in the liver
- 7) Vitamins for the eyes
- 8) vitamins for nerves
- 9) For cerebral vessels during the day

What pills for what I do not remember. I just automatically accept. Some once a day and some 4 times a day.

All tablets are usually in boxes. Like that:

And in the box itself, the tablets are enclosed in plastic plates, from which the tablet must be squeezed out. This is not an easy matter. The plate with pills must be held in a certain way, clearly and firmly so that it does not fly off to the floor. This requires a habit and every time the same orientation of the plate. To use the motor memory of the fingers. Some miner or blacksmith with thick fingers, they won't even be able to squeeze this pill out properly without dropping it on the floor.

In order for the orientation of the plate to be the same each time, it is necessary that the box with the plates itself be oriented in the same way each time. That is, the entire procedure for removing the tablets should be the same every time, as usual, with the motor skills of the fingers.

But traditional everyday idiocy has penetrated into this sphere as well. Some crooks from medicine began to make the same inscriptions at the top and bottom of the box. And above it is written "Noshpa", and below it is written in the same way "Noshpa". Everything is the same, you cannot tell. (I myself do not use "Noshpu", the picture is for example). Well, that's how the idiot decided - the manufacturer of the boxes. And now, when you want to get the pill with the usual movements, you will never guess where the box is up and where is the bottom. This means that in 50% of cases, the records in the box will be oriented inconveniently for you. We'll have to turn. This is stressful and unpleasant. A trifle, but not pleasant.

What if the inscriptions on the box and the top and bottom are the same? Signing where is top and where is bottom is also annoying. It is necessary for this to specially hold a pen or pencil. And that in itself is annoying. But sometimes the room is dark and you can't tell with your eyes. What label to come up with for the boxes, so that you know exactly how the tablets lie inside and which side to open the box from?

I thought for a very long time. I even wrote a letter to the Minister of Health Skvortsova so that the inscriptions on the top and bottom of the box would not be the same. Found a special site with letters for Skvortsova. Wrote. I compared this to making symmetrical cars that have the same front and back. And when you come up, you don't know which door to open if the windows are tinted. Only I was out of luck. They answered me in a rude form that this site no longer works and that I would not write there anymore. It's Russia.

And then one day, once again experiencing discomfort from determining where is the top, where is the bottom, where is the right, where is the left boxes, I figured out what to do. Without using a pencil, I now always clearly know where the box is top-bottom, left-right, and even in the dark I can easily remove the plates and squeeze out the tablets. I wanted to patent my invention. But I changed my mind. All the same, everyone will pirate my invention and no dividends.)))

The answer.

When I close the pill box, not all of the tabs are folded. I leave one tongue protruding. And according to it, I determine exactly which side to open next time:

Brilliant?

Preliminary. Biology about the brain.

Primate Brain Evolution

Starting from a certain moment, the great apes broke away from monkeys and from the entire animal world so much that the rest of the animal world ceased to be a competitor for humans. Why did not the evolution of primates stop, for example, at the level of today's great apes? On the level of gorillas, chimpanzees and orangutans? Why did you go to the mind? Or is it just filling in the existing “smart ecological niche”? Or is our current mind just the beginning of evolution towards even higher forms of mind?

In a nutshell, this question can be answered as follows. Both herbivorous mammals and carnivores have evolved on trees. They evolved together. Moreover. They evolved in such a way that from time to time there were crosses between them. Of course, not out of love, but out of violence. But the hybrids also lived and also crossed in the herd. Therefore, the whole process of interaction of human ape ancestors was very vague and ambiguous. But one way or another, and evolution on trees turned out to be much faster

than on earth. Therefore, monkeys were able to break away from terrestrial animals in evolution. Mainly due to the growth of the brain and its functionality and differentiation. And when conditions changed, when a herd of monkeys lost their trees, they were able to survive on earth. And then they evolved into a man. The transition from trees to land has also contributed to evolution.

Where does the mind begin?

Here is a lizard throws off its tail when it is caught. Then the tail grows back. This is a trick given by Nature. This is very tricky. But is the mind present here? - Apparently not. That is, there is cunning, but there is no mind.

Here are the horns of the bulls. Also cleverly thought up. But by whom? - Nature again. And this does not add intelligence to the bulls.

When does His Majesty Mind begin? In our opinion, the mind is the ability to simulate a situation in the brain and direct events in the direction necessary for an individual. It is to simulate and it is in the brain. If football is not just a canopy on the penalty area. The mind in football is a sighted pass, a wall game, a combination or an aimed shot. The mind in football is sweeping aside little promising continuations, such as jerking along the edge and then hanging on the penalty area. This has never been successful, but nevertheless, Russian footballers use this method all the time.

This is where it is worth telling about the mind in predators and the lack of mind in herbivores.

Let's take a closer look at how the predator behaves and how the herbivore behaves. What the predator does. 1) He sneaks up to be unnoticed, in dense grass or bushes. 2) He sneaks up on the leeward side to prevent the victim from smelling. 3) Predators understand that hunting in a pack is more effective. Therefore, they unite in flocks and act according to some cunning program. They drive the victim in a circle and change during the chase. They make ambushes in those places where the victim will try to turn. In order to either scare away the victim, or finish it off. What

are all these predators' tricks talking about? They say that predators use elements of the mind during the hunt. Predators need reason. They need him by nature, by biology itself. They need it as part of their body. Predators forever bearers of reason.

Now let's see how herbivores behave. 1) They must have good eyesight in order to detect a predator from afar. They must have good hearing and smell. 2) They must have horns if predators surround. 3) They must run fast. All of these elements refer to the physical indicators of the body. And to a very small extent are associated with the mind. The herbivore's mind is not particularly needed in terms of protection from predators. Herbivores need status in their herd, some fighting elements to fight for females and territory, for a safe place in the center of the herd. But these are also elements of the physics of the body.

Thus, we draw a conclusion. The division into carnivores and herbivores creates directions for the evolution of the mind and the evolution of the perfection of the body. These are very important and promising interconnected categories, which in the future bring the animal world to Homo sapiens.

A curious law of the wild world. If we calculate the weight of all predators and the weight of all herbivores, and follow their ratio over many years, then we will find the constancy of their ratio. The weight of all carnivores is on the order of fractions of a percent of the weight of all herbivores. Nobody measured exactly. But the main thing is that this ratio is constant. Because all the excess weight of herbivores must be eaten away. This is Lomonosov's law for biology.

The mind of monkeys.

A flock of mid-level monkeys contained few "geniuses" (with hybrid genetics). And such ingenious monkeys did not fail to invent the first steps towards Man. Namely.

1) We learned to go down to the ground and support the Fire and taught this flock. We learned how to use fire to protect against predators and taught this flock. Further, the fire began to be used

for war with other monkey packs, more "dumb" and especially those in which there were no geniuses. This is how the accumulation of knowledge went, but at the same time - the irreversible movement of precisely these flocks or even this one flock with "geniuses" towards evolution towards man.

2) We learned how to fry meat on fire, which facilitated digestion and freed up a resource for reproduction and victories over competitors. Although at the same time digestion degraded.

3) Learned to throw a stone at animals or rivals. We got hold of a sharpened stick.

4) After mastering the listed adaptation moments, the packs with geniuses descended to earth and adapted to earthly life. They mastered the caves and learned how to build a kind of den for shelter and residence.

5) The defect of "geniuses" in the narrowness of their personality, because of which they are not able to restrain the natural aggressiveness of their relatives, in connection with which envious people always hate them and want to kill them. But only those flocks in which some kind of brake on such desires worked, or geniuses could find ways to deal with individuals of a high hierarchy, only in such flocks were geniuses preserved and the flock continued to evolve. Where geniuses were killed, the whole flock later perished there.

6) It cannot be argued that the entire evolution of prehumans was easy and beautiful. All individuals are genetically mixed. A progressive genome can be mixed with a backward one, and the whole progressive movement of evolution occurs statistically, very unevenly and very randomly.

7) This phenomenon of genius directed evolution along the path of ... degradation of the body. But at the same time - along the path of development of the size and complexity of the brain. Genius prehumans could occupy different places in the pack. But all these places were protected by some kind of rules, because a defenseless genius aroused instinctive hatred and could be killed. That is, a genius could walk for a long time in inferior roles from

childhood. But once the genius worked and he either became the leader, or invented something and thus won the favor of the pack. In any case, after that, he got access to reproduction, and it was with the best beauties and clever girls. Therefore, the evolution went towards an increase in the brain and its complication. But all inventions were aimed at making life easier, and, consequently, to the degradation of the body. And anthropoids have lost the ability to eat raw meat or tree leaves or plant roots. And also drink raw water. And they could hardly survive outside the pack.

The process of evolution of geniuses is actively going on to this day. They have done a tremendous job of cutting through their ecological niche. Nothing shone for them in a primitive, uncivilized human society.

- They used their musical abilities, which are also increased due to the additional resources of the brain. These abilities allow you to guess the mood and desire of the interlocutors by the tone of their voice. And also to distinguish the male voice from the female.

- Came up with letters to represent sounds. They created writing. This has benefited the community. It was possible to leave commemorative signs and messages. And this allowed the hybrids to gain a foothold in society.

- With the help of writing, they collected various fairy tales, they were and were not, and they created the Bible. We are sure that the word Bible comes from the word Byvaliya (Russian - Experienced, and even closer to Ukrainian). These stories were read by normal people and they liked it. And this allowed geniuses to gain a foothold in society even better.

“They introduced into the books the concepts of ‘ law ’, ‘ all-seeing god ’, ‘ criminal responsibility ’, prohibitions on murder and so on. And this allowed the hybrids to gain a foothold in society even more.

- They introduced the concept of "education". Lower, middle and higher. The education system allows geniuses to adapt among ordinary people and feel fulfilled.

In parallel with all the above processes, the evolution of the hybrid genetics itself was going on. Now the hybrid part of genetics has a good memory for the study of sciences. And such an individual adapts well in society and in various activities.

Stages of the evolution of the mind.

There is an old tale invented or described by Gogol. - "Don't look!" - An inner voice says to the hero. - "And if you look - that's all, death."

And this is not a fairy tale, but rather a general and great law of Nature. The Law of the Evolution of the Brain from monkey to man and further is even higher. Every time, as soon as a representative of monkeys or prehumans or modern humans opens his eyes wider and is forced to see what he has not seen before, so immediately Her Majesty Evolution begins a new upward movement, making the current full-fledged individual an unexpectedly underdeveloped being and, as it were, only a stage on the way to a more highly developed being. Explanation of this statement - see further in order.

Once, millions of 200 years ago, mammals arose. They ran on the ground, functioned and evolved, adapted and improved. But one day one of them looked up and saw trees. Previously, everyone just stumbled upon trees and did not think about what it is. And then he thought: we must climb on it and try to live there. He didn't think too much, he just climbed in and began to live there and thereby saved himself. No, not like that. He just first lived among the jungle of fallen trees. By the way, this is a common way of survival and was used even by fish that lived in underwater thickets and piles of trunks, where they learned to move branches and algae with fins, and then, when the fins acquired strength and bone basis, they went out onto land.

So, this mammal first lived among the fallen trees, then learned to climb the branches. Then he dragged the female there. So the descendants of this individual died on earth and began to evolve

on the branches of trees. They did not yet know who they were evolving to. As it turned out - to the monkeys.

All major groups of mammals formed 70 million years ago. And including many types of monkeys.

At the same time, mammals were torn into two camps: living below and living above. And none of these camps became the Kings of all living things. At that stage it was not necessary. Each camp continued its evolution. Evolution is when in a permanent ecological niche. And since niches in Nature change all the time, continents move, connect and break apart, then there is no evolution, but filling of niches and flowing from one niche to another, with constant changes in the structure of organisms.

When a new ecological niche opens up in front of the growing tree of Life, then representatives of all species and genera rush to develop this niche. The niche is filled with all sorts of different rabble (like America in the 15-16th century), initially little adapted to life in this niche. And after sufficient filling and mixing of it, evolution begins and the formation of "from what was" a new species intended for life in this particular ecological niche. This was the case with the development of trees 70 and more million years ago.

This was the case, and many times, during the reverse evolution from arboreal monkeys to terrestrial man. Many monkeys have tried (or were forced) to come down to earth and live there. Many of them have existed for a long time and evolved to humans. Among them are Neanderthals. But in the end, everyone died out, there was only one species of our ancestors. Which, however, before our very eyes, in real time, begins to branch into several different species. And it will certainly branch out. More on this below.

So, evolution from the emergence of mammals, then to the emergence of monkeys and further to the highest phase of evolution of monkeys before they descended to earth and became the ancestors of man - it took place according to the usual laws and without any peculiarities. The complexity of behavior in trees

and in a collective environment has led to a noticeable increase in complexity and enlargement of the brain. Stereo vision appeared, both eyes began to look strictly equally forward. This allows you to coordinate your movement along the branches of trees and the movement of an opponent or a hunting object. This allows you to estimate the distance "jump or not jump". Sound signaling and the related parts of the brain have developed significantly. The fingers of the extremities have developed. An omnivorous digestive apparatus developed.

Monkeys, the forerunners of man, have advanced significantly in evolution, overtaking many terrestrial species in their adaptive abilities. Up to this point, they acted within the framework of the laws set by Nature. But no one can predict what lies ahead for evolution. What opportunities open up at one stage or another. It would seem that some creatures achieve an advantage, get ahead. But suddenly some ancient gene defect appears, becomes significant in the changed conditions, and these creatures stop developing and later die out. And vice versa, others have the possibility of some kind of progressive molecular mutation, which gives a completely qualitatively new direction of development, such as flying birds. And they further evolve according to their new laws.

1) So, life on the branches of trees made the monkeys dexterous, made their hands dexterous, their vision became unidirectional and stereoscopic. Hearing too. Their behavior has become complex, hierarchical and collective. And the frontal - parietal lobes of the brain appeared, creating a sense of their own "I".

Two million years ago, in the most highly developed monkeys, with a brain of about 400 grams, due to collective behavior, lobes of the Personality arose and developed in the brain. They helped the individual to participate in hierarchical behavior, in the division of labor, and so on.

2) And as soon as the fronto-parietal lobes appeared and slightly developed, they immediately appeared like freaks: hybrids,

geniuses. And they dragged evolution forward at an accelerated pace.

3) The first thing that geniuses noticed is that the falling fruit hits painfully on the head. That is, a chain has been established: falling from above is painful. We tried to throw the fruit on top of the predator - indeed, the predator did not like it. So geniuses taught the whole flock of monkeys to scare away the predators roaming below and hunt them. But not all monkeys were able to learn this. And those that did not learn, they began to be considered fools. And later they were hit in the head by the leaders and geniuses sitting upstairs. This is how the first mini-step towards man was made: getting rid of the first fools. And now they are not just monkeys, but anthropomorphic monkeys, in short: anthropones. And the geniuses of the anthropones, along with the whole flock, became a little smarter. They have always existed this way: the smartest monkeys joined the caste of geniuses and passed the evolutionary test for survival in a new capacity.

4) Further, the anthropones, or rather their geniuses, learned how to make a type of nest in the trees. Maybe copied from birds. Weaved them from the branches. These nests were comfortable to sit and sleep on. However, the instinct of "falling in a dream" (so as not to fall from a tree at night) remained forever and passed even to modern man. We all shudder in a dream when we suddenly dream that we are falling.

Hands became skillful. Those who could not learn to make nests from geniuses, they gradually got in the head. The Anthropones gradually grew wiser. Their brains grew. Not in the literal sense, but promptly exterminated everyone who lagged behind in size and brain development. Then there was no pity, compassion and similar saliva. But the resource for brain growth on trees was becoming insufficient. Everything was determined by the size of the pelvic bones, they entailed an increase in the size of the entire anthropon, and the branches of the trees could not withstand such. The branching of evolution was approaching.

5) Once one of the geniuses figured out to use as a throwing weapon not a fruit, but a stone picked up on the ground. It turned out to be good too. So the flock learned to collect stones on the ground, and at the same time save fruits, use them for their intended purpose, for food.

6) Throwing stones and other objects could not but affect the internecine relations of anthropones. Items began to be used as weapons. Sticks, stones. Of course, everything was invented by geniuses. And one day large highly developed monkeys looked down from the trees and ... So these monkeys ended their life in the trees and gave rise to a new evolution. Evolution to man. Well, those who did not want to go down, they remained monkeys. And even of those who went down, not all became human, for example, gorillas. They stopped in development, relying only on their own strength. And maybe they are right, because people until now have been monstrously degraded, do not know how to digest raw food and drink water from the river, and have questioned millions of years of their evolution.

7) Of course, the transition to earthly life took place gradually. The Anthroponians had to come down to earth from time to time. There were forest fires. And once there was a genius who had already survived several forest fires, and in whose memory something was deposited. He noticed that if the fire does not spread, then one can warm up by the burning tree. And it protects against predators. And the combustion can be sustained by throwing sticks into the fire. And you can hold food on fire, which makes it tastier. So the fire was mastered. And those anthropones who did not like fire or were afraid of it gradually died out.

8) Having once adapted to live on earth, the anthropones removed the main barrier from the path: now their body could grow evolutionarily, and together with the body, the brain could grow.

There is a law of Nature: once it has arisen, a new organ cannot disappear when the situation changes. He just finds himself a new use. This also applies to the brain. Having once grown and

become more complex, the brain cannot degrade. He just finds new uses for himself.

This is how the terrestrial evolution of the anthropones began. Geniuses came up with more and more new tools of labor, hunting, mastered more and more technologies. We can say that the Skillful Preman has appeared. Demands on individuals grew and those who did not meet these requirements were gradually but steadily exterminated. Yes, elementary, in fights for a female. Or, if you like, for a woman. Although no, this is where the watershed lies: a woman, by definition, is a person who is not fought for. She just chooses herself. And if they are still fighting, then this is still a female. Although this statement can be challenged. Well, if they fight, and she stands there and then and waits to see who will win - so this is definitely a female, not a woman.

9) Further, Letters, Numbers, Text, text carriers, paper, ink, etc. were invented. All this required an ever-increasing level of mind. There was a selection. The volume of the brain grew, memory and other abilities of the brain grew. Do you see a lot of drunken men now? - These are just those who have not found a use for themselves, have not found themselves, have not been able to adapt in this turbulent, increasingly complicated life. These are the ones who do not accept this new life. And do you see smart-ass Caucasians and Chinese people in the markets who profit from the trade? - This is the same more progressive layer that will replace the fools. Push. Drinking and degrading are hybrids, Finno-Ugric. They understand their degeneration and their inferiority. They got alcohol addiction from their narrow-eyed ancestors. And the pure nations of the Caucasians and the Chinese multiply successfully.

Until the last few millennia, natural selection in mankind followed the simplest and most cruel laws of nature. The less fit were destroyed by the conquerors. True, Nature often softens the consequences of natural selection. So, in deer, the male - the winner gets the female (or several females). However, the loser also has a chance. And when the winner loses vigilance, then the loser also gains access to the female. And taking into account the

fact that in such a situation the level of adrenaline is very high, the sperm of the defeated are more mobile and faster, and it is they who fertilize the female in this situation. This is especially clearly seen in people: a woman often becomes pregnant from her lover, who came to her even a few hours later than her intercourse with her husband.

The mitigation of the consequences of natural selection in people is also manifested in the fact that the winners willingly impregnate the women of the losing tribe and thereby prevent the genetics of the losing people from disappearing. So, for example, it happened in Latin America, where the winners mingled with the losers and gave rise to the new peoples of Brazil, Argentina and others. Although such a mixture is sadly numerous deformities in distant generations.

On the path of evolution to a truly intelligent being, man consistently discovers more and more facets of Nature. Once, picking up a stone and throwing it at a predator (for self-defense) or at game (when hunting), the monkey embarked on the path of evolution towards man. Of course, the first to do this were the geniuses-hybrids.

Further, there was the development of more and more natural phenomena; invention of more and more new objects of labor, hunting, everyday life; mastering more and more new technologies. Among the phenomena: fire, caves. Among the items: a spear, a bow - arrows, a stone ax, metal objects. Among the technologies: smelting metals, building a dwelling, etc.

With each new step in the assimilation of Nature, tension arose in the brains of prehumans. Because it was not easy to master everything new. And each time the gaze of the dissatisfied turned to those who invented these innovations. And then either - or. When the conservative forces won, evolution stopped. When geniuses won out, inequality was consolidated and evolution continued.

The complexity of the task and the number of cells.

The phenomenon of the mind consists in modeling two situations in the brain: the initial situation and the desired = final situation. With the subsequent search for a sequence of actions leading to a change in the initial situation in the direction of the desired situation. This sequence of actions can also consist of many intermediate situations. Thus, the phenomenon of the mind consists in the involvement of a number of brain cells to simulate situations. The more difficult the task is given to the primate, the more brain cells must be involved in the solution. You can't decide otherwise. Monkeys are able to solve simple tasks (such as knocking down a fruit with a stick), therefore they have some intelligence.

The more brain cells need to be involved in solving the problem and in modeling the situation, the longer it will take for this, because the cells are involved sequentially if there was no preliminary training. The involvement of cells occurs by playing in the brain similar situations, related tasks, etc.

An elementary experiment is known. The athlete was asked simple tasks during moments of rest and in moments of intense stress. For example, a weightlifter in moments of relaxation and in the moment of holding the bar over his head. The result was expected. At the moment of relaxation, the athlete copes with the tasks pretty well, just like any normal person. But at the moment of stress, the athlete is not able to solve the simplest problems. Why? The answer is simple. At the moment of tension, all the athlete's brain cells are connected to one main task: overcoming a given load, obstacles, coordinating all the muscles of the body and maintaining the exact position of the body in space. A millimeter to the right - a millimeter to the left and that's it, there won't be a record. This is especially important in weightlifting, high jump and pole vaulting. And it is very difficult for him to isolate even a few brain cells for solving some side problem. And during moments of rest, the athlete easily connects the required number of brain cells to simulate any feasible task.

Stanislaw Lem has a science fiction novel on this topic about the civilization of insect robots. Each such insect was very primitive and incapable of solving even the simplest problem. But they could exchange information, interact. And if there were several hundred of them together, then such small groups were already able to solve some problems. Gathering in huge flocks, these insects solved the most difficult tasks that human cosmonauts - conquerors put before them.

There is information about the termite experiment. In a closed space (which has everything necessary for the life of the species), a small number of termites are placed. Insects run stupidly on the surface with no signs of organized activity. The termite mound is not able to survive. He's dead in perspective.

The experimenters are gradually increasing the number of insects. Nothing in the group's behavior changes. And only after reaching a certain "critical number of population" a sharp metamorphosis in behavior occurs - an organized construction of a termite mound begins and one of the females begins to mutate and turn into a "queen", a procreant. Each insect acts like a note. The termite mound "comes to life".

The essence of this phenomenon is that only by using a sufficient number of elements (termite brain cells) can the situation be simulated. In the case of termites, when there are enough of them, all their vital activity and their future dwelling are modeled, which is then built. Figuratively speaking, with the help of termites, as with the help of pixels, the whole picture of the termite mound is drawn. And the termite on which the "queen" was painted, and he begins to turn into a queen. This experiment proves that termites and all collective insects have a molecular program of life.

A similar situation happens with Russian guys. Here is one guy stupidly loitering down the street. Another one has joined, but nothing has changed. And only when the third one joins, their eyes light up, the movements take on meaning and the idea immediately arises: to run to the stall for a bottle.

Has anyone thought why the bull cannot effectively resist the lion? It seems that the bull has no less brains, and no less intelligence, and horns, and dexterity? - The answer is this. This is the distribution of roles. This is the will of Nature, the will of Evolution. And this is the distribution of brains. In a lion, all brain resources are used for a very simple action, for killing. He is accurate and confident, although absolutely primitive! Grab the throat and strangle. Everything! But in a bull, only 5-10 percent of the resources, brain cells, are involved in protection. The rest of the brain is involved in complex relationships in the herd, in finding good and varied food (grass), in eating it, and in its subsequent long (chemically and technologically very difficult) digestion (this is grass, not meat!). And he can't recruit more brain cells like that quickly. And as a result, in a fight with a lion, the bull he only waves his horns stupidly and cannot hit the lion. The bull is not ready for this fight! He cannot concentrate all his intellect on defense. And why should he concentrate? He must honestly die and become meat if he is old or sick. Indeed, in the event of his confident victory, the lions will die out, and after that - from diseases and degradation - and all the bulls ... Although as a person, the bull is certainly much more complex and interesting than a sleeping lion for days. Who knows nothing in this life except how to choke his victims by the throats. And the most offensive thing in this story is that Leo is recognized as the King of beasts. Whoever knows how to choke by the throats best of all and does not know how to do anything else is the Tsar! As we know this from history ...

In primates (and in evolutionarily less taller animals) there is a division of the brain into lobes, there are convolutions, there is a functional division between the convolutions. And in each type of functioning, the individual who has a large corresponding cerebral lobe, a greater number of brain cells involved in this functioning feels more confident.

Someone on the Internet doubted the veracity of the stated thesis, they say bulls are not so stupid. Then answer: why do

bullfighters so easily tame bulls? And let them try to tame the lion in the same way?! Even with a sharp peak! A?! Weak to try?

Few would suggest that completely analogous phenomena occur in human society. There are many people who lead difficult lives. And their brain cells are distributed in pieces, more precisely - in small branches for various household, social, professional, educational, medical, hygienic and other tasks. In short, for survival. Let's call these people labor. Or by those who know food prices. And there are so many of these tasks that the "pieces - twigs" are very small. Therefore, it is so difficult for working people to survive in this life. And there are few people who lead a primitive life, who have a poor personality and a range of interests. But they have brain cells, resource cells, for each unit of this primitive behavior, they are mainly involved in the task of taking away part of the property from working people. Moreover, either by law (these are the upper strata of society), or by breaking the law (this is a crime). And they solve all household and other tasks for money, hiring maids, cleaners, security guards, and so on.

Differences between the brain and thinking

Should you devote so much to student achievement? Not all subjects are equally loved and interesting. For example, I let all the uninteresting subjects on my side, in particular social sciences. Or a foreign language. It's a mockery to cram English words. And besides, is the ability to absorb other people's information the most important thing? I think the ability to generate your information is much more important. Then one lady began to grovel that she was a good student, with honors, and therefore, as a moderator, she has the moral right to decide who to ban and whom to pardon. Well, you studied well. And what have you become? And you have become a trash, an upstart, a litter for the authorities, who likes to delete comments in large quantities, and which everyone hates. She held contests for the best blogger five years ago, and won everything at the expense of her 100 clones.

Plus herself. But only this did not save, people saw through, united, and her victories ended. And with that, the contests stopped. And if she studied badly, then maybe she would become a man.

Here is a sound recording or video recording. It can be analog (on magnetic tape) or digital (in computers, on the network). They seem to give the same result, music or video. But a lot can be done with digital recording. It can be embedded in various programs, mixing, editing, etc. Records "in digital" are more perfect. A similar comparison can be made with human thinking, it can also be "analog" and "digital". Analog thinking is fragmented and lacks consistency. Lack of communication between different sites of information. Fragments of analogue thinking cannot fit together. They record each piece by itself. This comparison makes sense: analog thinking is a warehouse of logs and boards. In people with analog thinking, lies are constant and commonplace. Because in their statements they rely only on one, the nearest log in the building materials warehouse. They lie as they breathe and do not blush when caught. They consider it natural, they say everyone lies. Digital thinking is characterized by textual, digital content, principles of life and behavior. Each new information is built into the general system of thinking. Digital thinking is not a warehouse for building materials, but a constructed building. A person who thinks "in numbers" in his statements does not rely on one log or board, but on the entire intellectual building built. So, our today's president is a classic of analog thinking. Which is disguised as digital by means of a purchased dissertation (by the way, for my daughter too). He promised not to raise the retirement age - that's one thing. Raised the retirement age is not related to the first event. He annually speaks about gasoline prices and nothing is improving. He lies every year that the salary is going up. He himself does not understand why one should believe him, he only asks to "treat with understanding." Our president is not friendly with a computer, not friendly with texts, not friendly with the Internet,

not friendly with logic. This is the level of a person who lived 150 thousand years ago. Our president is not a song, but only a bank of sounds.

Human memory is chemical in nature. It looks like limescale in a teapot. Only this scale is deposited on the walls of cerebral vessels and cells. It is irreversible. Not to be confused with plaque cholesterol. With age, memory becomes clogged. Therefore, people with a good memory in their youth quickly lose the ability to think and think by the age of 40-50. Don't waste your memory on useless information, fiction, fairy tales. A person is not able to forget completely. The human brain is incapable of rebooting. By the age of 50, you will have porridge in your head. It is better to read serious authors: scientists, philosophers.

Convenient comparison. People-cars and people-tractors. Tractors always need aggressiveness, fight, tanks, shooting. And cars I live easily and quickly. From there comes the phrase "I don't catch up with something".

Mosaicity of the brain.

This mosaic of all tissues also exists in the brain. Moreover, since the brain in the process of growth from the embryo grows from a certain center, it also represents, as it were, two mutually germinated and intergrown tree branches growing from one center. And on the cut, you can see the mosaic. Both branches of the brain are connected to each other by many synapses. Information about the two intergrowing branches has nothing to do with the division of the brain into hemispheres. The hemispheres are also branches of the brain, but not intergrowth, but just slightly contacting. This is a separate topic and is not touched upon here, and it practically does not affect our presentation.

Illustrations of the differences in the structure of the brain.

To illustrate the difference in the structure of the brain among pure peoples, let us use a comparison of hairstyles among women. As you know, the human brain is built according to the patterns set by their chromosomes. A person has two sets of chromosomes (from mother and father). In pure representatives of peoples, chromosomes have a very narrow scatter in parameters. And they build the brain structure very close to the one planned by Nature for a given people. This is illustrated by the top row of women's hairstyles.

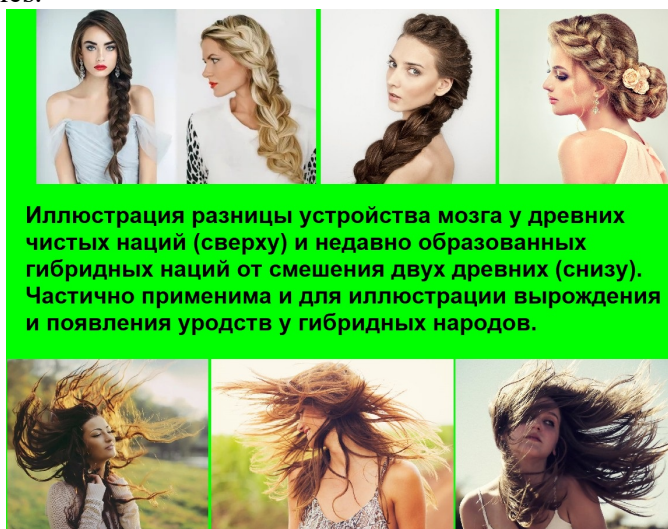

Figure 10.

If a hybrid happens from very distant peoples, such as a hybrid of Europeans with Mongoloids or Slavs with Chechens, then two genetic programs collide, which, in principle, build brains similar in architecture and structure. However, at the micro level, these programs do not fit together, and therefore, at the micro level, the resulting structure of the brain is illustrated by the bottom row of women's hairstyles. This is about the physical architecture of the brain. At the macro level, this is not noticeable in any way; anatomically, the brain of a pure Slav and a Slav-Yakut hybrid look the same. However, the study of the cellular microstructure,

the structure of synapses between cells, will undoubtedly reveal the difference.

How the differences in the microstructure of the brain of pure lines and hybrids are manifested in behavior. Let's use some of the results of the science of topology. This science makes it very easy to illustrate often complex and confusing situations.

Example 1. Here are topologically identical figures:

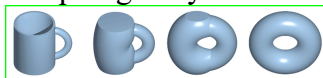

Figure 11. Taken from the free internet.

Example 2. And here are topologically different figures:

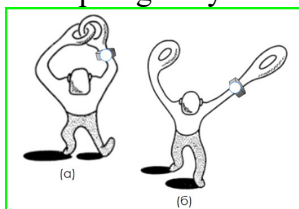

Figure 12. Taken from the free internet.

Like all organs, the human brain is represented by two intergrowing trees, each built with its own set of chromosomes. These trees are fused, stuck together, physically inseparable. However, they can be described topologically at an understandable level. This is how the human brain of a pure nation looks topologically.

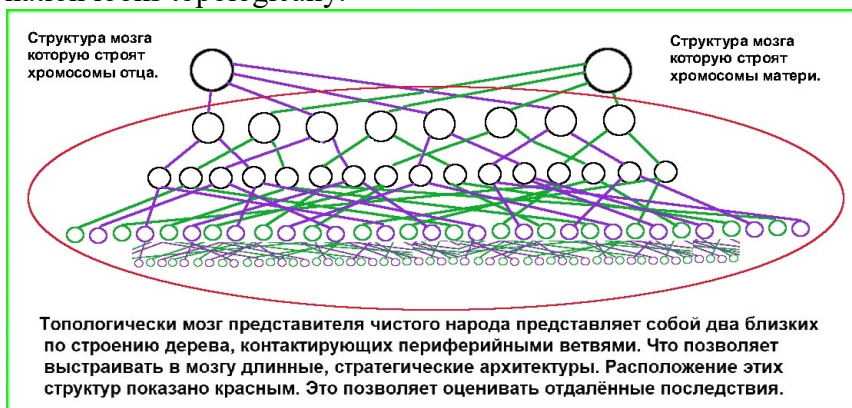

Figure 13.

With such a configuration of the brain, long chains of events can be located in it. Long chains of consequences from an event. And also, such a configuration allows you to control yourself and your emotions, not to cry out at the slightest out of control of the interlocutor.

And this is what the brain of a long-range hybrid looks like.

Figure 14.

As can be seen from the second figure, it characterizes the mental activity of our president in the best way. Like a wide broom, he sweeps out a lot of interests: hockey, and hang-gliding, and tiger breeding, and fishing, and picking mushrooms, and diving, and flying in an airplane, and a purchased dissertation, and taking care of several families and children, and playing the piano, and the creation of the "EdRo" party, and holding ostentatious pseudo-scientific and pseudo-economic conferences, and holding unnecessary doping olympiads and championships in the country, and squeezing out territories, and holding ostentatious press conferences instead of a serious report on what has been done for a year of work and spent budget money. But the long-term consequences of his actions cannot be located in this brain. For him, tigers were raised and released into the wild, and this is where the plot ends. Further, he is not interested or concerned. And that these tigers have already lifted up two citizens of Russia, and devoured all the goats from the Chinese on the other side,

does not bother him. And what other animals and people these tigers will eat out on this shore, it also does not concern him. In the same way, impulsively and swooped he does all the other things. Here he jumped, annexed someone else's territory. And what will happen next, how the world community will react, what the sanctions will be, who will pay for it, this does not fit in his brain and is perceived as a completely separate song. And he is also not responsible for the actions of the EdRo party he created, and this does not concern him. And he is not responsible for the murder of oppositionists either. It's not his fault. It's just that the brain is like that.

In addition, such and similar people every time break into a scream when the interlocutor has a complex, incomprehensible behavior. They are not able to understand complex behavior, because their thinking (according to the picture) ends at the third step. And you can never explain to them that they are wrong.

There are personal observations of the migrated Yakuto-Slavic hybrids. They have monstrous brain deformities. Monstrous chromosome mismatch. And monstrous inconsistencies in the brain. To such an extent that at times the speech apparatus ceases to function. And they adapt to repeat what you said. They just repeat your words, but with an intonation as if they just said it. Or they repeat what someone has said on this topic. I talked to one like that. - Well, how are you, Seryoga, is everything all right? "It's okay," he replies like an echo. - Not married? - Not married. - And I suppose you have illegitimate children? - There are illegitimate children. (Although it is obvious that they are not there). And further in the same spirit.

And the last thing. A note on the sport of power martial arts. Our organisms are apparatuses monstrously complex at the molecular level. There are trillions of trillions of cells in them, and each cell is trillions of atoms, molecules, chemical processes. We've evolved over three billion years. And such monstrously complex machines force them to beat each other with their fists in order to determine the winner. This is madness. It's like taking

two smartphones and hammering at each other, which one breaks faster. Only trillions of times more difficult.

Brain rising from all fours.

How ridiculous and awkward were the first monkeys who stood on their hind legs ... How they were not adapted to this ... How many mistakes they made ... How stupid they looked ... How weak and despised by the monkeys that remained in the trees ... But they gave the vector of evolution.

In the same way, half-blood geniuses are now setting the vector of evolution in humanity. Their brains seem to stand on their hind legs. This is an analogy, not quite the same in terms of the number of legs and arms.

The lobes of the personality and their branches are like 4 legs of a primitive brain. The resources of the brain are like its hands, there are also four of them. And while a person relies in his life on the whole personality, on both lobes and on both branches of the personality, the "hands" of his brain are attached low and poorly reach objects of interest. Despite the fact that there are four of them. But now the brain stands on two legs (only one branch of the personality with two of its lobes). And then the released brain resources, with some skill, lengthen the attached brain resources! That is, the brain loses two legs, then loses two arms (!), But these lost arms attach to the remaining arms and lengthen them twice!

And how vulnerable this brain is now. How helpless these creatures are, how weak they are. But this is a vector. Their brains settled on their hind limbs. They have freed up the resources of the brain, lengthened the "arms" of this brain. They can now much, much more than those who were left with their brains on all fours. These current beauties.

The monkeys made the fatal mistake of not killing or eating those defective relatives. Which they drove to the ground. And who later became people. And they became kings of all living things and monkeys too.

Why was this "extension" of the brain possible? - And this is the fruit of centuries of humiliated labor of primitive people who created sciences and a system of education. It was training, the absorption of numerous information that made it possible to relieve the pressure on the "legs" of the brain, on its personality. The training avoided the numerous behavioral improvisations required in the wild. The training taught people how to behave with each other.

When a person ran on two limbs, a huge resource was freed up for restructuring the brain. Plus, at this time, two chromosomes have grown together in human ancestors, which recorded the erectness of a person. The second human chromosome is the result of the fusion of two monkey chromosomes. Moreover, this is confirmed by various types of monkeys. As we have already expressed (hypothesis), it is the upper and lower halves of the body that are fixed into one whole with control from one center. Although it is possible that something happened with the brain.

The logic here is simple: a person stood on two legs, vertically. And at the same time, two chromosomes have grown together. Obviously, this is interconnected. But how? This question is not yet clear.

As you can see from the previous chapters, almost all chromosome defects lead to microcephaly. This indicates that no matter what tissue the chromosome builds, it necessarily builds a communication line with the center. And it certainly affects the parameters of this center.

One popular bike from the USSR era.

As it is already understood all over the world today, the main theses of Marx-Lenin deny evolution and Darwin's theory. And everything rests on the economy. They say the bourgeois is not smart at all, but simply greedy and mean. And he got rich only from this. And if we take it away from him and distribute it to everyone, then we will begin to live well. They took away, distributed, drove into collective farms, but did not begin to live

well. Still, it turned out that the bourgeois are not stupid people. And the poor are also greedy and mean.

But as long as the theory of Marx-Lenin was not exposed, in the theoretical circles of the CPSU and in higher education there was such a tale. She was intensively instilled in students. An experiment was allegedly done. After the first year in groups, as usual, students were divided into excellent, average and C grade students. And so the highest party minds allegedly took and reorganized the groups. Namely, all the excellent students were transferred to some groups, all middle peasants were transferred to other groups, and all C grade students were transferred to other groups. Allegedly with the aim of highlighting the most talented. And they waited another year. And what was the surprise of the highly-party advanced experimenters, when at the end of the year it was discovered that in all groups the average academic performance was approximately the same, and in each group there was again a division into excellent students, middle peasants and C-students! What's the conclusion? And the conclusion is the same that the theorists of the CPSU needed. They say there are no innate talents, but only being determines consciousness (according to Marx and Lenin). They say only mutual contacts and determine the hierarchy in the team, as well as all the abilities of individuals. Of course it was a lie. But this lie was the pinnacle of the ideology of the CPSU. And outstanding figures of capitalism (Bill Gates, Elon Musk and others) refute this lie.

Worse, it followed from this experiment that the distribution of excellent students, middle peasants, and C grade students follows some unknown laws. But in no way connected with natural talent. What are the laws? But there were such laws. The laws of authority. When Brezhnev died, then Andropov and Chernenko, the people began to say that now the most authoritative person in the CPSU is Gorbachev. And what kind of authority does he have? What is it based on? Nobody knew. And there were no competitions. Authority and that's it. Therefore, all the distribution of students after graduation from the institutes occurred absolutely

by chance. Mainly because of acquaintances, connections, relatives, social work, there was such a thing. And authority. And honest students went to Novosibirsk, Tomsk, to the periphery.

There was a joke about social work. They say they built a 4-storey house and forgot to make toilets. How to be? We gave the question to the party committee. The party committee decided. Give the 1st floor to the kindergarten. They go to pots, no toilets are needed. Give the 2nd floor to public workers, they have no time to go to the toilets. The 3rd floor will be given to students, they have nothing to go to the toilets with. And give the 4th floor to the director. He doesn't care who to go to.)))

I remember that I believed this story about the experiment with students, and she lived with me for a long time, I retell it, I was surprised myself, admired the wisdom of the party minds. And only in adulthood I realized that this is a lie. Lies rubbed into the people of the CPSU. Like the whole theory of Marx-Lenin. And yet there are innate mental abilities. There is an innate talent. There are natural inclinations. And if you bring together the excellent students, then this will be the best group in terms of academic performance. And if you bring together C-graders, then they will be C-graders. And this is perfectly visible on football teams of the Barcelona, Liverpool or Bayern class. Collected from the world's best players.

Thinking short and long.

Yes, there were good moments in the USSR. But here's what comes to mind. Bravado, martyrdom, contempt for reason. Example. It was good form to approach a scientific meeting about the number of digits for pi. And decisively say: why are you arguing here, doing garbage? Pi is equal to three. And then there was silence and thunderous applause. Delight. How he simply cut this Gordian knot.

This tone was set by Lenin, and then by Stalin and his government. This tone was set by Napoleon. "Let's join the battle, and we'll see." Here is something that agriculture resists, does not

want to hand over all the grain to the state, and then buy from it for food. Only 3 times more expensive. What to do? - And Ilimintarna! It is necessary to gather all the wealthy peasants, take everything away from them, and send them to Siberia, where the taiga is not mowed, for felling, for re-education.

This Bolshevik tone was continued by their followers. Khrushchev, Brezhnev. Nikita Sergeevich, how to feed the country? Ilimintarna! We plant corn, it is productive, we will feed everyone with corn. Leonid Ilyich, the scholarship for students is small, how to live? Ilimintarna! We will go to construction brigades. And there the bosses of those places where students go will cheat with salaries, with the development of funds, with postscripts, will receive kickbacks. And as a result, the earnings for completely mediocre work (I know, I have been to construction brigades many times) will be 5 times the size, and the chairman of the collective farm where the students worked will make himself a Volga. There is no benefit to the country. Only losses.

This bravado was brought from the north and east to Russia by the Huns, the Finno-Ugric. Ethnic bandits. They think in pictures and they have a picture in their minds: everything is illogical, I can easily cope with all the problems! No need for intelligence, mathematics, scientific training. Now I am imposing my homies, accomplices, relatives in high positions, and the economy will trample. A jerk will begin. Look how I myself: if I want, I will fly on a hang-glider. I want to dive into the sea and get a couple of ancient jugs. If I want to, I will raise tigers and breed them in the Far East. Let them eat goats from the population. And the dogs are being strangled. And then people (two people have already been killed). If I want to, I will brood in the steppes of Przewalski's horses, they are small, just like me. Let the people admire how easy it is for me. And what? No confirmation that I'm so smart? - Here is the dissertation. I gave only a billion for it. Dollars. To the rector of the institute. No confirmation that I'm so desperate? So easily blow up a couple of houses, and wage a successful war

against the Chechens. And why do the Slavs need them? - And to be silent, it is not your mind's business!

Figure 15.

For some time this was perceived as the norm, because it was post-war time. There was no time to think in the war. You start to think - they will be accused of cowardice and against the wall. Do not break away from the team. But now the war has passed, calmed down, ten years, twenty. Germany flooded up. What are we? And we all ferment, all the paradise on the red square, the victory is called.

Did the Americans staged a coup in Kiev? - Fine. Let's squeeze out the Crimea. Donbass reached for Crimea? - Donbass is a little bit odd to take. Fuck Donbass. We will help with echelons with food. We are overwhelmed with such good stuff.

Is there a little money from the sanctions? Ugh, or mint. Let's take from the old people let them survive as they want. Spent element. It will not be enough, so we will take away all the pensions. We are hussars, easily, playfully, without the use of higher mathematics, we solve all problems.

All this was presented to us, the Slavs, by the Finno-Ugric. They lived like this for all centuries, robbing the surrounding peoples. Historian Pyzhikov talks about the split in the Russian Church. How many Orthodox were there after the schism and how many

were Old Believers. Officially, Old Believers were 2%. Pyzhikov claims that there were more than 20% of them. We claim that there were more than 60% of them and that these are all Slavs. What was the faith of the Old Believers? We crossed ourselves with two fingers. But the Finno-Ugric, Great Russians, came and made them cross with three fingers. They simply imposed complete stupidity on the Slavs. But it is not stupidity itself that is important, but the process of imposition through repression and punishment is important. The process of submission to the will of the Finno-Ugric Slavic population is important.

The Logic of Reason and the Logic of the Macedonian.

The logic of the Macedonian is the logic of human hybrids, which cannot and do not want to evaluate the consequences of actions. Macedonian logic: cut the Gordian knot! This logic is very popular in the USSR and Russia. There is no need for delicate diplomatic negotiations. Don't wrinkle your mind. We must act impudently.

However, in this field, a verbal battle takes place between the Slavs and the Finno-Ugric. Finno-Ugric are simple and straightforward. And the Slavs are more subtle and cunning. And this is what happens on the battlefield.

Slavs	Finno-Ugric
- You are the boss - I am a fool, I am the boss - you are a fool.	They are always bosses.
- Fight and seek, find and hide.	Fight and seek, find and not give up!
The stupid penguin shyly hides, the smart one boldly gets it.	The stupid penguin timidly hides the fat body in the cliffs
- There are so many good girls, but they are drawn to the bad ones.	How many good girls, how many affectionate names ...
- Russian speech without swearing turns into a report.	

	- Only cowards pay off debts.
- Seeing you is one pleasure, not seeing you is another.	It's a pleasure to see you ...
- Girl, where did you buy such thin, crooked stockings?	Ay-yay-yay girl, where did she get such legs? ...
- Ivan Tsarevich rode for three days and three nights until the rope was taken away.	Ivan Tsarevich rode for three days and three nights ...
- I loved you, the trees were bent.	I loved you, love may still be ...
- Who served in the army does not laugh in the circus.	Those who served in the army received hardening, training ...
- Citizens are drivers! Beware of the places where children are popping up!	Citizens are drivers! Be carefull!...
Two deaths never happen, two lives too ...	Two deaths cannot happen, but one cannot be avoided!

Russians love to keep things simple. Their sayings are like understatements. They cannot formulate the entire length of the saying.

- Who did not have time, he was late.
- As soon as possible.
- Who got up earlier, that and slippers.
- Better sleep than not eat enough.
- It's funny for you, but for me to marry.
- Whoever stole the first is the author.

The phrase “hybrids” is always interrupted by the interjection “well”.

Samples of Finnish-Ugric sayings. They are eccentric in terms of coverage of options, but not far off in terms of miscalculation.

- No matter how much vodka you take, you still run twice.

- A joke repeated twice becomes clearer.
- No, I'm not sleeping, I just blink slowly.

Man is not a computer. He does not solve problems by simply enumerating options. The human brain works on a completely different principle. The human brain takes advantage of the complexity of its architecture and works on the chemical principle of memory layering.

Punctures of pure brains and hybrids are possible. A pure brain can calculate far, but generally miss an option. And the hybrid brain grasps more of the possible options, but calculates the options very close. In terms of the structure of the brain of hybrids, it is quite well described in the chapter on brain biology and illustrated in the figures.

With regard to politics, two situations are possible here. Or a supreme hybrid and he sees broadly, but not deeply (like Putin). Then he must surround himself with visionary sages of the Glazyev class. Or the supreme himself is a far-sighted sage. Then, in order not to miss the correct line of behavior from consideration, he must surround himself with hybrids with a broad outlook. In other words, the strategist must surround himself with tacticians, and the tactician must surround himself with strategists. However, most often the Supreme does not have any talents and surrounds himself with jesters and idiots of the Medvedev, Mutko or Khrushchev class.

The difference in thinking between pure peoples and distant hybrids. Please do not rush hastily to accuse the author of Nazism. The author sets out here important rational things that are necessary and useful to humanity in order to protect it from many mistakes. In particular, from a possible mass extinction.

Clean lines of peoples are distinguished by the fact that in the process of long-term cohabitation of people, some stabilization of both the appearance and character traits of the representatives of this people occurs. All significant deviations are naturally rejected. For example, in Russia there is a saying “husband and

wife are one Satan”. Or there is a well-known observation that a husband and wife are always alike. Just like the dogs are like their owners. And for many generations, clean lines have been created, for example, of Armenians or Latvians, or Chechens, who cannot be confused with anyone. Here they are, and in children they are highly likely to be reproduced both externally and internally. The external and internal appearance of clean lines depends on the living conditions, as well as on the initial genetic set. For example, the hard work of the Russian peasant led to the formation of a large, strong man, with simple thinking and simple needs. And the predatory life of some Caucasian peoples led to the creation of a small, bow-legged (just for riding), cunning, greedy, noisy, vicious man.

Distant hybrids mean hybrids between branches of human settlement that are strongly separated in time and space. Or in other words, human haplogroups strongly separated in time and space. For example, hybrids between haplogroups R1a and N, the time distance between which is about 40 thousand years of independent evolution.

How does the brain think. There is very little in common between the thinking of the brain and the computer. In a computer, a processor sequentially transforms one array of information into another at a tremendous speed in accordance with a given program. In the brain, no such transformations of arrays take place. The brain thinks exclusively by traces of chemical memory that remain in the brain after a person's presence at various events. Such traces can be not only visual images, but also sound, olfactory, tactile and imaginary ones too. A person can, in accordance with the task, recall some images and feelings from the past, compare them, find common ground in the content, find temporary intersections of events. This can also be done by some higher animals, monkeys, predators. But a person has the additional ability to express their memories in the form of words, texts. And thus share information with fellow tribesmen. Well, reading texts is also an event and it also leaves a chemical

memory about itself. And in the field of reading and transferring texts between people, sciences, journalism, as well as music, writing, poetry are born. And the person has advanced so much in this direction that the mentioned occupations are very serious spheres of social activity. Although they are strongly divorced from nature.

But one way or another, the basis of human thinking is the chemical traces of events. And for this reason, human thinking is very slow, not always adequate, often with errors. And the man is not especially to perform many functions that a computer performs in 1 second. For example, searching for the desired word in the text. Or translation of texts into different languages. Or face recognition. A person can quickly find a familiar face while looking at a stream of faces. But it will take a long time to remember where he met this person and what to call this person. And also with great difficulty (and great tricks) he will draw a composite of the criminal whom he saw. All this is due to the chemical nature of our memory. Which is subject to the daily layers of other prints from other events. And the further in time from the event, the more layers there are, and the more difficult it is to remember something.

Thus, the following important conclusion can be drawn. Human thinking is heavily dependent on the initial architecture of the brain. The more complex the architecture of the brain, the more complex its interlacing of synapses, the more complex it is imprinted images of events. The more subtle is a person's thinking. There is such a phenomenon: similar events or words. And in humans, they are often chemically imprinted as the same event. For example, from one friend, the words "elliptical orbit" were imprinted as "epileptic orbit." It's funny, but it often happens with all words and concepts. If the structure of the brain of this person was more complicated in this matter, then these words of course would be imprinted in his brain in different ways.

The architecture of the brain also leaves its mark on the spoken language. For example, many people have long phrases that don't

fit into their brain architecture. One of the hallmarks of short thinking is the inability to speak a long sentence. Usually such speakers are interrupted by the interjection "well". This is common in retarded schoolchildren. When, when telling a lesson, he often interrupts the story with the interjection "well". Like: Onegin, well, offended Lensky, well, and Lensky challenged him to a duel, well, and the duel took place, well, and Lensky missed, well, Onegin got ... This is popular with comedians, where they play the role of such a fool.

Broad but shallow Russian nature.

Oleg Tabakov's phrase on TV. The Russian soul is wide. We should narrow it down a little.

Somewhere above the forehead there are points, such initiative points. At night they sleep, and in the morning, waking up, they send impulses to the dominant center. They all want something these points. And depending on the satisfaction of those body functions that want these points, they stop wanting for some time. Then they turn on again. Etc.

These points make up the person's personality. From birth, they are quite simple in their desires. With age, these areas of the personality functionally grow, break up into small pieces. Some reflexes accumulate in each piece.

There are not enough brain resources to serve broad natures. Therefore, broad natures tend to subjugate other people. To crush them, make them work for themselves, use their brain resources. For other people to supply resources. To be prompted all the time (if I was mistaken - correct it!). Created all kinds of committees.

This is the basis of pack behavior, this is the basis of communism. Why did it collapse? - The power is packed with scoundrels. A nomenclature was created from stupid but very tough and powerful people, such as Yeltsin. We sorted it out. Transferred. Overdid it. And further. The second layer was packed with cunning people who understood that everything was based on

their prompts. And they stopped prompting. Let us recall these Soviet sayings "initiative is punishable" and so on.

All schema monks, hermits - they unconsciously strive to become saints. But this is very difficult. And often wishful thinking.

How Kasparov defeated Karpov. During the match, Karpov's personality was decaying due to tension, his two branches of personality lost their synchronization and unity of work. On the other hand, in Kasparov's case, all the resources of the brain condensed around one dominant branch of the personality. His basic personality grew stronger.

Because of their scattering, Russians evaluate others as a whole, in one, like a good person - a bad person. But in the West, they evaluate each other by their professional qualities.

A primordially Russian national occupation is to fence fences. And even a song: I am city gardens, but I amuse all the pegs ...

Truths roam the language. Devil = Two Wills. Two personalities.

What is lust for power?

April 27, 2017 7:32 am

This is what Archpriest Andrei Tkachev writes.

“Do not let my soul have lust, this hidden snake and idle talk,” wrote Pushkin, shifting the prayer of Ephraim the Syrian to verses.

Lust of love, hidden snake, what is it? This is the desire to command, the love of leadership, the desire to command. As in the fairy tale "About the Fisherman and the Fish", the old woman is an image of obsessive lust, one of the branches of pride. “And I don't like to be in command,” you say. (...) How can I check if I have the leadership or not? Very easy. A person who loves to teach someone when he is not asked to do so, a person who interferes in other people's affairs, on the basis of what he supposedly knows best, a person who prompts, gives advice to those who did not ask - this is a pure example of obsession with

curiosity. For example, when a mother-in-law tells her son-in-law how to live in the world, of course, she thinks that she knows better, she's a mother, and the son-in-law tells her to leave them alone, they will figure it out themselves, this is an example of pure love of command. When two people talk, solve some problem, and the third comes up to them, listens to them and says that everything is wrong and he will now tell them how to do everything, this is also pure lust. When you teach someone, and you are not asked to do so, then we are dealing with pure curiosity.

If you like to interfere in other people's affairs, talk and gossip about other people's activities, think about how he would have to act if I were in his place, and he is a fool who does not understand basic things when you teach those who are not for you subordinate, then you simply show the passion nesting in you to command, to dominate. It's all a hidden snake, a daughter of pride. It is present in a person and someday it will be necessary to do not only bodily affairs, but also the soul. Keep in mind that the prayer of Saint Ephraim presupposes a petition to God to take this spirit of dominion from us. If a person scolds the authorities, scolds violently, ardently, most likely, he is obsessed with the desire to rule, he is simply jealous. When a person scolds the rich, how much money they spend, this is definitely a money-lover, he says this not with a desire for justice, but out of a love of money.

Really interesting? This is what the ROC teaches us, in Lenin's opinion an accomplice of the exploiting class. Are you criticizing the authorities? - So you yourself want power. Criticizing the rich? - So you yourself want wealth. And here is what Putin teaches, in the same vein. Fighting corruption? - Just for the sake of their own PR!

But it seems that it is no coincidence that this topic arose in Russia. In a country ruled by pathological rulers. Here he has no education, he bought a dissertation, but he tries to give orders, hides smart people in prison. How can such a person be considered normal?

Analogies.

1. Computer analogies.

Actually, the way the brain works is radically different from the way a computer works. But we will digress from this.

Imagine a person as a kind of robot with a computer as a behavior control. This computer has all the "personal belongings": processor, hard drive, RAM, CD-Rom. The power of all these components is different for all people. And you can't say which components are better. With age, the operating system and many programs of behavior are developed. And here, for some reason, it turns out that these programs of behavior are different for people. And the operating systems are different. Why?

It turns out that with outwardly identical Winchesters (skulls), people are born with already divided hard drive space 1) Approximately 10% for the Operating System and Programs Serving Human 2) Approximately 90% for resources for executing programs and temporary files. And it turns out that from birth in computers of people this place is distributed in different ways. The difference between a simple computer and a genius is that a simple computer for the operating system, together with programs, has on average twice as much space as for a genius. But, accordingly, a little less space is allocated for resources and temporary files, by about 10%. Thus, in the process of development, a genius computer cannot grow significantly in its operating system. Also, it cannot grow in the number of programs. But in the depth of calculating the options, in the depth of immersion in any program, in the analysis of many options, where memory resources for temporary files are needed, it is significantly ahead of a simple computer in terms of one program.

2. Comparison of a common man and a genius with a book.

Another comprehensive comparison of common people with geniuses is as follows. Imagine that a person is a book consisting of a table of contents and the following text. Let's say that from birth a person is given 10 pages for a table of contents and 1000 pages for texts corresponding to this table of contents. Throughout life, a person gradually fills in both the table of contents and text pages. This is a model of a normal person. The table of contents is, as it were, a person's personality, the ability to present oneself in society.

The table of contents is not something written down once and for all. One thing in it is gradually forgotten along with the pages of text. At the same place, then something else is written, also with other pages of text. The person adapts to life and gradually revises his book accordingly.

The table of contents is compiled by a normal person according to the generally accepted model. Namely: the volume of the table of contents is sufficient to include indiscriminately all life situations accepted among ordinary people. This volume, 10 pages of the table of contents, on the one hand is enough for all situations, and on the other hand, there is practically no free space left for something extra ordinary.

Normal people meet and evaluate each other first by the table of contents, by the size and variety of their table of contents. And only much later, recognizing each other, do they discover the depth or superficiality of each other's knowledge, what is hidden behind their facade. What happens is what is formulated in the proverb: they are greeted by their clothes, and they are escorted by their minds.

Now let's imagine that a person is born with the same 1000 pages for the text, but with only 5 pages for the table of contents. Or, even worse, no table of contents at all. Consider a case with 5 pages for a table of contents.

Living in an environment of normal peers, such a person initially acts like everyone else, trying to get involved in all areas

of interaction, filling out his table of contents indiscriminately. But he soon discovers that he does not have enough space for his notes. For memorization. He lags behind in the field of contacts, the breadth of the circle of acquaintances, knowledge of the near and distant environment. He runs into peers who overtake him in early development. He starts thinking. And he instinctively begins to highlight something important in life, that you need to remember and something secondary, which is not necessary to remember, but how it will turn out. The main topics are entered on 1 page. On the second - less important, and so on. Thus, already by the age of majority, such a person sets priorities in life to a significant extent and does not waste himself on trifles.

Further, in adulthood, the “book” of such a person differs from the book of an ordinary person in that it has fewer table of contents pages, but the same number, on average, more text pages per heading. That is, such a person is more professional in his chosen field of activity than an ordinary person. He is not scattered about trifles. And he overtakes ordinary people in his chosen profession.

3. You and you.

That's where it comes from. You - this is said to a person whose both branches of the personality are powerful enough. You - when you feel that there are really two of them, two branches of the personality. And you - either to the young, or to the one-tree or even to the moron. And if you are young, these trees are still weak, then you say to you.

4. Conscience and shame. Someone else's pain.

The phenomenon of conscience is when half-persons, branches of a person's personality seem to consult with each other.

A person who has a conscience will automatically work out what is allowed and what is not. And the phrase of Christ - do not do with others what you do not want to be done with you - it is

inherent in people. But in religious scriptures, this is the replacement of textual rules for what is not inside you.

People with a conscience, they assume that everyone else is also with a conscience. And they believe, and at this time they are bred by geniuses.

Usury is a lack of conscience or a useful application of this lack. They shift the assessment of their actions to those around them. For which they then pay with pogroms and extermination. That is, all functions where two personality trees are consulted, they disappear from the usurers. And this is not only in the absence of conscience, but also in other phenomena.

1) Cruelty is the result of a lack of conscience, understanding of someone else's pain, advice with oneself.

2) This is where the biblical commandments come from - they replace the missing conscience. Do not steal, do not covet your neighbor's wife, do not kill, etc. are laws that correct the defects of lack of conscience.

5. Controlling the body of a common man and a genius.

There must be a colossal restructuring of geniuses because a single branch of personality cannot fully control the body. It is very difficult for her to control her body. The number of cells involved in management is 2 times less. And there is no feedback, hints, advice (from the second branch of the personality). That is, geniuses in terms of body control are not athletes. There are exceptions though. Not physically working. Which, by the way, is well hidden in a democracy behind the praise of all kinds of professions of actors, writers, managers and other little hands. And that is what they call work. We work 18 hours a day! And they themselves believe in this, in this fairy tale. And they would try to hammer the miners for 18 hours. They only need to walk and move their fingers. And like there on the computer, on the piano. And that's all. Here is their minus. This is a big disadvantage. And there is one more.

Examples of a lumpy personality: jokes, hits. Exactly so, under the guise of a higher degradation, erosion of the brain, its genetics. It spreads like a cancerous tumor. And then everything will collapse and humanity will remain at a wilder level.

6. Biology. Reproduction laws.

All defective ones prevail during reproduction. That is, their sperm move faster. And the second law of nature: the only way to get rid of the rapidly growing number of freaks is to fight, the natural selection of phenotypes.

In the wild, in every herd or flock, this is normal. There is a very small percentage of absolutely healthy animals. And quite a significant number of slightly defective. But which multiply faster. And therefore, lions or wolves hunting them - they unmistakably feel "by their gait" and gnaw as a rule the defective ones. As examiners, it is easy to identify truants and idlers. And just the quantum nature of the situation is that a lion cannot defeat an absolutely healthy animal. But he can defeat mutants one step below with some probability.

Those born defective are devoured in large quantities and only normal ones remain. Both among herbivores and among predators.

Law: Sperm carrying a defect move and fertilize faster. And only in the struggle of phenotypes should all defective and inferior ones be eliminated.

Consequence: in half-breeds, the predominantly defective half continues the genus. I have observed this myself, many times. Those men or women who risked marrying slightly defective subjects inevitably received a full program of defective children.

All genetics who interbreed with them, as a rule, are doomed to extinction. Defective genetics, on the other hand, flows from generation to generation, but always in a different configuration, with a different genetic half.

The defective always win in the desire to have children and in the number of children. And elimination and alignment occur already at the level of phenotypes.

The fight between sperm cells and the fight between phenotypes are two completely different battles. Just like a butterfly and a caterpillar, they fight differently at each stage. At each stage, the survival parameters are completely different. Hence the conclusion: the results of this struggle do not coincide. That is, the struggle of spermatozoa leads to one end result, and the struggle of phenotypes leads to another. But in general, everything is in equilibrium at some middle position. The struggle of sperm cells generates a huge number of defective phenotypes and a very small number of full-fledged ones.

At one time, after being distributed after the Moscow institute in one of the peripheral districts of Sergiev Posad, I was amazed at the abundance of the Finno-Ugric "blackness". This blackness is usually marginal, but arrogant and impudent. Such blackness was also found in the Lipetsk region, but in much smaller quantities. Its number is gradually decreasing, but a new one comes from the northern and eastern regions.

The theory that explains all politics.

People of the world, stand up for a minute! The theory that explains all politics. June 21, 2019, 13:46 © I present the found model that explains all the events of the 20th century, all tragedies and delusions. And he explains which path is correct for all states and Russia. This is a very important theory, so please be understanding.

Marx (with his comrades) has already tried to write a comprehensive theory of the development of mankind. I even built a model. He even formulated the main theses. But in practice, this theory brought a sea of blood to humanity and did not give the desired result. Capitalism triumphed. Technology and science won. Intellect has won. The American model won, we will not expound it here.

However, not all peoples and segments of the population were satisfied with the American model. And the not entirely communist model turned out to be the loser. A country was found, a people was found, and there were geniuses in this people who, at the level of intuition, at the level of manual control, without even fully realizing their actions, brought the country on the right path. This country is China. Few people today can tell the reason for China's success. What was done there. But we all see China's successes.

At the same time, since China itself has not fully understood the reason for its successes, there is still a threat of turning down the wrong path after Xi Jinping's departure. The threat of the death of the socialist model and the advent of wild capitalism on the globe remains.

I wanted to make a geometric model for my theory, but it is very time consuming, for several days, and can disrupt the whole train of thought. In short, in words, the model is as follows. Let's construct some surface, for example $Z = \sin(X + Y) + \cos(2x + 3Y)$. Let's throw on this surface several dozen random points in different places. And then we will remove the surface. We will see several dozen points in space, located chaotically, according to an incomprehensible law. If you rotate the coordinates, then the location will change like the starry sky. These are several dozen important political events that we see in world history and politics. To us, these points seem to be located chaotically. But if we find a functional dependence according to which these points are located in space, then everything will become beautiful and understandable.

Many bygone thinkers were looking for such a relationship. Marx, Lenin, Stalin, Mao Zedong, Deng Xiaoping, Kim Il Sung studied. And something seemed to work. Something didn't work.

The surface that Marx, Engels, Lenin, Stalin were looking for was just a plane. The simplest plane. They were looking for at least a plane, at least some kind of law. They accepted that material interest rules all events. That all people are equal, and

just by accident some of the proletarians, some of the bourgeoisie. And further, some seek to exploit the people, while others seek to free themselves from exploitation under the slogan "to establish social justice." They tried to fit all historical events under this model. They rotated and tilted this plane in different ways. And they even groped for something. And it seems that even Lenin roused the people to revolution. But then there were wars, repressions, wars again, repressions again, tens of millions were exterminated, and everything collapsed in 1990.

It collapsed, but by some miracle, China, observing Russia from the side and making the right conclusions, taxied away from the Russian path. The privatization (started simultaneously with Russia) was stopped. The money stolen abroad was returned (under threat of execution of relatives). And another path was found that led to success.

China's success has provided a lot of additional information about the paths of human development. Gave many points in space through which to build a surface. And we managed to build this surface. Of course, figuratively speaking. The solution lies, of course, not in analytic geometry, but in analytic politics. And the solution cannot be obtained without the latest achievements of science. Namely in the science of genetics.

To understand the whole of political life, two new concepts must be introduced. New not only for politics, but also for biology itself. Namely: analog and textual thinking. The essence is clear. It's like analog audio recording and digital recording. If you listen to both versions of the recording, then with high-quality parameters of discrediting (from 192 kb / s), no one will notice the difference. However, the savings in the amount of information are obvious. An audio file of 5 mb when recording in mp3 format can be packed up to 1 mb. And plus to this, it is easy to process, you can do a lot of useful operations on it, editing, video clips, etc.

Of course, textual thinking does not come out of the blue. These are evolutionary accumulations. At first, a person painted

something on the rocks. Then he learned to convey meaning using signs, etc. And of course education.

As will be shown below, analogue or textual thinking generates very significant differences in the behavior of people and the qualities of society.

All people have both analog and textual thinking. But in different proportions. Analog is when we repeat what we heard somewhere, that is, to ak audio file. There can be a lot of such files and a person can give the impression of a well-read and intelligent person. If we add to this a purchased dissertation (like Putin's), then a complete image of a modern advanced person, a representative of the elite, is created. However, the analog person is often contradictory because he has memorized conflicting passages from different sources. This is why Putin is constantly contradicting himself, which even schoolchildren notice.

Textual thinking is when information is written in our brains as ordered text. When new information is entered carefully, in an orderly manner, with verification of agreement with the previous information. This is really elite thinking. And if we look at the flanks of such a distribution, we will see analog people who shout out populist slogans, or slogans that the authorities need. And we will see digital people with systemic knowledge, but in our country historically (after the Bolshevik genocide and the influx of Great Russians) these people are a minority and they do not have enough power to listen to their opinion.

Well, and two more concepts that have already been used by Marx and Lenin are social and antisocial behavior and thinking. In fact, these concepts largely coincide with the concepts of the proletariat and the bourgeoisie. The bourgeoisie are always selfish, antisocial. Almost always. Therefore, they are bourgeois. And the proletarians are always friendly, collective, they are comrades in misfortune. And they strive for a social order. Towards social justice. But as soon as they come to power, they begin to behave like a bourgeois. Alas.

As history has shown, it is not possible to build a social system acceptable to all on the basis of social and antisocial thinking alone. The power of the egoists creates a wild, inhuman order. The power of the socialists introduces equalization, savagery and poverty into society. And also leads to genocides of smart people.

So, I have listed the main parameters of the division of society into classes in a new way. Now this is not dividing the segment into two parts, but dividing the plane into 4 quadrants. Along the same axis, this is analog and textual thinking. On the other axis, it is social and antisocial thinking. There are 4 classes in total.

Types of thinking.

1. Analog

1-1. Social

1-2. Antisocial

2. Text

2-1. Social

2-2. Antisocial

That is, there are 4 quadrants in total, 1-1, 1-2, 2-1, 2-2.

The above table (now we will show and tell) allows you to explain all the troubles of world politics and history. Of course, only the flanks of the distributions are reflected in the table. In reality, there are mixed types of thinking, in very different proportions and with very different individual characteristics. All historical events took place without knowledge not only of today's theory, but also without knowledge of Marx's theory. Marx's theory gained prominence only at the beginning of the 20th century.

So, historical events.

1. The emergence of "monotheistic" religions is the rise to power of textualists, quadrants 2-1 and 2-2. They learned how to write texts, collect useful information, exchange information. They were able to write "sacred books", basically rewriting everything from the ancient records. They have learned to preserve the knowledge accumulated by the people. How to protect yourself from illness, how to cook food, what you can and cannot do, etc.

2. Missionary work or baptism in all places is simply the extermination of all who do not know how and do not want to read and write. At the same time, it was not particularly important to know the content of the sacred books. It was just important to respect them. Respect the texts and adore the texts. And in vain today are they looking for contradictions in the Bible. The main thing in the Bible is respect for the texts. Recognition of lyricists as an elite.

3. Marx, Engels, Lenin, Campanella - these are text writers - social. Quadrant 2-1. They tried to write a theory of social society in the form of a text.

4. American society, American democracy is a complete victory for the text-writers. A balance is maintained regarding sociality and antisociality.

5. The Russian Civil War in 1918 - this war is described as a war of the bourgeoisie against the proletarians. In reality, this is a war to exterminate textualists in Russia. Genocide of textual writers. Remember the mighty worker who shook the White Guard by the chest with the words "Paper soul!" This is exactly the same. The paper soul is a textbook. From a different angle, the civil war in Russia was an ethnic Finno-Ugric coup.

6. Bolshevik revelry in 1937, it was a mistake or not, but it was a revelry of analog, quadrants 1-1 and 1-2. The fists link is the same. This is Stalin's mistake. For the "dictatorship of the proletariat" was proclaimed, which is equivalent to the dictatorship of analog thinking.

7. Stalin was a textualist. He has many volumes of essays. But he did not attach importance to this and considered everyone like that. After Stalin, analogs ruled, Khrushchev - Brezhnev - Chernenko - Andropov. And they were all social. They wrote nothing except Brezhnev's fake memoirs.

8. To let the social text writer Gorbachev, quadrant 1-2, come into power, it was not a mistake. It was a risk. Because the lyricists in Russia were in insufficient quantities. Exterminated in civil and repression. The party felt it, but decided to take the risk. And she

lost. Gorbachev did not find enough support in society and he was kicked out with a bang by analogue - antisocial, quadrant 1-2. Yeltsin and Putin. The blockheads. Gorbachev tried to seek support from lyricists, who are in abundance in the West. But these were not our textbooks, mostly antisocial lyrics. They have not been adapted to Russian reality. They did not bring anything good to Gorbachev. And Yeltsin and Putin were generally advised only to the detriment of the people.

9. The collapse of the USSR is the refusal of peoples and their leaders to obey the analogous leadership of the USSR.

10. Today the analogue antisocial Putin is in power. He is not friendly with computers and texts. He has a purchased dissertation and a criminal record. The further, the more he himself becomes convinced of his insignificance. He relies on the same nonentities: Fursenki, Kovalchuk, Timchenki and other Mutki. He understands that something is wrong in the country. But he has no idea what it is.

11. What has China done in its reforms. China was able, intuitively or otherwise, to shift the party from the dictatorship of analog social (proletariat, 1-1) to the dictatorship of social textualists (2-1). And lyricists, using knowledge and the ability to accumulate and apply knowledge, quickly raised the economy. At the same time, sociality was preserved in the party, that is, the laws worked and corruption and embezzlement were suppressed. In China, this shift of the center of gravity from the dictatorship of analog social (1-1) to the dictatorship of social textualists (2-1) was successful. Because in the history of the great civil war there was no extermination of the text-writers. Therefore, those leaders who have chosen the course for textbooks, they received the support of millions of textbooks - entrepreneurs and skilled people. In addition, China had before its eyes the negative experience of Russia.

12. Who was Hitler. He was a lyricist, he wrote the book "Mein Kampf". and his movement was eastward and could not be otherwise. For the West is ruled by lyrics. The whole so-called.

the Holocaust was the destruction of analogue Jews, the poor, the freaks and poverty. Cleansing the nation. That is why Germany rose so quickly after the war. She cleared herself. And after the war the USSR plunged into a riot of Bolsheviks, analog. Into the orgy of drunkenness and victoriousness, from which he cannot get out to this day.

Here are the main events in a nutshell through the prism of the new 4-class theory.

What to do? It is necessary to find and elect to the power of a social textbook. This is hardly Grudinin, and it is not for nothing that Zyuganov (analog social) gives preference to him, and it is not for nothing that Zyuganov gave up power in 1996, because he did not meet the needs of the Motherland and was aware of this. Rather, it is necessary to search among the Navalny, Boldyrevs, Bondarenko, Engalychevs, young people.

The new leader should be recruiting a team of social writers. And everything will work out for them as in China. You just need to remember that textualists in our country are worth their weight in gold. They are exterminated. All scientific candidates and doctors are fake, careless, purchased. Like Putin and his daughter. They are not lyricists. They are analog. They will destroy the country.

Preliminary. Linguistics.

There is a common language!

12 июня 2017, 20:08

Сегодня ввожу в Яндекс-переводчик фразу:

Бравый парень.

А он мне выдаёт:

Brave guy.

То есть фактически оба слова в английском переводе созвучны русским словам Бравый х*й! Случайность? Не думаю.

Вот небольшой словарик от Бориса Новицкого:

Ткать – Weave [вив]. То есть древние обитатели Британских островов с-вив-али нити при плетении. Начальный гласный здесь ослабленный, подвергся редукции: с-ВИВ-ать – ВИВ [Weave].

WEB (сеть, паутина, ткань) на древне-английском было webb (сеть паутина, ткань) от протокорня *weban. И одна из форм слова ВИТЬ, СВИВАТЬ.

Можно присмотреться к слову ПЛЕСТИ, ПЛЕТУ – PLAIT. СОБОЛЬ → SABLE (СБЛ → SBL). Нет сомнений в русском происхождении слова «соболь». Русь испокон славилась соболями и торговала ими.

САДНИТЬ, печальный → SAD (СД → SD). В. Даль: Из др.русского садно – рана, ссадина. Осаднить, ссаднить, посаднить, насаднить, досада, саднить душу. насадный, досадный.

СЕДЛО → SADDLE (СДЛ → SDDL). [др.англ. sadol седло. От *sed- сидеть].

САМ → SAME (СМ → SM)

ЗВЕРИНЫЙ, СВИРЕПЫЙ → SAVAGE (С(З)В → SV).

Я бы добавил сюда ЗВЕРЬ = BEER. И БЕРЛОГА = BEER LAGER или ЗВЕРИНОЕ ЛОГОВО.

СКУДНЫЙ → SCANTY (СКДН → SCNT). Инверсия: ДН-NT.

СКАНДАЛИТЬ → SCOLD (СКНД → SCLD).

СКРЯБ-АТИ → SCRIB-E (СКРБ → SCRВ). [«Писать» сер. XV в. От лат. scribere «писать»]. СКРЯБАТЬ, КАРЯБАТЬ. С. Есенин: «Дар поэта — ласкать и карябать».

Я бы добавил сюда современное ДЖАКУЗИ (аналогичное ДЖОКЕРУ=JE ЦАРЬ) = JE (артикль) КУЗЮКАТЬ (щекотать).

СКРУТИТЬ → SCREW (СКР → SCR).

О-ЗЕ-РО → SÆ → SEA. [др.англ. sæ море, озеро].

СОКРЫТ → SECRET (СКРТ → SCRT).

СИД-ЕТЬ → SEAT (СД → ST). Типичное чередование согласных Д-Т.

САД-ИТЬ, СЕЯТЬ, → SEAD. Связано со словом САДИТЬ (сеять).

СЕМЯ, СЕМЕНА → SEM-EN (СМ → SM).

ШЕЛУХА → SHELL (ШЛ → SHLL).

СИЯНИЕ → SHINE (СН → SHN).

От авторов: аналогично САХИНЫ (народ, якуты) переходят в CHINA (Китай). Джекки Чан = Джекки Chan = Джекки Сахин.

СРАМ, СТЫД → SHAME (СРМ → SH(r)M).

От авторов: родственное ШАРМ с близким смыслом.

КОРОТ-КИЙ → SHORT (КРТ → SHRT). [др.англ. sceort, scort короткий., русск. korotkij]. В XVI веке «SC» в английском языке перешло в «SH» (Ш).

От авторов. Ещё ближе немецкое: КУРЦ.

СЕСТРА → SISTER. Там все родственники одинаковые.

КАТАТЬ — S-KATE (КТ- s-КТ). Достаточно отбросить приставку «s» и проявляется русское слово КАТАТЬ.

СЛЕД → SLOT (СЛД → SLT).

СЛЕМ-АК (улитка), Слизкий → Slime (СЛМ → SLM).

МАЛЕНЬКИЙ → SMALL (МЛ → MLL). Лингвисты, как правило, предлагают отбрасывать «с». Однако в данном случ. «с» имеет происхождение от древнерусского «се» — «это». Произносилось же в древности: се малый.

СМРАД, РЕЗКИЙ → SMART (СМРД → СМРТ). В. Даль: «Смрадъ, от смердеть».

СМОЛА (запах) → SMELL.

СНЕГ → SNOW (СН → SN).

СУТЬ, истина, правда → SOOTH (СТ → STH).

СТОГ → STACK (СТГ → STK).

СТРАВА, солома → STRAW (СТРВ → STRW). Страва — еда, пища для скота. В. Даль: «Яровая соломка кормовая».

16) Весьма возможно что древне русское ЕР = Ъ сохранилось в английском языке в виде буквы E в конце.

LOVE = ЛАВ. NIKE - НАЙК и т.д. См.

Why does no computer succeed in accurate translation?

January 23, 2017 1:06 pm

There are a lot of "translators", all sorts of office translators like Prompt, Lexicon, Socrat, several online translators like Yandex-translator, Google-translator, etc. Computer capabilities have increased a thousandfold. But not a single more or less complex text, both purely everyday and narrowly specialized, will not be translated in an acceptable form. What's the matter?

And the fact is that each language cannot be accepted only as a collection of words connected according to the rules of grammar. In every language there are stable groupings of words that have a unique meaning. We would call this the penetration of the agglutinative language into the inflectional one. For example, in Russian there is a phrase "cut your nose". And it cannot be translated as a collection of words connected by grammar. It will turn out to be complete nonsense. And there are thousands of such combinations. At the same time, an adult can easily distinguish such combinations by the first word. That is, such combinations in a conversation sound just like separate words. The inflectional language merges with the agglutinative one.

Thus, we get an interesting political conclusion. It is simply not possible to teach an adult to fully retrain into another language. You can teach him a basic set of words and expressions. But a person cannot fully understand a foreign language, all its nuances, half-hints and shades of meaning, and even more so, a person cannot think in it. Therefore, all the current attempts of the Balts or Ukrainians to quickly force the Russian-speaking population to retrain the local language are counterproductive. Such processes have been going on for many decades.

In Russia and the USSR, they have never forcibly forced non-Russian-speaking peoples to completely retrain into Russian. The Russian language was only a language of communication between

different peoples and a bureaucratic language. And all the local languages were preserved and no one banned them.

Hence the conclusion is as follows. The current authorities of the Baltics and Ukraine are committing violence, forcing Russian-speaking people to retrain into the local language. However, this is a payback for the past atrocities of the Russians ...

Replacing the letter combination XB with F.

Следы в лингвистике, в языках. Их трудно уничтожить, даже меня алфавиты, хотя и это успешно и целенаправленно делается. Например, под видом окультуривания, в последние столетия интенсивно вводится буква Ф, заменяя собой знаковое звукосочетание XB. Помню в деревенской школе, в 60-е нас активно учили, что слова ХВАБРИКА, ХВАНЕРА, ХВИЛОСОФИЯ, ХВИЗКУЛЬТУРА, ХВИНЛЯНДИЯ, ХВРАНЦИЯ, КУХВАЙКА, и прочие - это некультурное, деревенское произношение. Надо говорить: фабрика, фанера, философия, физкультура, финляндия, франция, фуфайка. Но дело было в другом. И тут не только религиозные мотивы, дескать XB - это Христос Воскрес. Тут другое, расскажем ниже, в главе «Главное слово человечества». Параллельно и на Западе идёт замена прочтения буквосочетания Ph как F. Здесь видимо тоже не всё чисто. Сюда же следует отнести анализ названий населённых пунктов и анализ фамилий россиян.

Историки копаются в каких-то древних долговых расписках, сохранившихся на бересте. И при этом недостаточно внимания уделяют главным историческим свидетельствам: лингвистике и названиям населённых пунктов. То есть всё поверхностное давно использовано. А копнуть глубже не позволяют мозги. Нужны сильные мозги, чтобы продвинуться в изучении истории.

В области лингвистики историки давно поймали достаточно очевидные сходства типа WALL (стена) = ВАЛ, или СВИСТ = WHISTLE, или ПОТОП = DELUGE = ЛУЖА, или HUNT =

ОХОТА. Но если копнуть глубже, то находится масса языковых совпадений, которые не так очевидны. К примеру, такая цепочка. ЦАРЬ - ЦАРИЛЬ (ср. хахаль) - КОРОЛЬ - ИЗРАИЛЬ - ГРААЛЬ.

The relationship of the letters C and G.

First you need to understand the relationship of the emergence of the letters C and G. It is absolutely not obvious. This relationship can be seen in the spelling of the letters C and German G in school copybooks.

В значительном проценте слов G=Ц
не случайна схожесть немецких и русских букв:

 Это следы истории.

ГЕР - МАНИЯ = ЦАРЬ МАНИЯ.

Этот перескок объективно существует, подтверждается многими примерами (Гер-мания = Царь-мания, Граф = Царев, Герб = Царёв, и т.д.) и, возможно, уже отмечался историками. А может быть и нет. Или ему не уделялось достойного внимания. Он не столь очевиден как естественные перескоки, обусловленные произношением. Здесь нет родственного произношения.

Этот перескок скорее всего возник ещё в русском языке из-за необходимости введения буквы **Ц**, которую на начальном этапе ввели добавлением горизонтальной «резающей» палочки к букве **С**: **С** → **G**. Это был русский язык! И в нём буква **G**, которая читалась как **Ц**.

Однако в дальнейшем значение и произношение буквы **G** (уже в западной Европе) изменилось на **Г**: **G** → **Г**. Не исключено, что это произошло целенаправленно, в осуществление общего плана дробления и разъединения культур и народов. Таким образом буква **G** стала латинской и читалась как **Г** или **Ж**.

А в русском языке букву **Ц** придумали и ввели ещё раз, заново, и уже стали писать как сегодня: **Ц**. Причём (!) сделали её в рукописном исполнении похожей на латинскую **G** (см. рисунок ниже). Данный перескок - не выдумка. Достаточно посмотреть несколько примеров (см. далее) и становятся ясным происхождение многих западноевропейских слов. Припомним слова **ТАНЦЫ** и **TANGO**. **ГОЛ** - это **ЦЕЛЬ!!! GOAL** - так и переводится. Вот она **G = Ц**. Вспомним также украинское **ГАРНЫЙ**, что значит **ХОРОШИЙ**. Оно родственно слову **ЦАРСКИЙ**. **G ↔ Ц**.

Возможно также, что перескок **G ↔ Ц**, произошёл через буквы **G - Ж - Ш - Щ - Ц**.

Есть и путь перескока **G ↔ Ц** через малые буквы (отражено на картинке). Например, в близости написания малых рукописных букв **g** и **ц** (хвостики внизу).

Следует также обратить внимание на последовательность букв в русском и латинском алфавитах. Если в русском (пост-греческом) алфавите идёт **А - Б - В - Г - ...**, то в латинском идёт **А - В - С - ...**. То есть, буква **С** в латинском алфавите фактически (=Ц) занимает (с учётом родства букв **Б** и **В**) как раз место буквы **Г**. Вряд-ли это случайно.

В дополнение к Фоменко-Носовскому:
 В значительном проценте слов **G = Ц**
 Не случайна схожесть немецких и русских букв:

Gg = Цц. Это следы истории.

**ГАЛЛЫ = ЦАРИ. МОНГОЛЫ = МАН-ГАЛЛЫ.
 МОНГОЛИЯ = МАНЧЖУРИЯ = МАН-ГАЛЛИЯ =
 ГАЛЛ-МАНИЯ = ГЕР-МАНИЯ.**

Исторически германский народ
 происходит с территории России.
 Это есть в немецких исторических эпосах.
 Но в завоеваниях дошёл до Китая.
 Они считали и называли себя царями = галлами.
 Расселение галлов=царей с территории России:
**АНГЛИЯ = АН-ГАЛЛИЯ.
 ГОЛЛАНДИЯ = ГАЛЛ-ЛАНДИЯ.
 ПОРТУГАЛИЯ = ПОРТУ-ГАЛЛИЯ.
 ГЕРМАНИЯ = ГАЛЛ-МАНИЯ.
 БОЛГАРИЯ = БУЛГАРИЯ = БУЛ-ГАЛЛИЯ.
 ГАЛИЦИЯ = ЦАРИЧИЯ. УКРАИНА = У-ЦАРИНА.**

**МОНГОЛО-ТАТАРСКАЯ ОРДА =
 МАН-ГАЛЛО-ТАТАРСКАЯ РАДА =
 GERMAHO-ГАЛИЦИЙСКО-БУЛГАРСКОЕ ИГО.**

Никогда нога монгольского воина не ступала
 на территорию России. Вся современная
 история написана германскими академиками.
На наших глазах это иго восстанавливается.

Слово **Русь** одного происхождения с **Рейх**
 и обозначают одно и то же. Русь – это остатки
 после переселения галлов в западную Европу.

Figure 16.

Why was the part of the word "th" and "him" in Russian invented?

22 января 2017, 13:45

Имеются ввиду прилагательные типа ТАКОГО когда произносится ТАКОВО. Или слова типа СЕГОДНЯ когда произносится СЕВОДНЯ. Или слова типа ВСЕГО когда произносится ВСЕВО. И так далее.

Я немного погуглил и убедился, что удовлетворительного объяснения этому нет. Одно из мнений в интернете такое: никогда в старину слов типа ТАГАГО и ДРУГАГО не было. Ни в одной самой малой народности. Всегда говорили ТОВО и ДРУГОВО. Никаких древних документов, где было бы

чёрным по белому написано ТОГО или ТАКОГО или ЧЕРНОГО или БЕЛОГО, нет.

Значит это искусственно внесённый в наш родной язык элемент. Видимо угро-финский элемент. В плане и программе общего процесса перемирания истории. Скорее всего таким преобразованием языка хотели что-то историческое скрыть. Какие-то события, факты, имена. Но какие? В 15-16-17 веке внести в русский язык такие новоделы было очень просто. Книг было мало, издавалось тоже мало, типографий было совсем мало. Достаточно было приказать в одной типографии, приврать о якобы исторических корнях, и дело сделано.

Однако осталось КУЛИКОВО поле. Может потому и осталось, что это поле все знали и нельзя было наврать, что битва была изначально на КУЛИКОГОМ поле?

Есть небольшое наблюдение: буквы В и Г в нашем алфавите находятся по соседству. Но как это могло повлиять, не знаю.

Возможно, таким способом хотели отделить прилагательные от принадлежности к чему-то или кому-то.

Ending -IN in names of cities and surnames.

Another source of historical knowledge is the names of settlements. It would seem that all the names have already been revised, but something has not been noticed. For example, they did not notice that some of the settlements have names ending in -OB, -EB, like Slavic surnames. Kharkov, Guryev, Rostov, Mokhov (which later became Moscow), Ivanovo. Or villages: Ivanovka, Popovka, Kolosovka, Yarilovka, Vorobyovka, Yasenevo, etc. And the other part of the settlements has names ending in -IN, -YN. Tsaritsyn, Kashin, Sofrino, Kalyazin, Borodino, Strunino, Monino, Fryazino. Or villages: Babushkino (which became a district of Moscow), Zyuzino (also), Trubitsyno, etc.

It would seem, what information can be obtained from this? It's just (we are used to thinking) that affiliation in the male line ends with -OV, Guriev, Rostov, and for the female line it ends with -IN: Kalyazin, Tsaritsyn. However, it is not. Here it is important to understand what is primary and what is secondary. And it turns out that the names are primary. And the gender identity was invented later, and thus the names alien to the Slavs were inscribed in the Russian language and received very plausible explanations. And they even enriched the Russian language with femininity.

Settlements with names ending in -IN were brought by the Great Russian conquerors, Yakut-Slavic hybrids. Among Mongoloids, the combination IN is used in languages very often and everywhere in many countries. It means something like "person". For example, translations of the word MAN: Chinese: Rén, Mongolian: KhÜN, Tamil: Āṇ, Turkmen: Ynsan, Chukchi (optional): ngun, nemin, feefin, pwisin. Surnames: Xi Jin Ping, Ho Chi Minh, Kim Jong Un, Hafizullah Amin, Sun Yat Sen, Mao Zedong, Deng Xiaoping, Kim Il Sung, etc. Cities: Harbin, Beijing, Nanjing, and even reached (with the Great Russian conquerors) Minsk, Pristina, Berlin and Athens. This is where the Great Russians have reached! There is also Sakhalin Island. There is Fin-Lyandia, the country. The Phillippines, the islands are also there. Etc. The names of the peoples: Nenets, Nanais, Sahinas, Mordvins, Tartars, Huns, these are also variations of the IN combination. Among the Finno-Ugric newcomers, the names of the villages were similar to the surnames, with a Yakut flavor. Deryuzino, Sofrino, Monino, Fryazino, Golygino. The endings show who they belonged to. Strunino, Kolpino, Bilibino, Babushkino. Dvina river, Lena. More cities: Dubna, Klin, Smolen (sk), Tikhvin, Kolomna, Nogin (sk), Rybin (sk), Berlin (!), Szczecin, Aberdeen (!), Aleksin, Kalyazin, Sakhalin, Dudinka, Barguzin, Gubkin, Wedge, Kamyshin, Usin (sk), Inta, Neryungri, Minsk. Thus, even the imprint of the Great Russians remained on

the German capital. Even in a Scottish city. The aggressors also reached those places.

It is possible that because of the age-old friendship of the Khazaria and the Horde, the names of the peoples of Chechens, Dagins, Ingushi, Georgians, Armenians, Ossetians arose.

For this reason, the invaders began to believe that villages with endings in - OVKA are subordinate to villages with an ending in - INO. Apparently in that era it was the rule and the law. By the way, the word VILLAGE itself is etymologically related to the word TSARO. That is, kings live in it. This word was created without the influence of the Finno-Ugric people, but was actively used by them.

Even at the institute, I was surprised that one student, from Yalta, is of Mordvin nationality (!). Later I learned that along with the eviction of indigenous peoples from the Crimea, it was artificially populated by "Nordic peoples". Now everything is clear. Including why the Crimean Tatars, the autochthonous population of Crimea, moved from Crimea to Asia. By the way, the names of the peoples themselves speak for themselves: Mordvin, Tatar, Barguzin, Basurmanin. True, both a Slav and Ukraine. Apparently, initially these words were imposed on the Slavs by the Great Russians in the process of remaking Russian names.

By the way, the term "Slavs" does not come from "glory" at all. The term comes from "word". Proof of this are the peoples of Slovaks and Slovenes. And only then moronic historians attributed to the Slovenians a pathological desire for fame. Perhaps by confusing the Slavs with the Great Russians. That's really who longs for glory and they have everything great.

Output. The Huns found their happiness by conquering Kievan = Slavic Rus.

One of the variations of the IN combination, possibly the CHAN variation. Vowels were never written before, you could read anything. And it means approximately the same thing, a person, but in an external sense. That is, within the Mongoloids, this

person is IN. But the Slavs for themselves call this Mongoloid KHAN. Well, after the conquest of the Tatar-Mongols, the word KHAN acquired an imperious connotation.

In a similar way, for example, the adverbial participle entered the Russian language. Like: he was walking along the road, THINKING about the upcoming meeting. It's just that variants of the phrase came from different tribes and dialects: HE THINKS and HE THINKS. In our village they still say so, Lipetsk region. "He is sitting and thinking." Well, in the process of linguistic grinding, the second option was not forgotten for good, but was pushed into the field of participles. For a similar reason, our citizens often in their comments confuse verbs with a soft sign at the end and without a soft sign. ... For example, in our Yelets language, the normal phrase is: HE SIT AND THINKING. That is, a verb with a soft sign. And according to the accepted grammar, one must say: HE SITS AND THINKS. From here and in the comments, an unnecessary soft sign sometimes pops up in the endings of verbs. He AMAZED by you. I LIKE lush bouquets.)))

By the way, Kabaeva's grandmother is Zatsepina. From the descendants of the Tatar-Mongols, like Putin himself. As well as the famous composer.

<https://www.youtube.com/watch?v=xoQrFD6FIJM>

These are the main points.

Finnish, Finno-Ugric and Mongoloid surnames.

Regarding surnames with endings in –IN. Not everything is so transparent and obvious here. Many argue, they say, back in the 18th century, many Slavs did not have surnames at all. Let it not be. However, it was the surnames with the ending in -IN that were invented and adopted by the first to denote the "high" society, the real Great Russians. There is no doubt about that. Well, people with other surnames could also get into this "higher" society, with the ending for example -OB, -EB. But the backbone of the Great Russians bears surnames with –IN and there is no doubt or

hesitation in the meaning and origin of these surnames. These are the descendants of the Tatar-Mongols, conquerors and enslavers of the Slavs. To be convinced of this, it is enough to look at the list of names that are in power today and brazenly rob the Slavs (see below).

The ending of the surname in -IN means a Great Russian surname. Such surnames are related to Finnish surnames: Peltonen, Kekkonen, Vainonen. These are not Slavic surnames. These are the names of the descendants of the conquerors from the northern Tatar-Mongols. This is haplogroup N. These are strangers for the Slavs. The same strangers as the Chechens (J). The Slavs have a haplogroup R1a and surnames in -OB, -EV. Of course, deviations are possible.

The origin of the Great Russian surnames is associated with the ending -IN, which is traditional for Mongoloids. It is traditional for China, Korea and all Mongoloid countries. Kim-chen-un, Xi jing ping, Ho Chi Minh, Amin (Afghanistan). Finnish surnames: Kekkonen, Korhonen, Lehtonen, Rantanen, Virtanen, Mäkinen, Hammäläinen. Compare: Pichushkin.

And there are also Finnish surnames with a different ending: Mikkola, Rantala, Seppälä. Compare: Chikatilo.

I had a hypothesis for a long time and it is being confirmed. The American surnames Biden, Blinken and the like are the same Tatar-Mongols who swam across the ocean with the surnames -IN. That's why Biden met with Putin and betrayed Ukraine. The Tatar-Mongols have their own game. And this game is in favor of China. Because the Tatar-Mongols are Chinese hybrids.

The people of the Great Russians themselves arose on the basis of the crossing of the Yakuts or Chinese, mainly with the Slavs during the wars. Where the Slavs won, Kazakhstan, Kyrgyzstan, Tajikistan, Uzbekistan, Afghanistan, Pakistan, India (India) arose. And surnames with endings in -OB, -EB, in accordance with Russian grammar. Where the Mongoloids won (they stole girls or took Slavic captives), the Great Russians arose: Finland (the westernmost of the Great Russians), Nenets, Mari El, Udmurtia,

Mordva, Chuvashia, as well as already Russified (but not genetically Slavs) Chud, Vepsy, Vod , Krivichi, Radimichi, Mokshi, Erzya and other small peoples.

Three waves of invasion of the Finno-Ugric to the Slavs.

Several waves of the invasion of the Slavs by the Great Russians can be traced. Some may have been invented by historians. Perhaps, in reality, there was simply a resettlement of the Great Russians to more southern regions. There were no special obstacles, the appearance was European.

The first wave of the Great Russians' invasion of the Slavs happened in the era of the early Ruriks (according to official history). Who were allegedly invited by such stupid Slavs who were not able to control themselves. This version is hard to believe. It can be said that someone invited Yeltsin and Putin. It's just that historians and chroniclers misrepresented to please the authorities. At the same time, the allegedly invited Rurikovichs settled most of Udmurtia and central European Russia. Haplogroup N1a1.

The second wave of the Great Russians' invasion of the Slavs took place in the 13-14th century (also according to official history), with the invasion of the northeastern Tatar-Mongols, when about 1 million migrated from the Tatar-Mordovians to Slavic Russia with a total population of Russia of about 10 million. The Tatar-Mongol conquerors did not just come, robbed, and left. No. They came and drove the owners out of their homes. Those who did not leave were killed. And they settled down forever. And they learned a foreign language. And they took Russian concubines. And they became Russians. Just like that, some Russians have replaced other Russians. Like the "new Russians" today.

The third invasion of the Tatar-Mongols took place after the revolution. In 1917, after 300 years of rule by more or less supporters of the ethnic Slavs of the Romanovs, or at least the Aryans (Germans), the Finno-Ugric Lenin (the real surname of his

grandfather Ulyanin) brought them to power again. Under the erroneous slogans of Marx. It is unlikely that Lenin himself understood what he was doing. But he instinctively felt that he belonged to the Bolsheviks and therefore, for any political or ideological mistakes, he worked for his genetics and achieved success. During the civil war, there was a mass extermination of millions of wealthy Slavs by "proletarians" and "Bolsheviks" from the Tatar-Mordovians. And they came again and again settled in the Slavic villages and villages. In Slavic houses. A good illustration is the image of Sharikov from Bulgakov's novel. These are the Sharikovs who took the place of the exiled wealthy Slavs. It was only necessary for Sharikov to assign a surname to -IN. This is Bulgakov's mistake.

Near our village (Yeletsky district, village Kolosovka), a couple of kilometers away, there is an ancient huge orchard. It was always called "Khutor". Nobody knows the owners anymore. Long-aged or degenerated apple and pear trees. But there are also many edible fruits. We went there as boys in the 60s. The trees were old and thick even then. An abandoned old house stands in the middle. At one time, during perestroika under Gorbachev, the descendants of the owners loomed, they came from abroad. But they left their venture, due to the lack of prospects.

In addition, during Stalin's collectivization, hundreds of thousands of Slavic families were also expelled from their homes and sent to Siberia. In their place, under the guise of "proletarians", came idlers, marginals, alcoholics and scoundrels from the Tatar-Mordovians. So the degradation of the population of Russia took place and this is the general law of mankind, it is degrading. Such huge brain resources are not needed by Nature. This is an evolutionary leap. More precisely, they are needed, but in a slightly different performance, aimed at somewhat different, socially useful purposes. But will you keep people from using these resources for selfish purposes? However, our task is to preserve these brain resources from degeneration.

The same thing happened during the eviction of the Crimean Tatars. In their place, Soviet retirees of the Great Russians were settled. This was already a malicious policy of the Stalinist authorities for the development of the occupied territories, continued out of thoughtlessness by Khrushchev and Brezhnev. There are recollections of immigrants to Crimea who came and settled in the "still warm" houses of the Crimean Tatars, with chickens and cattle.

Here they are today, handsome Great Russians, all in power. Putin. Sechin. Sobyenin. Nabiulin. Kudrin. Volodin. Zorkin. Prigogine. Bastrykin. Rogozin. Roldugin. Yakunin. Potanin. Baturin. Vaino. Oreshkin. Girkin. Pushilin. Cherkalin. Mishustin. Bushmin. Spitsyn. Chernomyrdin. Stepashin. Babushkin. Rashkin. Chaplin. Merkulshkin. Platoshkin. Grudinin. Lisin. Lesin. Resin. Aven. Nadezhdin. Yeltsin. Borodin. Rokhlin. Ilyukhin. Travkin. Poltoranin. Yashin. Kostin. Kalugin. Panin. Chichvarkin. Razin. Sheinin. Shein. Shokhin. Norkin. Lukin. Markin. Khazin. Etkin. Minkin. Delyagin. Mlechin. Shingarkin. Khloponin. Khoroshavin. Coumarin. Savin. Mizulina. Rodnina. Sorokin. Latynina. Butina. Kashin. Mukhin. Chernin. Malkin. Galkin. Tamodin. Michurin. Gagarin. Shchekochikhin. Stalin. Lenin (= Ulyanin). Herzen. Bakunin. Khalturin. Kropotkin. Bukharin. Blumkin. Rasputin. Okhlobystin. Stolypin. Potemkin. Minin. Bulganin. Kosygin. Kalinin. Bakatin. Chicherin. Zamyatin. Zimyanin. Kamanin. Sulakshin. Apukhtin. Ilyin. Denikin. Prilepin. Solzhenitsyn. Rokhlin. Susanin. Papanin. Karelin. Pichushkin. Yudashkin. Spitsyn. Kim Chen In. Xi Jing Ping. Ho shi min. Amine. Mussolini.

Россия. Гаплогруппа N. Гаплогруппа N отделилась от китайской гаплогруппы O примерно 10.000 лет назад. А их общий предок NO отделился от предка европейцев R, родоначальника групп R1a и R1b, примерно 40.000 лет назад.

Figure 17. On the right - the Yakut shaman Gabyshev.

In principle, Mongoloid facial features (and character traits) are easily seen in Volodin, Mishustin, Shoigu, Vasiliev, Nabiulina, Kabaeva. And Finnish redheads, hybrid, at Kudrin, Chubais, Peskov, Sheinin. Others have more European facial features, but it's still from the inside, mostly Mongoloids. Or fooled Slavs. Or the yakuza.

Great Russians have learned to speak Russian. Forgot your ethnic language. And they became Russians. There were still less of them than the surrounding Slavs. They even appropriated the name "Great Russians" and invented the ancestors of the "Pomors". And they came up with "Rurikov". They hardly existed. Came up with an ancient story with pictures. The term "Great Russians" most likely arose from the feeling of inadequate greatness, superiority, pathological ambition, which are inherent in all Mongoloids and their hybrids. And also an inadequate lust for power and territory. Recently I talked with an old man with a

surname in –IN. He worked all his life as a simple company bus driver. Small fry, no talent. But how much ambition! How he scolded the doctors! How disrespectful he spoke about an intellectually intensive profession. And the operation to remove the adenoma was done badly to him, he had to redo it, and the district doctor is an alcoholic ...

Until the 9th century, only the Slavs were Russian. Today Russians are Great Russians. The Great Russians appropriated the Russian language, and the Slavs were squeezed out of the country (Poles, Ukrainians, Belarusians, Balts) were forced to speak local dialects and separate from Russia. The Russian language is based on the Sanskrit language, it is also the ancient language of the Slavs. The Great Russians appropriated the name Russia, slightly changing it to the Vologda style, to Russia. The Great Russians infiltrated Kievan Rus and, after 1200 years, squeezed both Ukraine and Belarus out of it. And even earlier, Poland was squeezed out, and this is a separate story, in the 16th century there were still attempts by the Poles to ascend the Russian throne. They also considered Russia a Slavic country. But these attempts were bravely suppressed by the Great Russians Minin and Pozharsky. Supported by Ivan Susanin.

Few understand the political side of the Zucchini 13 Chairs. And this side is very, very serious. Since 1917, the Finno-Ugric minority came to power in the country. Not Slavs. Chinese hybrids, haplogroup N. But the appearance has historically been selected as European. And immediately Minin and Pozharsky, Susanin, Razin, and others became heroes. That is, those who harmed the brothers, the Slavs, the Poles. This is what the entire policy of the CPSU was aimed at. To break with the Slavs. And Zucchini just went against the tide and began to work towards rapprochement with Poland, with the Slavs. Therefore, it was closed.

Abusive language. It was also brought to Russia by the Great Russians. More on this below, in a separate chapter.

In the entire history of the USSR for 75 years, there were only 20-25 surnames in power with the ending in - IN. Bulganin. Kosygin. Kalinin. Bakatin. Lenin. Stalin. Chicherin. Zamyatin. Zimyanin. Pervukhin. Yudin. Gorshenin. Kuzmin. Kirillin. Zhigalin. Shokin. Elyutin. Zolotukhin. Talyzin. Chudin. Shcherbina. Busygin. Baku. Lein. Shamshin. Yashin. Goldin. Lapin. Stukalin. Khuramshin. Look at their portraits. Is there at least one Slavic open face there? There are only wonderful faces of an undefined race and nation.

Here is information from the site <https://to-name.ru/surname/familnye-okonchania.html>. The end of surnames. Tatars: -IN, -ISHIN. Mordva: -YN, -IN. (According to the reader Igor Karmishkin, pure Mordovian surnames end in -shkin, -kin, -in). Like Yudashkin, Platoshkin, Bashkin or Budyashkin. On our own, we add that probably the names with -SHOV, such as Lukashov, Burnashov, Troshev, or Ermishov, are also Finno-Ugric surnames.

Here is information from the site <https://interesnyefakty.org/russkie-familii-na-in-ov-ev/>: one third of Russian surnames end in the suffix -IN or -YN.

There is an assumption that the surnames with the ending -IN were invented after the conquest of Russia by the Tatars and meant something like "lord". By the way, the word also ends in -IN. But it was not an invention out of the blue, it relied on real nicknames. Naturally, surnames were inherited, so today the Slavs have the opportunity to contemplate in the pure the descendants of their masters-enslavers. True, some of the female part acquired Slavic surnames.

Russia is an empire.

Russia is an empire. Not Slavic. And the metropolis is Muscovy, with the Ugro-Chud = Huns = Chukhonts = Tatar-Mongols at the head. With haplogroup N, which the scientists of the burdock, for some unknown reason, attributed to the Slavs. Putin also belongs to group N. According to information from the Internet, Putin is a

Vepsian. Under the words "United Russia" is hidden "Let's preserve the Great Russian Empire" with the metropolis in Moscow. That is, the power of Mordor. Muscovites are not Slavs. Ruriks are not Slavs. Finno-Ugric are not Slavs. Tatar-Mongols are not Slavs. The Bolsheviki are not Slavs. Muscovy is only a population of 20 million. With surrounding areas of 30 million. But with their malice, aggressiveness, impudence, greed, rudeness, shouting, generally inadequacy, they keep the remaining 120 million Russians in slavery, fear and submission, of which 90 million are Slavs. Moskals = Great Russians = Ugrians = Mordva = Mordor = Chud = Vepsians are robbing Russia. They recruit people with Slavic surnames into the staff only as slaves, as clowns, as whipping boys, as scapegoats, defective, defective, with a deceitful and corrupt guts. Or, on the contrary, they put these people in those intellectually intensive areas where you really need to work a lot and honestly. Medicine, pedagogy, etc.

At present, for 30 years already, Slavic Russia has been actively plundered by Muscovy and Muscovites = Great Russians.

What surnames rule in Russia?

What social stratum rules in Russia? As you know, classic Slavic surnames end with -OB, -EB. Although there are Tatars among these surnames. The classic surnames of the descendants of the Tatar-Mongol conquerors end in -IN. There are practically no exceptions here. With today's capabilities of computers and the Internet, it is possible to compare some indicators.

Someone yells: you fire up! No, this is not incitement, it is true. Because pushing the disease inside will turn into new revolutions, wars and coups. Will turn into millions of new victims. Who has the power? The one who has the truth. Russia is a Slavic country and the root of Russia is Kievan Rus. It was from there that the settlement of the Slavs took place 3500 years ago throughout the present territory of Russia. Today this root has simply been removed. Extruded. And even his native language was taken away from him.

Let's get back to the topic. No one will deny that medicine belongs to intellectually capacious types of activity. 6 years of study, all sorts of residencies ... Diplomas are awarded to the smartest, most capable women and men. Here is a table of the names of doctors in Sergiev Posad and the region. Such an analysis can be carried out in any region of Russia. I am sure the result will be the same. Great Russian surnames with the ending in -IN are highlighted in yellow.

Специалисты всех больниц Сергиева Посада и района. 24.07.2020.

As you can see, there are not too many yellow names. There will be 5 percent. This is their share in intellectually intensive fields of activity. Most of them are administrative positions. Undoubtedly, in science, and in literature, and in music, the ratio is about the same. Although, thanks to the policy of the Finno-Ugric authorities, only Pushkin, Yesenin and Shukshin are heard by

Russians. In fact, there are much more Slavs. Always amazed at the inadequate sense of greatness present in Yesenin (and a little in Pushkin). Hugging a birch is also noted by Shukshin. These are they, merged with the land, nature conquered from the Slavs. Forgotten their Tatar-Mongolian land and nature.

Second. And here are the names of those who are in power today and who made the coup of 1917. Great Russian surnames are also highlighted in yellow. This is power. No intelligence is required here. There is enough purchased dissertation here, like most ministers, deputies and Putin himself. The most important thing here: impudence, the ability to suppress the opponent with a voice (as Butina did recently when visiting Navalny in prison), the ability to lie and not blush, intrigue, cunning, remove competitors, plus inadequate ambitions, a thirst for power, a desire to command, conquer and rule.

Фамилии сегодняшней власти.

What can I say here? The opposite is true here. There are barely 5% of Slavic surnames. Slavic surnames are used by the current government either as scapegoats (Siluanov, Golikova, Shuvalov, Pamfilova, Churov, Degtyarev), or as pea jesters (Medvedev, Peskov, Skabeyeva, Solovyov, Kiselev, Zeinalova, Mikheev), or imprisoned (Arashukov, Furgal), or killed (Litvinenko, Nemtsov, Dorenko, Isaev and 100 other names), or compromised (Usmanov, Chubais, Kirienko, Mutko, Zolotov), or political impotent (Zyuganov, Mironov, Zhirinovsky), or escaped in time from Russia (Abramovich, Prokhorov).

We draw conclusions ourselves, who is able to move their brains.

In the second table, the percentage of yellow is much higher.

Zion language period of the settlement of mankind.

Одна из самых популярных фамилий высшего сословия в Индии: Сингх. Базовый индоевропейский язык:

САНСКРИТ = СИОН-СО-ЦАРИТ.

Среди самых популярных фамилий в Китае:

Чжан (zhāng), **Чжу** (zhū), **Чжао** (zhào), **Хуан** (huáng), **Чжоу** (zhōu), **Чэнь** (chén), **Чжэн** (zhèng), **Сун** (sòng), **Чэн** (chéng), **Цзэн** (céng), **Цзян** (jiǎng).

Китайские династии:

Династия **Цинь** (221 — 206 до н.э.)

Династия **Западная Цинь** (265 — 316)

Династия **Восточная Цинь** (317 — 420)

Династия **Сун** (420 — 479)

Династия **Ци** (479 — 502)

Династия **Северная Ци** (550 — 577)

Династия **Суй** (581 — 618)

Династия **Поздняя Цинь** (936 — 946)

Само название Китая:

CHINA = СИНА = СИОН (?)

КОРЕЯ = ЦАРИЯ.

Самые главные завоеватели в мире:

Чингиз-хан = Синагога-хан.

Батый = Бату-хан = Батюшка.

Gauls.

Ранее упоминалось. В дополнение к Фоменко-Носовскому:
В значительном проценте слов **G = Ц.**

Не случайна схожесть ручного написания немецких и русских букв: **G, g = Ц, ц**. Это следы истории.

ГАЛЛЫ = ЦАРИ. МОНГОЛЫ = МАН-ГАЛЛЫ.

МОНГОЛИЯ = МАНЧЖУРИЯ = МАН-ГАЛЛИЯ =

ГАЛЛ-МАНИЯ = ГЕР-МАНИЯ.

Исторически германский народ происходит с территории России. Это есть и в немецких исторических эпосах. Однако как и где происходило формирование германского народа, это отдельная история. Думается, германцы технологически умнее россиян, потому что там меньше процент угро-финнов.

Расселение **галлов=царей** с территории России:

АНГЛИЯ = АН-ГАЛЛИЯ.

ГОЛЛАНДИЯ = ГАЛЛ-ЛАНДИЯ.

ПОРТУГАЛИЯ = ПОРТУ-ГАЛЛИЯ.

ГЕРМАНИЯ = ГАЛЛ-МАНИЯ.

БОЛГАРИЯ = БУЛГАРИЯ = БУЛ-ГАЛЛИЯ.

ГАЛИЦИЯ = ЦАРИЧИЯ. УКРАИНА = У-ЦАРИНА.

ГРУЗИЯ = ЦАРИЧИЯ; ГРЕЦИЯ = ЦАРИЧИЯ.

ВЕНГРИЯ = ВЕН-ГАРИЯ или ХАВЕН-ЦАРИЯ.

МОНГОЛО-ТАТАРСКАЯ ОРДА =

МАН-ГАЛЛО-ТАТАРСКАЯ РАДА =

ГЕРМАНО-ГАЛИЦИЙСКО-ТАТАРСКОЕ ИГО.

Вся современная история написана германскими академиками.

A little about the creators of modern history.

Our version of the History of Russia, of course, could not be entirely born in one head. It is based on the works of the classics of the New Chronology. The author has not read all of them. The main ones, of course, where it all began, are Nosovsky and Fomenko. I remember that my mother-in-law brought the book "Empire", sometime in 1990. Although they were not the first in this matter, they are also someone's successors, about which they themselves write. There were also several reputable historians, whose works the author was inspired by. Sergey Shvedov; the author of the site germanicvs.com (he does not impersonate himself); A. Dragunkin; B.I.Protasov; B. Didenko; quite authoritative site Wikipedia; and here is one of the last, often quoted here Anatoly Klyosov. As if the authors stand on the shoulders of giants. From a purely scientific point of view, this is quite natural.

But in financial terms, in domestic science, everything is the other way around, the pyramid is upside down, financial giants are budget absorbers, various research institutes and academies stand on the shoulders of low-paid scientists - single enthusiasts. These absorbers subsequently appropriate for themselves most of themselves in their deceitful compilations, speculations and dissertations. It is they who then travel to conferences and speak on television.

It is rather difficult to concentrate on the main thing in the presentation, without spreading the thought along the tree. Many authors in their expositions go into details, in criticism of the generally accepted chronology, and forget the original goal - a new, correct chronology. Yes, perhaps they do not forget, but simply cannot distinguish it from the variety of facts, events and versions. For this reason, we have adopted such a plan: to present the true chronology, occasionally flavoring it with reasoning. Maybe someday we will add more of these considerations and write a more convincing book.

Actually, there are different types of scientists. Some are spread out in detail and are proud of it. Most of them. But scientists are

needed and are encountered - synthesizers who are able to collect a lot of heterogeneous facts into a single and beautiful picture.

Likewise, most of our readers are well prepared for the generally accepted story and it is difficult to convince them. Retraining is always more difficult than teaching from scratch. For every phrase they have a bunch of arguments against. However, all these arguments "against" are easily broken by our counterarguments, just have the patience to read or think it out yourself.

One of the basic postulates is that the True History of Russia is somewhere hidden in famous scriptures and books. Only the names are different and the context is different. And the name Russia is not mentioned there. But, perhaps, all this is somehow encrypted with the possibility of recovery. So we will restore it.

The origin of the name of Russia. Aust-Razia.

All names are born from the superposition of many circumstances and related names. The new name is, as it were, the resultant of all previous names and terms.

1) The word Rus is of the same origin with the German word Reich and mean the same thing. Russia is the remnants after the Gauls left for Western Europe. We know very well that many Russian state words were taken from the German language. Such as province, department, military ranks, etc. Also close is the Polish name RUH.

2) Alexander Pyzhikov's version of what RA meant in Old Slavic "light" is also good. A bright place.

The truth can always be restored, Sherlock Holmes proved it to us. By some elusive hairs, pieces of paper, footprints, fingerprints, prints written on an underlay sheet, smells, logical chains, logical absurdities, strange coincidences of events separated in time or space, accidentally heard words and accidentally seen glances. And even more so the historical truth. When the spectrum of material artifacts is huge and it is physically impossible to fake everything.

3) Origin from Austrasia.

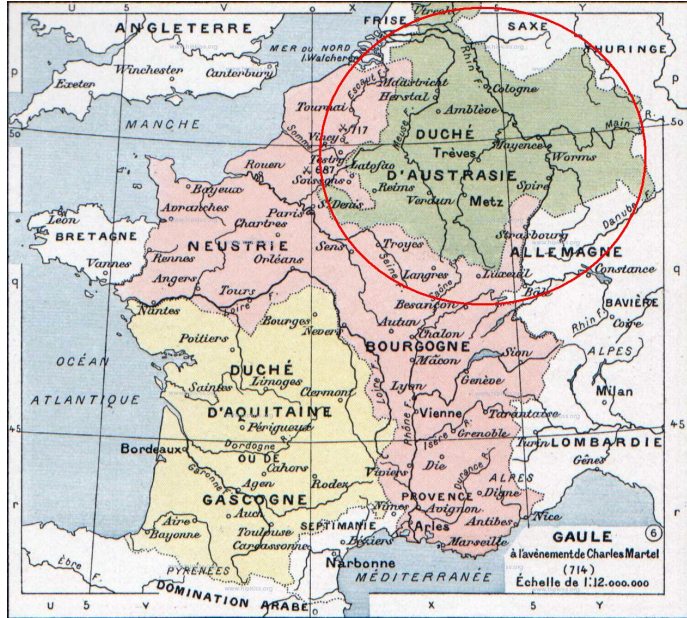

Figure 20. Frankish Empire, 800s.

In the upper right corner in green - Austrasia.

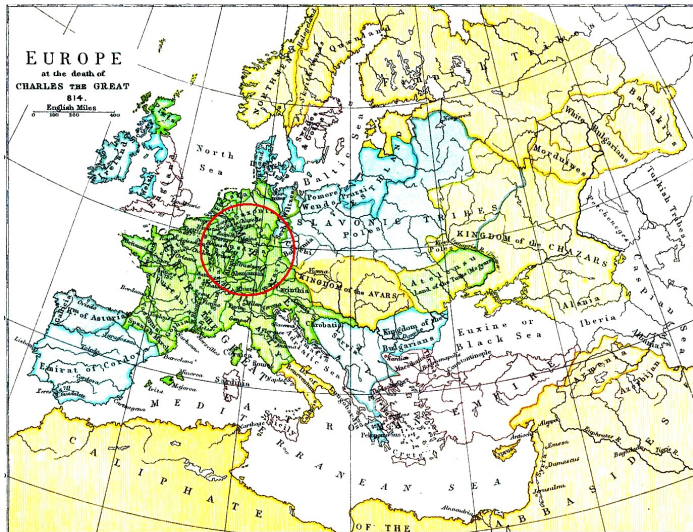

Figure 21. French Empire 814
and surrounding areas.

Slavic territories (Czech Bohemia and Serbia) are directly adjacent to Austrasia.

The name of the eastern part of the French Empire 5-9 centuries AD: Austrasia. (see Figures 20 and 21). Later, Austria remained on a small part. But where did Rasia go ?! Or is only Asia left, but this is the center of Europe ?! And what was it?

The name Austrasia itself (the northeastern part of the French Empire, Fig. 20, Fig. 21) was not invented by the Slavs, it is possible that it is already distorted, carries the word Russia: Aust-Rasia = Aust-Russia.

Russia - it was, as it were, a unifying name for all Eastern European (Slavic) states and peoples subordinate to the king of Austrasia. Just as we now call Siberia, many Asian regions and peoples living on them.

The name Austrasia (for comparison: Austria-Ralia, P-Russia) is interpreted not as Austria-Asia (what kind of Asia can there be in Europe? Russia. This conclusion is confirmed by the cartography of that time.

The ancient map (see Figures 8, 9) shows that the Slavic territories directly bordered on the French Empire. And given that this, perhaps, is already a distorted map, deliberately distorted by Western historians, it can be argued that the Slavic territories not only bordered, but simply were part of the French empire. Or more narrowly: they were part of Austrasia and were subordinate to it. Submitted to all French kings. This is where Napoleon's roots grow. And similarly and Hitler.

4) Note additionally that such considerations have also appeared. They are more romantic in nature, but there is some sense in them.

- Why is our VOSTOK, this is the East. Is WEST for them the West?

- What are the components of the word AUSTRASIA? These are the territories in which the majority of the Slavs lived and now live.

- These two questions allow us to make a hypothesis. The word AUSTRASIA is originally a-WEST-RASIA, here a is an article. That is, already in the 6th century, there was a WESTERN RASIA for the French. So it is, if you look at the map of RASIA. EVERYTHING TO THE EAST OF FRANCE WAS RASIA IN THE 6TH CENTURY.

And the word ASIA later came from the word RAZIA.

And the word RUSSIA later came from the word RAZIA.

It is possible that the word RISE (enemy) - comes from the same place. It is possible that the city of RYAZAN comes from there. It is possible that the ancient Stepan Razin comes from the same place.

And this is confirmed by studies of haplogroups (see figures). Austria and Germany, Sweden and Norway up to 25% are Slavic peoples. Not to mention Poland or the Czech Republic or Slovakia. The French conquered part of the Slavic territories (or somehow subjugated them) and called them Western Razia = a-West-Razia = Austrasia.

And then discrepancies began, because different frames of reference. The words East and West are primordial Russian words, according to the Rising and Falling of the sun. But Western guys borrowed these words from us, and got confused, where what and how. And they took a couple of similar derivative words from the same word East: West and Ost. This Western part of Russia was in the East for them, and for the Russians - in the West.

Later, politically purposefully, there was a consistent separation from the huge RASIA, first East Germany, then Prussia, then Austria, then Poland, the Czech Republic, etc. The alphabets were deliberately changed by agents of influence, as part of the "reforms", and in this way something happened that continues to this day. Look at the remnants of the great Yugoslavia.

Take, read the texts in Polish or Czech. With the smallest skill, they are read (and listened to) as easily as Ukrainian. We, all Slavs, have a common Old Russian language, Sanskrit = San Tsarit. In the past, we are a united Slavic country of Austrasia.

Again. There is no single reason for the emergence of a particular name. These names were born in competition and in agreement with many other names.

A little about playing cards.

Here are the playing cards. What is depicted on them? - This is Tsarity. Cards = Tsarits. This is the family of a tsar, one of the first (French?) Tsars. The king himself is the Joker. Joker = E-King (e - article). Further, the king is originally a king, that is, belonging to the royal family, one of the men. This is also confirmed by the names of the French kings: Carloman, Carolingians. For comparison: the tsaril is similar in structure to the Russian khakhal. Further, the lady is clear, a wife or one of the wives. Jack = Brother. From here comes the Russian pull, by pull. One of the suits is baptism, that is, just at this time, the baptism gesture is introduced into the tradition (see below!), But the cards do not even smell like Jesus and Christianity (!). Baptism means the small stature of the Joker and, perhaps, the king. That is, the French are the cross suit. Crest = francs. Further, the suit of hearts means Tsarev, that is, most likely - the Slavs. What the rest of the card suits mean is a separate topic. It is possible that the peaks are similar to hearts, only black (bad) and with a peak stuck into the heart on top - these are the Khazars behind the Slavs. Tambourines are still without hypotheses. Maybe something African, Negro? From the French colonies?

Origin of the name Moscow

© Wipe your eyes, Slavs. What we are looking for, as always, lies in plain sight. Just got used to it. It has survived. Cities, fortresses, pyramids are crumbling, and linguistics reliably keeps the

antiquity in itself. Go to Moscow. Exit the metro closer to Red Square. This is the heart of Russia and Moscow itself. For example, from the Okhotny Ryad metro station. This is the most central metro station in Moscow. From it, people go to Red Square, to the Kremlin, to GUM. Face the Kremlin. Before you is the Kremlin, Manezhnaya Square. The Red Square.

Figure 22. © Dubinyansky.

And which street goes to the right (left-down in the picture), to the Manege itself and the Lenin Library? That's right, MOSS. This is one of the main streets of Moscow. And in ancient times there was generally the main street of Moscow. And even deeper in antiquity, the entire Kremlin was the Slavic (!) Village of Mokhovka. Or maybe the village of Mokhovo. Or maybe the fortress Mokhovo. As we all know, the texts in Russia were introduced with a great delay in relation to the West. And this name Mokhovo or Mokhovka was reprinted a hundred times in the West, before it returned to Russia in the form of the stably fixed name MOSCOW. Recall that our history itself was first written in the West by the German historians Scaliger and Pettavius. In foreign correspondence (sets of fonts), either the Russian letter X was perceived as the Latin IKS, and Mokhovo

became Moksovo. Or there was a rearrangement between the letters K and B. Type MOHOQUE became MOHOQUE (in the west they do not understand our linguistics, Mohokwa, well, it means Mohokwa). Read modern comments on social networks, where adjacent letters are often rearranged. In any case, the name is very close to the current MOSCOW. And the fact that this is not an invention, so go and walk along Mokhovaya. This street has always been. Although it is possible that once the next fools in power could rename it.

Perhaps there was the village of Mokhovo. Which was once read instead of the Russian letter X by the Latin IKS. Much like Mexico with its capital Mexico City. So from the village of Mokhovo (or Mokhovka) became Moscow.

Regarding the statement that the name Moscow came from the word Mosque, this also makes sense. Here are the translations: Mosque - mosque (English) - moskee (African) - mosg (Welsh) - mesquita (Galician) - moske (Dan.) - mosc (Irish) - moska (Icelandic) - mosque (Zulu) - mezquita (Spanish) - moschea (Italian) - mosque (Latin) - Moschee (German) - moskee (Dutch) - moské (Norwegian) - moschee (Romanian) - moskeija (Fin.) - mosquée (French) - moské (Swedish) - moskeo (Esperanto) - mosque (shona) - moske (Hawaiian) - moske (Haiti) - mosg (Gaelic) - moskee (West Frisian). But we still need to check what has arisen earlier. Maybe the Mosque originated from Moscow.

Regarding the fact that Moscow is Swamp Water, here are the translations: Rotten water - rotten water (English) - morsches Wasser (German) - eau pourrie (French) - mätä vesi (Fin.) - råddnet vand (Dats.) - agua podrida (Spanish) - råttent vann (Norwegian) - ruttet vatten (Swedish) - rotið vatn (Icelandic). That is, no connection.

The Chebarkul meteorite suggested the name of ancient Russia.

В самом деле, откуда взялось название Чебаркуль? Да ясно откуда.

ЧЕБАРКУЛЬ = ХАБЕР - ЦАРИЯ.

Ну и дальше стали копать в этом направлении. И оказалось, подтверждений выше крыши.

Слова подтверждающие название древней Славянской Руси, дошедшей до Индии:

ЦАР-ХАБЕРИЯ или наоборот, ХАБЕР-ЦАРИЯ и все вариации от этого. Так называлась наша страна до того, как стала Русью или Россией.

Сначала самые яркие и утверждающие:

Швейцария (гео) - Хавер-Цария

КурШевель (гео) - Царь-Хавел

уСолье-Сибирское (гео) - Царь-Хаберия

Why do Russian soldiers shout Hurray when attacking?

Who can say why the Russians shout Hurray when attacking? There are, of course, many versions. But they are not convincing. I think the most convincing version is this. URA means U RAZH! That is, IN THE RAZH. The Russians have to go berserk to fight. Because they have a high threshold for aggressive excitability, they are kind.

The Slavic chromosome R1a, which affects the threshold of male aggression, was good in hand-to-hand combat, as evidenced by the current victories of Fedor Emelianenko, the Klitschko brothers, Nikolai Valuev and a host of other strength athletes. The Y chromosome R1a determines the threshold level of mutual aggression, after which men enter into fights. And the Slavic chromosome was at a higher level of this threshold. That is, if Caucasians grab knives after two or three words, then Slavic men are less excitable to mutual aggression, and in order to get them mad, they need to be greatly annoyed. And from here there was an opportunity to evolve into Slavic heroes. Precisely Slavic, because only with such a "mature" chromosome R1a, the heroes did not launch their heroic strength for much in vain and did not conflict with the team. Roughly speaking, the heroes in all other haplogroups are not adequately aggressive and quickly come into

conflict with the collective and their entire collective had to be removed. But the Slavic heroes, a kind of mighty good-natured, they allow both to make fun of themselves, and to tease and live peacefully next to them to any small thing. This is confirmed in all epics and later literary works. This moment is also important in family life. The woman was not afraid of the Slavic hero - the man that he would knock her. And he is still not afraid. If anyone knocks or oppresses a woman in Russia, it is other haplogroups from our territory, not R1a. We also see this advantage of the Slavic hero in power sports.

One version about Genghis Khan.

Haplogroup of Genghis Khan.

In recent decades, research on population genetics has expanded widely. It is known that all of humanity is divided into haplogroups according to the type of the Y-chromosome, transmitted to descendants through the direct male line, and mt-DNA, transmitted through the direct female line (but also present in men). These studies, carried out among the peoples of Central Asia, revealed, in particular, an interesting fact of the wide distribution there of several clades (branches) of the Y-chromosomal haplogroup C. With a high probability, it is associated with the conquest of these territories and extensive migrations of the population. Three clusters of this haplogroup, to which 70% of the examined representatives of the population of Central Asia belong, arose, according to the "molecular clock", in the period between 700 and 1300. AD That is, in the era of intensive migration of the Turks to the west, including the period of the "Mongol-Tatar" conquests.

At the same time, among scientists there is no consensus about which haplogroup was the carrier of Genghis Khan himself. Although, it would seem, this can be established, since there are many clans who consider themselves to be direct descendants of Genghis Khan. But the fact of the matter is that they belong to

slightly different genetic clusters. Most of all supporters of the hypothesis that this is one of the hoards of haplogroup C3.

The relative majority of the population of Central Asia belongs to various clusters of haplogroup C3. The largest number of their carriers was found among the Hazara people living in the interior regions of Afghanistan - up to 40%. The Hazaras are considered in Afghanistan to be the direct descendants of the conquerors who came with Genghis Khan. It can be stated that in this case the ancient legends do not lie. 30% of carriers of this Y-chromosome among the Chinese of Inner Mongolia (autonomous region of the PRC), 25% - among the Mongols of Inner Mongolia, 20% - among the Mongols of the Mongolian Republic, Kazakhs and Uighurs of the PRC, about 10% - among the Kazakhs of Kazakhstan, Kyrgyz, Uzbeks, Chinese in the north of the PRC.

Confirmations. Abkhazia - Khazaria. Also here: Kazakhstan. Abkhazia.

Ten years ago, we hypothesized that CHINGIZ-KHAN means SYNAGOGA-KHAN. Why? Yes, it is quite a natural hypothesis, given that the Jews are always in power in the majority and in fact they create politics. By Jews, I do not mean a nation, but a purely Jewish sign of cunning and intelligence. Jews have long understood themselves and spiritual institutions visit and support the corresponding ones. Therefore, for some centuries they have been building and visiting synagogues. And one religious Jewish leader turned out to be so cunning that he subjugated many peoples and territories and became CHINGIZ-KHAN. Quite a workable hypothesis. There were no contradictions. Up to this day.

About six months ago, we put forward a hypothesis on a related topic and published on Zen that PECHENEGI were really CHECHENO-INGUSHI. The word PECHENEGI is similar to CHECHE-INGI. Linguistically quite appropriate. Historically, too. According to the mentality of the peoples, too. So the hypothesis is also quite workable. And there are no historical refutations either.

But recently it suddenly dawned on me. CHINGIZ-KHAN is CHECHE-ING-KHAN! The generality of linguistics. Commonality of mentality. And the rule of the investigator: if you take the right path of investigation, then all the circumstances begin to line up in one chain. Genghis Khan is a Chechen leader, and as a Chechen-Ingush he went down in history. The border between Khazaria and Muscovy, published by us on Zen recently, runs from Voronezh (Haver-Inga?) Further Mordva - Chuvashia - Tataria - Bashkiria. In Mordva, Chuvashia and Tataria, the percentage of the Chechen-Ingush haplogroup J is very high: 16%. Moreover, in modern Russia there is a powerful Chechen criminal diaspora. And from the very beginning of the dashing 90s, the Chechen mafia took into its own hands both fake advice notes, according to which they cashed huge sums in Sberbank, and the arms trade that Russian scum from army warehouses sold to it. And from which thousands of young Slavic guys died.

Figure 23. Photo taken from the free internet

Well, having chosen the right path, we immediately begin to include other events in one chain. And one of these events is the name of the state of CZECH REPUBLIC. Perhaps the Czech Republic was the extreme western point of the conquests of Khazaria (see map above). And the name Czechia does not come from the epic Chech, but from a very real Chechen, Genghis Khan. Probably, if you rummage through the Ukrainian names,

you can find other names confirming the connection with Chechnya.

The conquests of Genghis Khan did not go from east to west, as historians thought for us, but from west to east, beaten routes along which the Slavic conquerors passed to India a thousand years earlier. But to the west, Chingiz Khan apparently did not allow the Western Europeans to break through. They were also very, very aggressive and merciless. You will not clear up. It is much easier to conquer the Kazakhs and Uzbeks.

History moves in a spiral. And as Kievan Rus paid tribute to Khazaria (Cheche-ingam) 800 years ago, so today the Slavic part of Russia pays and supports Cheche-ingam. And the weak attempt of the Slavs under the USSR to get rid of the Cheche-Ing and deport them to Kazakhstan ended with a strong blow back in the dashing 90s because of the weak Slavic ruler Gorbachev. Who hoped for the support of the insidious west.

Well, and the word IGO itself, does it not seem to the reader that it rhymes well with the word CHECHE-INGI? One to one, grain to grain ... Perhaps, originally IGO was pronounced as INGO. And for this word VORONEZH = VORO-INGO was named. That is, in a literal, not convoluted sense, IGO OF THIEFS. Voronezh was one of the northern border outposts of Khazaria. Between Muscovy and Khazaria. By the way, this ancient THIEF YAGO was again reproduced under Putin.

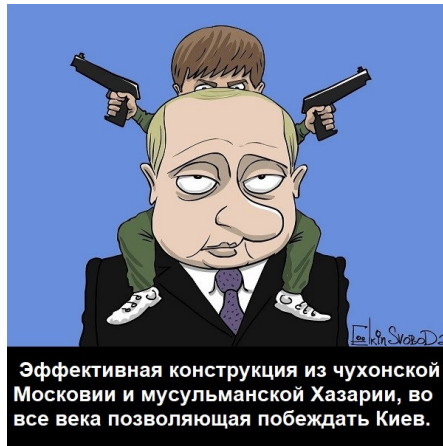

Figure 24. Photo taken from the free internet.

So which hypothesis is more correct, that CHINGIZ-KHAN is SYNAGOGA-KHAN or that CHINGIZ-KHAN is CHECHE-ING-KHAN? Hard to say. As always, the resultant term is fixed in history. And it is likely that the word SYNAGOGA itself came later from the same word CHECHE-INGI. That is, the name of the synagogue is directly related to Genghis Khan. And only later, historians turned everything upside down. They wrote before, I don't remember the references that the Jews realized themselves as a nation, as a special people, as a result of the successes of Khazaria, being in power in Khazaria. There the Jews felt the strength. The power of the mind over the muscles. That is, just as a result of the success of the CHECHE-INGOV. This is where the Jewish temples originated - SYNAGOGUES - CHECHE-INGI. And the whole so-called Jewish ancient history began in Khazaria. For example, such a Hebrew word BIBLIA comes from a completely Russian word BYVALYA (experienced, remember BYLINA). With such a dashing old Russian spelling, a collection of worldly wisdom and legends.

Moreover, it is quite possible that Khazaria was formerly Nazarius, which is where Jesus Nazarene came from. But that's a completely different story.

Why Gagarin and not Titov?

We are presented with round, wide faces like traditional Russian faces. Meanwhile, the Yakuts and Chinese have round wide faces.

We are shown black and told that it is white. And we believe.

In our country, the border between the Slavs and the Great Russians passes invisibly, between the south and the north. She is in the air. She pervades the atmosphere.

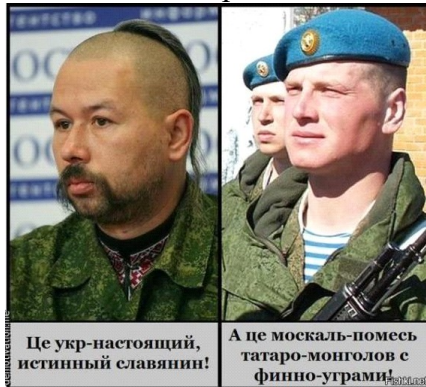

Figure 25. Photo taken from the free internet.

Out of the two faces in the picture, who would you send as astronaut # 1? - Of course the one on the right! He has a round Russian face. And the one on the left looks like a Turk.

This is approximately how the Khrushchev elite and the chubby Khrushchev himself judged. And everyone who was in power there. To our round Russian face! They were together in the cosmonaut corps. Both are worthy. The Great Russian Gagarin was chosen. And the Slav Titov was pushed into the background. Meanwhile, the Great Russians received a round face from the Yakuts. And Siberia will soon be Chinese.

Thus, in space, the Slavs were humiliated. And then followed by the complete squeezing out of the Western Slavs from Russia. Ukrainians and Belarusians. For the sake of 30 million chubby Great Russians.

What will happen next? And then it will be, no doubt, a lot of fun. There are still many Slavs in Russia, there will be 90 million.

Then the South Slavs will come to their senses. The Kuban will come to its senses, the center will come to its senses, Altai and the Urals will come to their senses. The Far East will come to its senses. Gradually or all at once, they will be squeezed out by the Great Russian Muscovy. The Great Russian Muscovy will remain alone, with the stolen name Russia. With the Russian language stolen from the Slavs. Its only obscene. And with nuclear weapons.

The wonders of linguistics and the Russian future.

Many Soviet and even younger Russian moviegoers are deeply impressed by the dance of Frunzik Mkrtychyan in the film "Prisoner of the Caucasus".

Figure 26. Taken from the free internet.

Some will ask: well, what does linguistics have to do with it? But listen to what Frunzik Mkrtychyan shouted at the beginning of the dance: "Ossey!" Or with a Georgian accent "Assa!" This is a very popular exclamation among many peoples, calling for fun and daring behavior.

And now let us recall the actual film "Assa". It is just about the reckless behavior of the bandits. And this exclamation of dashing guys "Assa!" It carries some kind of sacred meaning. But what ?!

Once, once again translating the English text, I once again came across the following Google translator error:

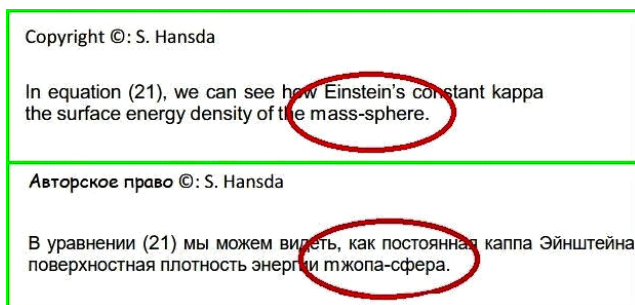

Figure 27.

That is, the English "Ass" is translated as the Russian "ass". Curious, I thought. But look at the dance of Frunzik Mkrtchan, why does he wag in the dance so violently? And this one, booty. And his exclamation at the beginning of "Ossey" means the same thing, priest. That is, this is the dance of the priests. And the daring behavior of young people shouting "Assa" is also the behavior of daring pops.

Well, the final touch. And what kind of linguistics is there? What is the etymology here? A very simple one. In the Russian language there is a direct analogue to the English "Assa", this is the word "Piss". Both words refer to some lower part of the body from which something stands out. And undoubtedly they have a common origin from one ancient word.

And if you look at other languages, we will find many related words. ASSENIZER - a person who removes waste products.

Looking through the translations of the word "priest," I was surprised to find the Greek translation: priest = Gáidaros. So this is where such a famous surname Gaidar comes from ...

Italian booty = Culo. This is our friend and beloved KAL.

Latin booty = asinus. It's a coincidence.

German booty = Arsch. Close. I remembered the surname Arashukov.

Dutch Booty = Ass.

Norwegian Booty = Ass.

Serbian priest = Ass.

Tajik priest = hari (!). This is where the Russian word "kharya" comes from.

French booty = Cul. The same feces again.

Well, Ukrainian priest = dupa. This is where the Russian word "hollow" comes from.

I did not look at all the countries. But I think there are still many interesting finds there. I leave it to the lovers of linguistics.

Well, someone will ask, what does the Russian future have to do with it ?! - And it is precisely predicted in the film "Assa". It is also prompted by the name of the first prime minister leading the country into the market economy Gáidaros. I think everything is clear to everyone. But I wonder what word is etymologically connected with the surname Chubais? Maybe in a foreign language it is Arctic fox?

Russian commandments. For lovers of linguistics.

21. НЕ РАСКРЫВАЙСЯ. (Как Путин, о своих целях и планах).

Вот почему Путин так сильно хочет РЫВКА...

Linguistic aspects of the settlement of the Slavs.

Linguistics goes hand in hand with history. To understand history, one must understand linguistics, and to understand linguistics, one must understand history, the True History, and not the bullshit that the Judeo-Germanic historians have invented.

Russians are a special people. They take too long to harness. And after that they try to drive too fast. As a result, they often find themselves in roadside ditches, a laughing stock to Western observers.

Maybe in a separate article, or maybe as a consequence of the above, there is the thesis that we do not like deep preliminary studies, but hope for the Russian "maybe". Embossed expressions of the Russian "maybe" are such pearls as "they wanted the best, but they got it as always" and "to catch a random phrase and accept it as an inviolable criminal law".

That's in science. Freedom lasted for several years, the abolition of censorship. And that's all, we introduced the review of all publications. This is, as it were, in line with the "fight against alternatives." But in fact - in line with obscurantism and obscurantism. The bastards again settled down in the academy, packed out of friendship, through connections, through extra-

scientific channels, and build colliders for themselves, declare themselves the forefront of science, and declare everyone else to be amateurs. But if they just announced it would not be so, they hound, strangle, ban, destroy. It's a pity they banned bonfires. Alternatives would burn with a bright fire. And along with them are real scientists.

So it is in linguistics. Crooks thrive. Here's a fresh example from a well-known academician. Italian language. The author claims that there is no connection between the words:

- cervi (se = che, worms) "deer"

- certi (devils) "some"

- This is his level of thinking.

- And here is our level.

- cervi (se = che) - originally, very ancient - tsar. Compare ours: a cow. So, the king - a cow - means with a crown on his head, or with horns. That is, the Italian worms (deer) is equal to the Russian cow, which is quite obvious from their appearance, from their horns.

- certi 'some' - originally, very ancient - kings. This is reflected in the playing cards. Hence the name itself: cards. That is, the kings are the chosen ones, which means that the kings = some. This is where the legs grow from. Both go back to the Tsar, to the royal family or species.

For more information on playing cards, see a separate chapter.

But, alas, it is impossible to fight the system if you are outside the system. Only being inside the system, having gone through all the stages (like Gorbachev in the CPSU), can one reach the very top, and then betray and destroy this system. Only become a dragon yourself to defeat another dragon.

Another example of complete insanity, when our primordially Russian is crushed under foreignism. There is such a stone, a mineral of red color, called CERDOLIK. A scholarly source, the Cyril and Methodius encyclopedia, writes about the origin of the name of this stone. The name SERDOLIK comes from the ancient city of SARDIX, which was once the capital of Ancient Lydia ...

not far from the Turkish coast of the Aegean Sea. Isn't it idiocy to compose such a thing about a word consisting of two Russian words SERDO and LIKE, that is, having a HEART LIKE, that is, simply red ?! HEART - an organ located first in the MIDDLE of the body - the Russian word. And secondly, HEART = TSARID for its royal role in the body. LIK - face - are there any doubts about the Russianness of this word?

One more word: CATORGA. Again in the encyclopedia some Greek word is attracted. But there is an obvious Russian word STRUG. It was to them that the condemned were sent, chained to the oars. (Like Greek galleys). Hence, write this word in Latin, and it turns out KATORGA.

Another quote from somewhere: "I drive out pain, sadness" - this is how the Greek word is supposedly translated, from which our word BATH comes from. - So this is E @ ANYa, the Russian word and purpose - to wash and, while clean, have sex. Although, probably, the Greek women were good at driving out both pain and sadness in these rooms.

Does anyone remember the Hunniks?

We have long understood that our history is reversed and is greatly extended. But we still do not fully know how it really was. We have several clues (not yet published) proving the inversion of history. Here is one of those leads. Foolish things (sorry, they got it, I can't call them otherwise) will immediately yell, they say, a coincidence! Is it a coincidence? I do not think.

In the days of our childhood (late 50s), a cart sometimes drove through the village, with rags applied in a mountain. Gunnik has arrived! - the children shouted and dragged from the house all sorts of old unnecessary rags, torn felt boots, shoes. Gunnik took everything and gave small toys for it. Clay whistles; balls filled with sawdust and rubber bands; plastic harmonicas; etc. Penny toys for penny goonies.

Figure 28. Gunnik.

Guni, in our opinion, in a village (Lipetsk region) - that was the name of the old clothes. Dressed in gooney - talked about the poor. And those who collected gunis in the villages were called hunniks. Or, if in the city, then rag-pickers or junk-men. Today and then we were intensely weaned away from our history, we have other stories about this. Forced to talk culturally. For example, from somewhere a soft sign has long been drawn in the words vverbx, thursday and the like. This is someone's ancient, outgoing dialect.

And finally, about the connection with history. Who were the Huns? But according to these Hunniks and Gunas, it is not difficult to restore them. They rode in a crowd on horse carts through the Slavic villages, hooligans, robbed, killed. And the colleagues of the Hunniks were accomplices, co-Hunniks = Tsi-Hunniks = Gypsies. Romanian gypsies are the remnants of the Huns. Can you smell history? It pervades our ancient Slavic language everywhere, which was appropriated by the Huns who came from the north and east. Which even changed the name of our Slavic country. Now, instead of Russia, Russia has become.

Moreover. Let us dare to assume that the Slavs have a small branch of memory, into which everything that raises doubts, everything that can be forgotten after centuries is added. It was in this branch that the word guni was put aside. To be remembered. And it came in handy, we remembered.

The emergence of the word "Tatars".

<http://rateh.ru/maski-mongolov>

If we look at the cards, we will see the true spelling of the word - "Tartary", "Tartarie", "Tartaria", Tartariae, Tartares, Tartarian. About Tartaria, tartars, moguls, moguls, you can see and read in more detail on the PischaR website.

Ye, not Tatars, but Tartars. Yes, exactly the TARTARS. And this people lived on the territory of Great Tartary, that's why they called them that!

This is what Nikolai Levashov writes in his article "The Hidden History of Russia. Part 1":

"... The name of Tartary has nothing to do with the name of the Turkic tribes. When foreigners asked the inhabitants of this country about who they were, their answer was: "We are the children of Tarkh and Tara" - brother and sister who, according to the ancient Slavs, were the guardians of the Russian land (Goddess Tara is the patroness of Nature and her older brother Tarkh - May God be the keeper of the ancient Great Wisdom) ". The word Tartaria comes from the confluence of the words Tarkh and Tara. And the fact that later the letter "R" from the words of Tartaria and Tartar was thrown out of the spelling and pronunciation of the word, suggests that someone needed it. In order to erase from the consciousness of the people themselves the memory of the country, which was truly called the Great Tartary, and of the people themselves - the Tartars. And for several centuries the scribes of history have almost succeeded. Almost.

So it turns out that in one case the Slavs were called Mughals, in the other Tartars. But never - "Mongol-Tatars"! And the words "Mongols" and "Tatars" are already a modern translation of would-be historians from science. And if you take the original of the surviving artifact and the translation, you can see for yourself how "Tartars" turn into "Tatars", and "Mughals" into "Mongols".

However, the authors of this book believe that Tarkh and Tara are fiction. Tartary is the kings of kings.

Slavic was the Pope. The Tatar-Mongols brought a father.

Where did the term "Mongols" come from?

<http://rateh.ru/maski-mongolov>

In 1817, Christian Kruse published an Atlas on European history (“Atlas and tables for reviewing the history of all European lands and states from their first population to our times”), where he first introduced the term “Mongol-Tatar yoke” into scientific circulation (in Russian the language of this work was translated in 1845).

In Russia, the term "Mongol-Tatars" was introduced into circulation by the famous historian P. N. Naumov in 1823. And only from that time, from the 19th century, it appeared in textbooks and scientific articles. In all the surviving sources, be it maps, chronicles, dictionaries, of course, there are no "Mongol-Tatars". Studying the etymology of the word "Mongolo-Tatars", we see that this term was artificially invented and introduced into use much later than the events of the "Mongol-Tatar yoke". The term is artificial, but the meaning is quite real. This is a significant part of the Mongoloid genetics among the Finno-Ugric peoples. And now for more details.

Looking at the maps and illustrations of the atlases that have come down to us, we will come across the words MOGOL, MOGUL! Please note, without the letter "N".

The word "Mogul" is of Greek origin and means "Great" in translation. Better yet, POWERFUL. That is how the Great Ones called us, the Slavs, the Rus, some Europeans, Arabs, Chinese, Japanese on their maps, on engravings and other surviving artifacts. And those whom historians call Mongols call themselves Khalkhi or Khalkhu, Oirats, etc. But not by the Mongols. Yes, and historians began to call them Mongols only in the XX century.

Well, then something happened that always happens. There was a confusion between the MONGOLS = MAN-GALLI = GERMANIANS (who lived near China) and the MOGOLS = GREAT (who lived near the Urals), which is from a completely different opera. And then everything got confused in the Oblonskys' house.

Moreover. Here, the pathology of the Great Russians, who are great in everything, that is, the Mughals, just got out.

It should be remembered again that each term is fixed in the event that it is the resultant of many circumstances. Among the many circumstances, we note that in the Tatar-Mongol peoples there really are Mongoloid genes and in a fair amount. Therefore, the word Mongols stuck to the word Tatars.

Kings with small stature.

The True History is contained somewhere, the author believes that it was precisely this era, the era of the Slavs entering Austrasia, that was imprinted in the layer of the Russian language associated with the word Tsar in its negative meanings. This is confirmed by the following facts and reasoning.

Figure 29.

The analysis given in the article "The TsAR word of the Russian language" shows that there are a lot of words with the root TsAR in the Russian language. This indicates that the word King is much older than the 6th century AD. It is many hundreds of years old, maybe a thousand years, and maybe two, three, four thousand years.

The word TsAR itself in Russian appears in the form of various modifications. Such as words with the root KUR (city of Kursk), CHUR (chur me), and many other varieties. Therefore, it is very

likely that the Western words KOROL and KARL have already become derived from the ancient Slavic word TSAR.

Thus, it was concluded that part of the linguistic layer of the Russian language with negative derivatives from the root TSAR was formed around 500 - 900 AD, mainly during the reign of the French Carolingians = Merovingians in Europe. Most of the words indicate the small stature of the king.

In the history of the contact of the Slavs with Australasia, the role of the small stature of the king was played by Pepin - Short, and possibly other short men of this kind. For example, Charlemagne was also a short man. Maybe the Great added hyperbole to him because of this, for humor. The part of the words that indicates the smallness of the subject (see the table below) was formed precisely in the era of Pepin Korotkiy and his descendants. Example: Dwarf = Tsar Lik; other words: shalik, obkarnat, etc. Under the KING, at the birth of many ancient words - "neologisms", it meant LITTLE, FAT, EVIL, SCARLET, HIGHLY KING. That is, with almost all the usual, including the current attributes of the kings. So he apparently was. But he was also a KING. Who was that? Pepin Short? Charlemagne? Or one of their descendants or ancestors? Therefore, along with the prevailing sublime meanings of derivatives and variations of the word TsAR, sometimes words arose that carried a disrespectful meaning, negative and even hostile. Like shit, or even sh * t. Or corruption, crooked, crisis. Or culture (return) but right there a stump (a short part of a severed limb), or a nag. Or grunt, grunt, grunt, impudent, chaldean, sycophant, freebie, lackey, boor, blaspheme, bully, mischief, sharper. Or in the female version: kurva = tsarova, slut, rogue, whore, or chickens = kings (i.e. scallops like crowns on the head), rat, crime. The entire list is shown below.

Derived from the word TSAR, which have a negative meaning.

Underlined	Underlined	Malice,
-------------------	-------------------	----------------

small size		disgust		meanness
карлик	шкалик	кретин	чёрт	агрессивный
короткий	мизер	курва	шлюха	акула

P.S. It is curious that it is precisely the words from this table that are most popular among modern youth ...

On the question of the emergence of Christianity.

An important logical chain. The following emergence of Christianity and the gesture of Baptism is very plausible. In the era of Pepin the Short or his father or one of the closest descendants, small in stature, the Baptism gesture arose. Initially, in all likelihood, it had no religious or Christian meaning. Jesus was not born yet. Jesus was not born until about 1000 AD, and this also fits well with the new chronology of events (see below).

And later Western historians will add another 1000 years to Jesus. The very gesture of Baptism originally had the meaning of reverence for the king - a dwarf, admiration for him, and perhaps even a criminal connotation (cutting off the head, equalizing in growth). And the accompanying bowing gesture had the same meaning of bowing before the little king, reducing one's height before the king. This gesture, both of these gestures (baptism plus bow) emphasized that growth does not matter for the greatness of the king. The first movement during baptism, from the forehead to the abdomen, showed normal, high growth, and the second from shoulder to shoulder - reduced growth (or cutting off the head). And both heights were, as it were, equated. Or the second part (from shoulder to shoulder) struck across the neck. That's all. This gesture is similar to the type of the current prison gesture "will not see the century" with an imitation of tooth extraction and striking on the neck (see the film "High Security Vacation"). But in the future, this gesture of baptism seemed to take root for all kings and even later successfully fit into the religious system of Christianity.

It is not excluded that in some future, and this is where everything is going now, the gesture "the age of the will not to see" will also become a religious gesture in the future church.

A couple of years ago, a Western-made film about the famous shroud was shown on the Culture channel. Which, allegedly, covered the deceased Christ. And what is curious, if it was an oversight of the censors, if it was for another reason, but the film reported that a scientific analysis of the antiquity of this shroud gives it an age of about (not earlier than) 1000 AD. The Westerners themselves filmed and showed them, no one pulled them by the tongue.

At the end of the reign of the Carolingian-Merovingian dynasty, a current (of course, with a Jewish core, like all subsequent Christianity) of the tsarists arose. These were those who knew or remembered the Carolingians, read, understood their wisdom and closeness of psychology. These are mainly, of course, Jews and

half-breeds, friends and relatives of the Jews. They took the baptismal gesture as a hallmark at that time. (For comparison: the gesture of the German fascists, "Heil!", Which also means a derivative of the word "Tsar", which, on the contrary, kind of exalts the Germans, makes them higher than other peoples, which is shown with a hand up and down). This is how John the Baptist appeared. Perhaps there was someone before him. But all this happened in temporary proximity to the Carolingians - Merovingians. Then his followers appeared, and in different countries and regions of the French empire. These followers were also called Tsarists, that is, supporters and followers of the Tsar - the Dwarf. The meaning of this trend, in our assumption, was that it does not matter how tall you are, but what kind of brain is important.

And around the year 1000 Jesus was born. But then the current countdown of the years was not yet. He became one of the Tsarists and followers of the Baptist = Tsarist and he was named Jesus - Tsarist. The tsarists were all supporters of the French tsars - the Carolingians.

(Further, the authors themselves do not really believe what has been said, but ...) Jesus was born, probably in Khazaria. Or rather, in Nazaria. Where did his nickname come from: Jesus the Nazarene. His whole life was spent in Khazaria or close to it. All biblical events took place there too. An indirect confirmation of this is also the existence of a huge number of Russians with the surname Nazarov (for example, the outstanding actor Yuri Nazarov). But a very small number of surnames with a root from Khazaria, if any. Is that the Ukrainian Prime Minister Azarov. Perhaps Khazaria was originally Nazaria. Later the letter jumped.

Jesus had information about Europe, about the King. Maybe they told him orally, maybe some texts have reached. That is, some kind of connection with the West was maintained and news was transmitted. When Khazaria was defeated by the Kiev Rus, they were governors in Khazaria, and at this time all important episodes from the life of Jesus, reflected in the Gospels, took

place. Including Pontius Pilate was a Slav, not an Italian, and all the characters were Russians. It is possible (Fomenko - Nosovsky) that Kazan = Execution. That is, the execution of Christ. However, it is possible that Kazan = Khazan. It is also possible that the entire biblical Old Testament is the history of the wars between Western Europe and Eastern Europe, transferred to Israel. For example, Samaria in ancient Israel and Samara in Russia, where does such a coincidence come from along with those already mentioned?

This is possible and became the motivation for distorting history with very far-reaching plans: to avenge Slavic Russia for what he had done to Christ. Revenge is cruel. But this is discussed in another chapter.

Later this addition Tsarist to the name lost the original meaning of the Tsarist and was transformed (when the letters jumped) into the obscure Christ. And all the supporters of the tsarists became Christians. Apparently this happened when Christ became a bogeyman for a campaign against the Slavs, for Christianization.

Moreover. The phrase Jesus is Risen makes sense not to rise from the dead, but to Reign. Indeed, Jesus reigned over all Christians. Supposedly the resurrection of Jesus is his accession in the minds of believers. And his work, the kingdom of reason, it reigned over all mankind.

After the Carolingian dynasty, it became a tradition to keep a dwarf - a jester at the royal court. This tribute to the past and tradition even reached Russia, where dwarfs were kept under some tsars (jester Balakirev). Dwarfs are present in many French royal courts.

Subsequent (after the execution of Jesus) scribes of history and religious books decided to organize various customs, political trends and historical writings. To facilitate their task, for a far-reaching distortion of history in order to obliterate Russian history, as well as to exalt some of the ruling strata, they added 1000 years to history. Whenever possible, they included all known texts, scattering them in time and changing the existing names.

But the main text remained in the history of France. This is the true history of European peoples in the Middle Ages. In turn, Fomenko-Nosovsky believe that the history of France is an inverted history of Russia. And we would have believed Fomenko-Nosovsky, but before our eyes the current complete decline of Russia and it is hard to believe that the West copied something from us.

Many chapters from true European history were added to the Old Testament, renaming the characters and transferring them several millennia into the past. This is noted by Fomenko-Nosovsky, Sergei Shvedov, on the website germanicvs.com and many other modern historians, but forgive those who do not mention (google).

Thus, the biblical David is, according to some modern historians, none other than Charlemagne. Moreover, they are both small in stature. Many of the actions of the characters and the storylines around these people are repeated with great precision. Moreover, Goliath killed by David is none other than (jump of letters) Kings. And in the history of Charlemagne, one of the Merovingians was killed, that is, one of the Tsarevs.

Moreover. It is possible that the reason for the era of shattered skulls is laid out here. See the chapter on this. They threw stones with slings and pierced skulls. The very case when one big truth was scattered in small pieces in different places in history. But the story with the sling has been preserved through the millennia, orally, like the legend of HyperBorea = Haber-Tsarii.

It is possible that all Orthodox churches with large domes are, as it were, a stylized image of a plump, large-headed dwarf, surrounded by the same small, large-headed servants. In memory of the very first dwarf who led the country and in whose honor they began to be baptized.

After all, one cannot openly assert that dwarfs are smarter. What will the ladies say? They love tall, strong people. Society is a very complex system. And we must beat everyone, please everyone, and deceive all the dissatisfied.

These processes of distorting history took place in parallel and in line with the settlement of Kievan Rus by the Finno-Ugric (Tatar-Mongols). This lowered the intellectual level of the country and lowered the rating of Rus among the European peoples. This was reflected in the rewriting of history. Russia was also squeezed out of Europe.

In the same era, 600 - 900 years, the eastern part of Russia was under the influence of Khazaria. Up to the moment when Kievan Rus defeated Khazaria. After that, Russia included the Eastern, Asian and Siberian territories and peoples. And a little later she offered them her religion: Orthodoxy. However, not all Eastern and Asian peoples accepted Orthodoxy, as they were fed up with Khazaria and its predatory morals. Therefore, an alternative religion was created: Islam. Which again, taking into account the jumps of letters, means: Islam = I-Tsarim. And the word Muslims means: Muslims = We are the King of Mana. That is, we ourselves are the king-people, without any icons, without idolatry. And the name Allah is apparently related to the German Alles, which means Everything, Allah = Everything, that is, everything that surrounds us is God. That is why people are not painted in Islam.

The marriages of Russian rulers with European ones are also not accidental. This is a continuation of an ancient tradition.

And what was before, before the Merovingians and before the Carolingians, before the French Austrasia?! Note only for seed:

- Pierre (name, French) = First.
- Pharaoh = Pierun = First (i.e. the most important)
- France = Pieruntia (i.e. Pharaoh's successor)
- Perun = Pierun = Pharaoh.
- Egypt = E-Reigns; (remember G = C)
- Copts = Tsarits
- Cairo = King;
- Sirte (the birthplace of Gaddafi) = Reigns.

- Gaddafi = Kadyrov = Kadar = Kudrin = Kedrov = Khodor = Kudayar = Kudelikha = Sadalsky = Zadornov = Zidane = Ma-Kedonsky. All this is from the glory of Satar = Sir = Tsar.

In short, if all this is true, then we have Egypt and all these pyramids and fa raons - were still earlier than Pepin the Short. And the Chinese wall too.

Weighed down by small stature, many subsequent kings after the Carolingians.

The rulers of Byzantium were called emperors or basileus, but not kings. Although ... If Vasilevs = Vo-Tsarevich, then everything is fine. Then maybe Bucharest = Be-Tsarist, and Bukhara = Be-Tsar ?!

Indeed, these contacts between Russia and Byzantium began after the Merovingian and Carolingian dynasties. Since the 10th century, the emperors of Constantinople have hired Rus and warriors from neighboring barbarian tribes (Finno-Ugric). But the Russian language had already been formed by that time. Byzantine criminal law was largely borrowed from Russia. But that was later, and this is criminal law, but not Russian. Yes, the Russians called the capital of Byzantium Tsaregrad. But this is a purely Russian name, and in Byzantium itself the capital was called, as you know, Constantinople.

By the way, the very word SLAVS probably refers to TSAREGRAD, to the TSAR. That is, SLAVS = TSARS. That is, European people. And only for this reason MOSCOW can be considered the third ROME. And not on the attacks of the Vikings of the Great Russians on TSAREGRAD. And not SLAVS, but SLOVANS.

Here is another example of historical writings that are very hard to believe. Quoted from Wikipedia. "The ruling class of Byzantium is characterized by mobility. At all times, a man from the bottom could break through to power. In some cases, it was even easier for him: for example, there was an opportunity to make a career in the army and earn military glory. For example, Emperor Michael II Travl was an uneducated mercenary, was

sentenced to death by Emperor Leo V the Armenian for rebellion, and his execution was postponed only because of the New Year celebration (802); Vasily I was a peasant, and then a bus driver in the service of a noble nobleman. Roman I Lacapenus was also a native of peasants, Michael IV, before becoming emperor, was a money changer, like one of his brothers. "

And where can such a thing be ??? !!! So that "at all times a man from the bottom could break through to power" ??? - Yes, just historians who misinterpreted history and threw Byzantium 800 extra years, they could not come up with so many believable dynasties, in which there would be family ties, events, relationships, details. Family ties are very difficult. You have to come up with hundreds of names and dates and not get confused. Well, what is it, again to take the French Carolingians and once again rename everyone and stick them in history ?! :))) Therefore, they recruited emperors from the ceiling, sucked them out of their fingers, as if they had "made their way to power from the lower classes."

Thus, almost Byzantine roots in the formation of the Russian state can be traced in the very name SLAVS. And the church in Russia became Byzantine. But there are strong doubts that Orthodoxy emerged before 1000 AD.

The proto-language is, as it were, the Old Russian language or Sanskrit. It is, as it were, the basis of all Indo-European languages. These are basic words like maser - phaser - sister - brother, water (water), flame (flame), help (slave) and the like. However, the very name of Sanskrit already contains the word crete = reigns. This is an important evidence that new, later layers were superimposed on the ancient (not too extensive) language, and many times surpassing the primary language. And already this new language is called Sanskrit.

Examples: mother-mother, son-sun, tata-tata, sva-sva, cup-chalice, young-young, new-nava, when-koda, then-tada, blowing wind, tree-grav, bad-fool and etc. "Tryn-grass", Skt. "tryna" is a herb. "Buka will come and gore you", in Skt. "bucca" is a goat.

"Silent sapa", sapa has the form of "sarpa" Sanskrit. - snake. The root "ga" in both Sanskrit and Russian means movement. It is in Russian that there are many words with "ga": no-ga, tele-ga, doro-ga, etc.

And what was the name of that truly ancient language, and what words it consisted of, now has to be determined. And further, that ancient language is related to the Russian language, which developed in the era of some ancient Tsar. And immediately there is a version of the modernity of Sanskrit with ancient tsars, that is, tsars existed for a very long time, much earlier than the era of French rule over the Slavs.

In the Carolingian-Merovingian era and after it, in the era of the emergence of the tsarist movement (= Christianity), the Jews are self-aware as a special character, mentality, and psychology. They lived in previous centuries in isolation, mixed with other peoples. But now cities have grown, the population density has grown, there are more contacts between people, there is something to compare with. And they began to compare, analyze. They got the opportunity to write and read the texts of the deeds of leaders, politicians, military leaders. And at the same time, before their very eyes, there was a constant humiliation of Jews, discrimination, squeezing out of all spheres of life. And at the same time they were convinced with their own eyes that the texts from the Jews are deeper, more talented, more truthful and capable of influencing the reader more strongly. The Jews understood their singularity and exclusivity, and they expressed it without shame in their very first writings. They began to unite, create organizations, help each other ... The Jews received practical experience of ruling through unification over the surrounding countries and peoples in Khazaria, and later in many other countries. Now this experience is acquiring a global world character, led by the world Khazaria = USA + England.

Couldn't it have been tempting in those ancient times to reinforce your Jewish community with beautiful texts that would

later become historical documents? This is happening now. The Zion Protocols are proof of this.

Who are Ruriks ?!

Here are Ruriks. Why and why they began to be invited to the Russian throne. Relations, economic and genetic ties have always existed between Russia and Western Europe. It was not Peter I who opened the window to Europe. This window has always existed, from time immemorial. This confirms the version that the Romanov dynasty worked in perverting history in their favor.

And if Rurik was actually Rurin? The letters K and H are very similar. Especially with old writing.

And if initially there was not Rurik but Pupichi ?! That is, simply PUPKI. That is, in the Western European spelling, Pupici was read as Ruriki? That is, no more and no less, but simply the descendants of Pepin the Short? !!! True, the version remains likely that the name of Ruriki comes from the Ruhr, the German region. It was kept by the actor Mickey Rourke. But our version is no worse. Maybe it was accidentally distorted, or maybe this puzzle was deliberately created, with the possibility of solving it, which is what we are doing. At first, a couple of months ago, this was expressed as a weak hypothesis. But ... Everything gradually fits into my head. And now additional arguments appear.

- The "baptism" mentioned above. That is, the movement of the hand from the forehead (the growth of a normal person), but not just to the stomach, but to the PUPPU. - The navel - this is the Pupich. That is, even a guess about the meaning of the gesture of baptism, born from other considerations, considerations of the growth of the king and emphasizing his greatness, is suddenly confirmed purely linguistically by the word Navel.

- Chinese "pipins" as they are called - it is clear why, small stature. But could this word jump from France to China or back bypassing Russia = Razia? After all, there were no planes yet, and there weren't even balloons, despite the ancient Chinese ingenuity.

True, they had powder rockets, but they were not yet manned and by no means intercontinental.

- Apple variety "pipin" - also due to the smallness of the apples themselves. The variety is popular in Russia, it is well stored.

- Something small, a lump, is called Pipochka or (this has already been changed by the modern humorist) Pimpochka.

- Truths fly in the air. Who knows where it came from, nondescript, but everywhere present in Russians, the character Pupkin seems to be accidental ...

- And here's another church word POP. - A?! Well, only an absent-minded person will not see kinship here. Moreover, this relationship is independent of all of the above. And confirming the dwarf origin of the gesture of baptism. POP - PIPIN.

- And suddenly it turns out that POPA is not just a softening of the word ASS, but an independent word, formed simultaneously with the gesture of baptism, and on the basis of a low location in space. And it is even more likely that the word ASS was formed later, just from the word POPA. Maybe through the article JE, which can be read in different ways, both as E and as SAME. Like the card word JOKER = JOKER = JE KAR = JE KING. I mean JE POPA = ASS. What tricks are taking place ...

Who is Kalita ?!

Here is one of the first Russian tsars: Ivan Kalita. As soon as historians deciphered the word Kalita. They agreed that it was like a bag of money. However, we believe that - Kalita = Reigns. That is, he is a direct descendant of certain kings. The kings came from Tartary. Either these kings were Byzantine. And here, a different interpretation makes a big difference in the description of historical events.

Synonyms for dwarfs

ага	агапе	агатовый	ага-хан	аглая

The role of pygmies and dwarfs in human history.

We all know the book and cinematic image of a kind of secret dwarf who rules the whole world. Like Goodwin the Great and Terrible. But not everyone realizes that this image is not as fantastic as it seems at first glance. Truths fly in the air, you just need to catch them and express them in the form of text.

To understand all aspects of the current seething politics, it is imperative to be at the forefront of the science of genetics and its human offshoot. What's in store for us? Where are we heading? Who and why and for what sins is dragging us there? People need to know where they are going and who is dragging them and

where. Everyone should know, both those who are dragging and those who are dragging.

It assumes a certain level of knowledge of the reader and minimal coverage of already known scientific material. For all facts, theories and sciences already known to science, contact Wikipedia with questions.

Science has reliably established that modern man left Africa about 125 ± 25 thousand years ago and through the Sinai Peninsula and in several directions settled in Asia and Europe. It is possible that there was a second stream through the south of the Arabian Peninsula, which gave birth to the Aborigines of Australia and the ancient tribes of the Aborigines of India. For our presentation, the very facts of such settlements are sufficient. This is not the main thing.

History is history, and there are also social sciences and there are biological sciences. And what the story tells about in one simple word "resettlement", upon close examination, breaks down into millions of destinies of individuals and into trillions of various biological processes. Similarly, after 1917, a sort of "resettlement" took place from Russia, on the theme of which thousands of tragic memoirs, novels and stories have been written. And the recent events in Kosovo are also the resettlement of Albanians in Serbia. And the conquest of America by Europeans, with scalps and targeted smallpox infection of the natives, is also a settlement. In which, by the way, the main role was played by the main characters of our story, who centuries later created in this place a very strong New Khazaria for the rest of the world.

So, for simplicity, we consider the upper stream of human settlement from Africa, through the Sinai Peninsula. All of humanity was still black, small in stature. Well, let's say, men, our distant ancestors, were 150 cm tall. The figure does not matter.

Modern official science believes that humanity is, as it were, one species. And this is how it came out of Africa, so it allegedly settled further and amicably, with songs and dances, mastering

new territories. Sometimes, in order not to get bored, by making wars among themselves. However, reflection gives another picture, which is confirmed by all current political and biological reality. And this picture is as follows.

Observations show that all genetic abnormalities among a certain human tribe persist for many generations, without particularly manifesting themselves. Conditionally, small growth can be considered a genetic deviation. Coming out of Africa 125 thousand years ago, and gradually settling in the Sinai Peninsula (a significant place) and its environs, mankind from time to time found small people in its composition. Although in small quantities. No one understood where they came from, but apparently they believed that this was the will of God. But in fact, it was the oldest admixture of pygmies who once mixed with mainstream humanity. The few remnants of the most ancient tribe of pygmies still live well in Africa, in its various localities, which is reflected in the figure taken from the official Wikipedia.

Figure 30. Modern habitats pygmies in Africa. Comparative growth the current European and pygmy (Wikipedia).

There is also another point of view. If you google on the Internet, you can find a certain amount of ancient evidence of dwarfs living in Siberia and Europe. It is no coincidence that legends about all sorts of small forest and cave dwellers have been preserved in the memory of the peoples, who are turned by writers into gnomes, hobbits, orcs, elves, goblins, nibbles, gremlins, langoliers, trolls, goblin and so on. Most likely they really existed

and they were all the same descendants of the settled African pygmies. Perhaps they were outcasts from the main human herd.

What are they, pygmies? - The growth of men is less than a European man by 30 percent, and women - pygmies are in the region of 1 meter or less. Occupations: hunting and gathering fruits, agriculture is not found. The brain size is noticeably smaller than the European one, which is quite natural with a smaller body size. They are very musical, very erotic. In some pygmy tribes for a man, an erection is a normal, lasting condition. Women - pygmies are very willing to enter into relationships with ordinary men - not pygmies. Pygmies hunt with a bow, often poisoned arrows. They know a lot of medicinal properties of plants. Additional aspect: innate special, independent psychology of pygmies. Like cats walking on their own. Their genetic psychological predisposition is markedly different from ordinary people. In addition to musicality, pygmies have some stronger traits than an ordinary person, for example, in anticipation of the situation, which is necessary when hunting. At the same time, in some respects, pygmies are much more primitive and unpretentious, for example, in everyday life. The life expectancy of pygmies is noticeably lower than that of ordinary people, somewhere in the region no more than 40 - 45 years. Interestingly, it is around this age that today's people develop diabetes, hypertension, and many other diseases. This is the situation with the settled humanity.

As you know, among the Mongoloid race there are a lot of small people. In recent decades, the average height of a Chinese or Japanese has started to rise. But there are still a lot of undersized ones. And in the vastness of Russia, take a walk around the city and you will certainly meet a dwarf. Of course, it is not easy for them among large people, but dwarfs have survived to this day in almost all countries. They are fighting for existence. They are fighting to survive. They are fighting for the continuation of the race. And this is not very easy.

There are many dwarf kings in history, for example Pepin the Short and his ancestors and descendants in France. Some Russian tsars. A dwarf in royal entourage in many countries was traditional. But let's not forget that these are no longer purebred dwarfs or pygmies, they are already hybrids with an ordinary person, and the hybrids are not of the first generation.

A small digression. In our life, everyday life experience does not always help. Here, let's say we mixed two identical portions of water, but different temperatures. The first jar had a temperature of 80 degrees. The second jar had a temperature of 20 degrees. What will be the temperature of the mixture? - That's right, $(80 + 20) / 2 = 50$ degrees. Oh, if everything was always and everywhere so simple and amenable to the average - arithmetic calculation.

Suppose that there was an interbreeding of two people, a man and a woman, belonging to different peoples, which evolutionarily diverged a very long time ago, hundreds of thousands of years ago. Suppose the first is a man of the European type, height 160 cm. The second is a very beautiful woman from the tribe of pygmies, height 100 cm. In all the further presentation we will have in mind the hybrids from the crossing of an ordinary man and a woman - pygmies. So, what is the further fate of this offspring?

Biology provides the following standard answer to such questions. If the crossed individuals differ quite strongly, then the hybrids, as a rule, do not produce offspring.

Behind these dry words - as applied to a person - there are absolutely terrible personal tragedies, unrequited love, suffering, disappointed expectations, distorted destinies. Hybrids do not fit into the surrounding human society. They themselves feel their difference and those around them feel their difference. If we are talking about an ordinary human society. It seems that such hybrids did not fit into the community of pure pygmies. They are usually rejected because of their inadequacy to this society, different behavior, different reactions to certain situations. They are also rejected because of the small (or large) size differences. They are rejected due to the violation of proportions.

However, hybrids born among pygmies, for example, in Africa itself, get the prospect for further evolutionary careers. If they received high growth from their father, then they leave the mother's house and go to neighboring non-pygmy tribes in search of happiness. This happiness smiles at someone. Therefore, it can be assumed with a high degree of certainty that Africa in a significant percentage contains in its peoples pygmy hybrids, both absorbed in antiquity and very fresh, recent ones.

For many readers, what has been said will suffice for their level of understanding. Indeed, a person is small in stature, complex, wants to prove to others that he is worth something in this world.

Or, on the contrary, they are too big, embarrassed by their height. What is incomprehensible here?

However, close examination of the situation with hybrids opens the door to a huge layer of human history and evolution. But before considering this layer, we must digress into acquaintance with some not described anywhere, but extremely necessary for understanding the task at hand, the basics of genetics. Why have pygmies never mixed with ordinary Africans over the millennia? Why didn't you acquire the usual high growth? And why is the current humanity seething? And why are the American Indians described so cruel? Why did they sacrifice to God every year not a ram, not a goat, not a bull, but the most beautiful young girl (if this is true)? For which, in fact, they were punished centuries later by almost complete genocide and extermination. Truly, there are some heavenly laws of balance, justice and retribution. After all, something similar happened to the Soviet Union. First - the aggression of Khrushchev, defamation and execution of Lavrenty Beria. Then the troubled times of the Brezhnev era, and then the reckoning - the collapse of the USSR. Great things are seen at a distance. But it doesn't end there either.

A person has 23 pairs of chromosomes. Many areas of science are deliberately hampered by certain forces and pseudo-scientific circles. Circles of obscurantism and obscurantism, which distorted history beyond recognition. With the support of the domestic forces of obscurantism, which now stifle all modern achievements of science. Along with many biological directions, the study of the mechanism of chromosome functioning remains in practically zero state. How does this or that chromosome affect the construction of this or that tissue, this or that organ? In any situation, you need to have at least the simplest model or version of the mechanism. This is what Sherlock Holmes used to do. The simplest version, for example, can be such that each chromosome, as it were, "builds" its own organ, its own tissue. That is, there are about 23 types of organs and tissues in the body, and each type of organs or tissues builds one of 23 pairs of chromosomes. That is,

the human body is, as it were, molded from 23 pieces (of various shapes) of plasticine. Each pair of chromosomes works on its own and the deficiencies of one chromosome in the pair are compensated by the other chromosome. In principle, a good and plausible enough model. And as a first approximation, it is most likely something like this, close to this. But. An attempt to apply this model to describe various biological situations reveals that the matter is somewhat more complicated. It turns out that not everything in the body is generally determined only by chromosomes. After all, even the fingerprints of identical twins do not match and are not even always similar. There are other aspects as well. The conclusion turns out to be this (regarding only chromosomes): many chromosomes are involved in the formation of each organ, almost all 23 pairs. Only their role is different. Some chromosomes have a stronger effect, others weaker. But everyone influences. On the device of each organ.

Expressed in other terms, each chromosome builds not only "its" organ, or a fragment of its own organ or tissue, but it also builds fragments of other tissues, in particular, nerve branches that grow to the brain itself and even create its own zone in the brain; as well as branches of the circulatory system (to the very heart), lymphatic, fragments of a neighboring organ and other possible tissues. It is similar to a computer device, in which each block, each board has its own cables for connecting to other blocks. As a result, tangled tangles of plumes form in the computer. And all these 23 macro - fragments of organs and tissues mutually - grow into each other, intertwine like crowns of 23 (or even 46) nearby trees, forming a human body. You can't make such a structure out of pieces of plasticine. There is inter-germination, inter-penetration even at the cellular level.

This is where the retreat ends. Now, similar to the picture above, let's compare the chromosomes of an ordinary person and a pygmy. We will not compare them in size. It is possible that the corresponding pygmy chromosomes are even larger in size than the chromosomes of an ordinary person. What is important is the

product that these chromosomes produce. And here there is undoubtedly such a moment that the pygmy chromosomes tend to build smaller organs than the chromosomes of an ordinary person. Even if they found themselves in a situation of incest. For many thousands of generations, chromosomes "rub" against each other. Once, from 500 thousand to a million years ago, there was a bifurcation of the species of homo sapiens into ordinary people and pygmies. Maybe this dichotomy is the filling of objectively existing niches for the existence of large and small organisms of the tiger-cat type. And then the rest of the chromosomes are pulled up to large or small sizes. But there is another option, that once there was a very abrupt, but viable mutation of the chromosome, which determines the architecture of the brain. It is possible that these two architectures date back to the most ancient, universal division of all animals into carnivores and herbivores. Which architecture was primary, which is secondary, this is a question for the future. But two brain architectures arose, two psychologies emerged. And then, for many thousands of generations, these two architectures evolved separately. Surely the pygmies were mostly hiding from ordinary people. Surely from time to time they crossed, but the hybrids inevitably disappeared sooner or later. The difference in architecture and psychology is too great. For many thousands of generations, all other chromosomes have evolved to fit each of the brain architectures. Many factors worked here. The chromosomes of pygmies began to build all organs smaller than the chromosomes of ordinary people. Or vice versa.

For the presentation, it will be useful to introduce a new term for chromosomes ground in for a small body and an organism. We will further call the chromosomes of an ordinary person as simply chromosomes, and the chromosomes that build a small organism as pygmosomes.

So, undoubtedly, in history there have been numerous crosses of ordinary people and pygmies. But the hybrids did not produce offspring. Or they gave offspring, but all the same, subsequent

descendants gradually left this celebration of life and from the stage of evolution.

However, already in the epoch closest to us (about 7 - 8 thousand years ago), new successful (over the foreseeable future) crossings occurred, after which the offspring of the hybrids began to grow. Transcendental evolutionary breakthroughs in drawings, writing, texts, science, technology, and music played an important role in strengthening the position of hybrids. In the face of these breakthroughs, many of the most ancient traditional qualities necessary for survival have lost their significance: instincts, aggressiveness, strength. And new qualities gained importance: the perception of texts, learning, logic, demand from society, etc.

What happens in the next generations of hybrids? What is the situation with chromosomes in generations hybrids-2, hybrids-3 and so on?

In the first generation (hybrids-1), we have 23 ordinary chromosomes and 23 pygmosomes. These are very strong, high quality hybrids. Further, it all depends on who the hybrid-1 is marrying. In an ordinary society, where ordinary people predominate, in it, hybrid marriages also occur mainly with ordinary people. It is worth mentioning that ordinary people are instinctively, extremely reluctant to marry hybrids. One does not even have to talk about love, about feelings. But ordinary people have defects, injuries, or difficult life situations when they are forced to marry anyone. And in turn, hybrids rely only on this and happily take the opportunity. In addition, the hybrids themselves, as a rule, have a dislike for similar hybrids, and marriages between them can often lead to severe defects in the offspring.

So, if a hybrid marries an ordinary person, then in the next generation hybrids-2 may turn out to be the most - very different options. From a completely ordinary set of chromosomes, 46 ordinary chromosomes, to a repetition of a set of 23 ordinary and 23 pygmosomes. And then, after 5 - 10 - 20 generations of such marriages, on average, the number of pygmosomes in the offspring decreases. But with the growth of the population, these

pygmosomes spread among the entire population of the country. As geneticists joke, all Russians are relatives in the 20th generation. And if in this 20th generation we had a dwarf, then we can all in a significant percentage be carriers of one or another pygmos. And dwarfs in the 20th generation were definitely among all Russians. For example, those who know superficially the theory of haplogroups, they argue that there are no traces of the Mongol conquest (haplogroups C, D, Q) among the Russians. However, these traces do not necessarily remain on the Y chromosome; they just might have remained on other dwarf chromosomes.

Let us call, purely formally, the later generations of carriers of the pygmos by the term gabers. That is, a word related to hybrids, referring only to humans and generalizing all hybrids-1, hybrids-2, etc.

What is the difference between people - gabers carrying pygmosomes? - A variety of situations are possible here. There are a lot of situations. Consider how many ways you can inject 1 pygmosome into a collective of 46 chromosomes? That's right, 45 ways. And in how many ways can 2 pygmosomes be injected into a collective of 46 chromosomes? That's right, in 45x44 ways. Etc. That is, the number of possible varieties of gabers is huge, 45x44x43x42x41 ... These are billions (billions (billions)) of combinations. All gabers currently existing on Earth are

absolutely different, do not repeat each other. The similarity of all gabers to each other is “similar manifestations in the phenotype of different dwarf chromosomes and their combinations”. There are not so many characteristic pygmos, and their manifestations are not so diverse. There are several main groups that share some common characteristics.

The most important, iconic group is the carriers of the pygmosome, which is most responsible for the architecture of the brain. Let's call them gabers-1. These are people who differ in psychology. You can put it this way that gabers-1 are people close to the psychology of orthodox pygmies, but with an acquired large body. These differences are complex, in terms of various indicators, both for the better and for the worse.

- Advantages of gabers-1: the ability to distant miscalculation of options (including musical constructions, and writing detective stories, and financial pyramids, and money in growth, and so on), the ability to foresee events, investigate crimes, science, mathematics, philosophy, logic, creativity, humor, literature, poetry. But, unfortunately, in its pure form, the gaber-1 group is relatively rare. Usually several other, very different pygmos are attached to it, which greatly spoil the life of their owners.

- Disadvantages of gabers-1. However, since the brain volume is practically the same for all people and hybrids, the redistribution of resources towards the calculation of options affects the rest of the lines of thinking. In particular, on the everyday and moral aspects of behavior. As a rule, gabers-1 are primitive in their system of moral values. Money - profit - women. Eliminating competitors by any means (familiar?). Betrayal. Promises are deception. Kidalovo. - All this is usually the norm for gabers-1.

Group gabers-2, carriers of all other pygmosis, responsible for other organs and tissues of a person, except for the architecture of the brain. Although some of these pygmosis also affect the functioning of the brain. Basically, these are normally thinking people, but with complexes, sometimes with talents, with oddities. These pygmosomes, inclined to build small organs and tissues,

they bring a strong negative effect on the human body, and in the global aspect - on the whole people - the bearer of these gabers-2. These pygmosomes give rise to:

- Small growth with a normal brain structure. These are the same ordinary people, but morally very suffering from their small stature. Moreover, small growth, as an option, sometimes happens only because of short legs. Or with short arms as well. These are already crossings in pygmosomes and chromosomes.

- Disproportionate arrangement of body parts and organs. Small hands and feet, fingers, nails. Sometimes microcephaly. Sometimes - the narrowness of the chest or vice versa, the narrowness of the pelvis with a wide chest. Someone has a small penis or small boobs - thanks to the great-great-great- ... - grandmother - the dwarf.

- It is very likely that pygmosomes give rise to diseases that are now called rejuvenating.

- Diabetes is a small pancreas that fizzles out by age 45 and stops producing insulin. This is the lifespan of the pygmies.

- Early death, heart attack, stroke at 40 - 45 years. This is a repetition of the lifespan of the pygmies. How many geniuses have finished their path at these ages ?!

- Someone, somewhere in the brain, a small area responsible for this or that function turns out to be dwarf. And he cannot fully control this or that function. Someone becomes a homosexual, someone is a lesbian, someone is a necrophile or something else. Someone develops various phobias. Someone has low self-esteem. Someone has been masturbating for a long time, because the restraining center in the brain is from a dwarf.

- Small parts of the brain that create mental problems, complexes. It is possible that this is where the Chikatils and other maniacs appear. It is possible that they have a pygmosome, which is responsible (among other things) for the part of the brain to contain aggression. Therefore, maniacs cannot contain their aggression. Although in some cases it stimulates creativity. To understand a maniac is to forgive.

- Poor coordination of movements. A large body is more difficult to control than a small one. And the pygmosome cannot provide the full-fledged work of an ordinary organism.
- Flat feet - it is very likely that it also comes from pygmoids, since for small stature and weight the curvature of the foot is not so important. Etc. etc. This requires a painstaking, lengthy and difficult analysis.

But the most important thing. Gubers both 1 and 2 are the main producers and carriers of science, technology, knowledge, music, literature, poetry. They live by this, because it is difficult for them in society. Without them, both science and culture will quickly go out. And they live like pygmies in the jungle, outside of society, who is where, who is in formulas, who is in texts, who is in bank accounts. They are deprived of the happiness of fully communicating. Their concern is the salvation of themselves and their own kind. This is what they mean in all religious texts. Which ordinary people perceive for themselves, but they have something to be saved from ?! It is very difficult for gubers to find balance in this struggle for salvation. Sometimes they go overboard with their capitals and deception of the common population. From time to time they overstep the bar, their sins accumulate, the people rise up against such deception and oppression, and they are either destroyed or expelled from the peoples of residence.

It should be added that all of us, both Russians and Europeans and Asians, all of humanity, are carriers of 1 - 2 "pygmoids", at least. Who is more, who is less, and who has what, all this also affects the phenotype. In addition, it is the presence of a pygmoid that stimulates learning, creativity, creates talents and geniuses. Therefore, any "clarification" and "disassembly" who is pure and who is a hybrid is meaningless. Humanity has already absorbed both pygmies and dwarfs and is moving as a single evolutionary front in the direction of progress. And this progress is a person who owns texts, sciences, crafts, technologies. A new, universal human nation is being formed "from what was". But with a large,

simply huge percentage of marriage, freaks, morons. About 20-30%.

But there is no need to rush. And there is no need to drag into the past. Everyone should flounder and then he will contribute to the common future human gene pool. It is not known what mutations and crossings will occur. It is absolutely not necessary that they will occur in the children of oligarchs or presidents. They can occur in a random intercourse between a homeless person and a homeless woman. And then their descendants, the descendants of stinking homeless people, will drag humanity to a bright evolutionary future.

However, the attitude of different religions to inclusions of pygmies is different. Christianity recognized these inclusions, although not very willingly. But Islam denies pygmies and their manifestations. Although this does not mean that there are no pygmies carriers among Muslims. It's just that there they have to more carefully disguise themselves as others.

It defies judgment. Were it not for the gabels, we would now and forever remain a crowd of absolutely identical fools running (well if) with sticks and stones after wild animals and picking edible roots out of the ground. No literature, no mobile phones, no televisions, no cars, no airplanes would ever exist. But there would be no bloody resettlements, genocides, conquests, enslavements.

So what sins do we, ordinary people, pay for when we drag out our lives in poverty, robbed by gabels? - We are paying for the original sin of our ancient ancestors, for interbreeding with dwarfs. Or maybe it's for the best ?! Why did the Indians have cruel traditions and sacrifice beauties? - Because they are echoes of the past Indian Holocaust. Oh, how beautiful pygmy women are, no man can resist.

Expulsion of gabels from different countries of Europe over the past thousand years:

1080 - expulsion from France

1098 - expulsion from the Czech Republic

1113 - expulsion from Kievan Rus (Vladimir Monomakh)
1113 - the largest pogrom in Kiev
1147 - expulsion from France
1171 - expulsion from Italy
1188 - expulsion from England
1198 - expulsion from England
1290 - expulsion from England
1298 - expulsion from Switzerland (100 - wheeled)
1306 - expulsion from France ("Cherche la femme" = "Find the witch!" 3.000 - burned alive)
1360 - expulsion from Hungary
1391 - expulsion from Spain: 30,000 killed, 5,000 burned alive
1394 - expulsion from France
1407 - expulsion from Poland
1492 - expulsion from Spain (Law on the eternal ban on entry into the country)
1492 - expulsion from Sicily
1495 - expulsion from Lithuania and Kiev (Prince Alexander)
1495 - expulsion from Florence
1496 - expulsion from Portugal
1510 - expulsion from England
1516 - expulsion from Portugal
1516 - Prohibition to settle in Venice, except in the ghetto
1541 - expulsion from Austria
1555 - expulsion from Portugal
1555 - ban on settling in Rome, except in the ghetto
1567 - expulsion from Italy
1570 - expulsion from Germany (Margrave of Brandenburg)
1580 - expulsion from Novgorod (Ivan the Terrible)
1591 - expulsion from France
1616 - expulsion from Switzerland
1629 - expulsion from Spain / Portugal (Philip IV)
1634 - expulsion from Switzerland
1655 - expulsion from Switzerland
1701 - final expulsion from Switzerland (decree of Philip V)

1660 - expulsion from Kiev

1806 - Napoleon's "ultimatum" (the second attempt to create the state of Gabers)

1828 - expulsion from Kiev

1933 - expulsion from Germany.

Abusive language.

The obscene language is the language of the rulers over the conquered.

Look at the heroism of Minin: he expelled the Poles (brothers-Slavs) from Moscow. And he gave it to the Great Russians, not the Slavs. Look at the heroism of Susanin: he led the Poles (brothers-Slavs) into the quagmire. And he left the Great Russians in power. Look at Putin: he introduced a holiday on November 4 "liberation from the Poles" (brothers-Slavs) and a holiday of submission to today's Great Russians. Look at the maniac Pichushkin. He killed 50 Slavic young women. Good result! It's worth living for. From the same series, the maniac Chikatilo - 56 Slavic women (remember the Finnish names and surnames of Koyvela, Lakhtela and others). Norwegian Breivik - 70 victims. Norwegian Haber. Most likely from the same opera. And it is not Jewry that is to blame! This is a Hunnic bandit ethnos. These are the Yakuza, born to kill. Take a look at Sobyenin. He equips the now Chukhonskaya Moscow at the expense of the rest of Slavic Russia. In the expectation of the subsequent eternal parasitism of Moscow over Slavic Russia. Look at the name: Russia. This is Kievan Rus, renamed in the Chukhonsky, Vologda style. Look at the title: Russians. The Chukhonts have learned to speak Russian. Forgot your gibberish Siberian language. And they became Russians. Have appropriated to themselves the name "Great Russians". Previously, only the Slavs were Russians. Today Russians are Chukhonts. They stole German missile development (Wernher von Braun) and nuclear weapons (Manfred von

Ardenne). And today they are shaking with nuclear weapons and frightening the whole world. Putin preaches the ideology of "crap scratches" on technology. The Chukhonts climbed into Kievan Rus and squeezed Ukraine out of it. Look at the obscene language. It was brought to Russia by the Chukhonts. Ukraine, Belarus and Poland do not have their own obscene language. He is not needed in communication between Slavs, between equals. Look at the Russian language. This is the Sanskrit language, it is the language of the Slavs. The Chukhonts appropriated the Russian language, and the Slavs were forced to speak local dialects and separate from Russia.

About the modern Russian obscene language. Those who have worked with Front Page know that each file has two parts. One part is purely textual. The second part is a folder with pictures, tables, etc. In general, files from Front Page are formatted text, significant in size and information. In contrast to the bare text, which is called for by lovers of "cultured" speech. It is the modern Russian obscene language that is a formatted language. Supplied with drawings, illustrations, emotional assessment, reflection of the weight and significance of a particular phrase. This language is large in terms of megabytes, in terms of information content. This is a language that involves both hemispheres of the brain. And the transition to ancient pure Russian, to cultural, to grammatical is a retreat. This is the transition to the "pure text" mode. In the "text" mode, you can memorize and say many, many words, but there are no hyperlinks, no pictures, pictures, inserts, tables, evaluating the significance of expressions, the importance of events, highlighting the main thing, and so on. No emotional assessment of events. No formatting required. Nothing. Only bare text goes. Of course he is economical. But at the same time, only one hemisphere works. As you know from humorists, flat jokes are sparingly located in the head. There are a lot of them. But we are interested in tricky jokes, complex in space, unexpected in meaning, with pepper. So in the future, we will not once turn to the Russian spoken obscene language to strengthen expressions.

Can two peoples live together, in a mixed state? What for? People are mentally different. The fact that one people is not pleasant is ridiculous to another. And the fact that one nation is tolerant causes a cry from another nation. But when both peoples are mixed, then each person must follow the rules of both one people and the other. Otherwise there will be a cry, otherwise they will beat. And this really annoys people and does not allow them to escape from civil strife. It is in such a tense state that we live.

A quiet civil war is going on in Russia today. Which has been going on since the days of Rurik. When this Finno-Ugric bandit came and conquered serene Kiev. Simply, he came and conquered Kiev with his impudence, arrogance, greed. Not with the mind. And with animal strength and a guttural cry, which later evolved an obscene language. It is possible that the obscene language was the very proto-language of the wild Finno-Ugric. When the spouses lived in the family, the command "fuck you **" meant for the spouse a requirement to fulfill marital duties. And the command coming from the spouse "went to n ****" meant a requirement for the spouse to fulfill marital duties. Well, and then in the same spirit.

And our Slavic country, smart and kind, became stupid and mediocre. And now it has been in this state for 1200 years. And no matter how much the rulers try to wake her up, it does not work and will not work. Because the Slavs are in a stupor and refuse to understand what is happening to them. Lost ground underfoot. The shores are tangled. Because here two different peoples clashed, clashed: sl Avians and Finno-Ugric (= Tatar-Mongols). And until these nations are divorced, we will live in blood and shit.

We needed them to conquer them, to take Kazan? We are Slavs, a pure race that conquered India and dozens of other peoples. But there is also a huge China. And the Finno-Ugric people are the echoes of China. These are Slavic-Chinese hybrids. That is, here they clashed, in Russia they clashed, the Slavs and the Chinese. Since then, they've been grinding each other. The further, the

more. And there is no way out of this meat grinder. In addition to the divorce of the participants in different directions. And drawing the border.

The Tsarist word of the Russian language.

A huge layer of the modern Russian language is associated with the word TSAR and its derivatives. The tremendous meaning of the word Tsar in Russian, and in all European languages, indicates that the very name Slavs does not come from the verb "to be famous" or the noun "word", but from the name Tsarev, that is, belonging to the Tsar. Slavs = Tsarevs. And this affiliation, this submission was not a formality. This submission was understood, recognized and approved by the people, which was reflected in a huge number of Russian words derived from the word Tsar. Moreover, most of these words carry a positive, high meaning.

Most of the names of the Slavic and generally European states come from the word Tsar, Tsarev, or Gall = Tsar:

Algeria = El-Tsar (el - article)

England = En-Gaul = En-Tsariya (en - article);

Hungary = Ven-Tsariya (Wends - Slavs);

Germany = Tsar-Mania;

Herzegovina = Tsarich-Govina (about Govin - a separate question),

Holland = Tsar-Landia;

Greenland = Tsarin-Landia;

Greece = Tsarichiya;

Georgia = Tsarichia;

Egypt = E-Reigns (e - article); (!!!)

Israel = I-Tsaril; (And - article)

Karelia = Tsarilia (or Karliya);

Crete (island) = Reigns;

Nigeria = Not-Tsar; (Negro = not king)

Poland = Po-Russia (compare Prussia),

Portugal = Porto Tsariya;

Serbia = Tsareva;

Syria = King;
Sicily = Si-King;
Slovakia = Tsarevichia;
Slovenia = Reigning;
Ukraine = U-Tsarina;
Caliphate = Tsarevich;
Croatia = Tsarevichia;
Switzerland = Switzerland-Tsariya (seamstresses - a separate conversation);

“That's where Egypt came from. The tsars moved there, however. Copts = Tsarits. They just (according to Fomenko - Nosovsky) made pyramids there not very long ago. Not at all 4000 - 5000 years ago, but the maximum, 1200 - 1400 years ago, or even less. Like the Chinese wall, it was not too long ago built.

Европейские (и не только) города:

Бухара = Бу-Цара; (Бу - Большой???)

Бухарест = Бу-Царист; (Бу - Большой???)

Глазго = Царичич;

Дакар = Да-Царь;

Иерусалим = ???-Царим;

Каир = Царь;

Кал-гари = Царь-Царь;

Керчь = Царич;

Киев = Царёв (возможно, есть и иной вариант)

Конакри = Кона-Царь; (Кона = Сан ???)

Копенгаген = Цариничин;

Краков = Царичев;

Курск = Царск;

Люцерна = Ле - Царина (ле - артикль);

Осло = О-Царо;

Сараево = Царёво;

Сиракузы = Царичич;

Сирт (Ливия) = Царит;

Стокгольм = Сток-Царим;

Тегеран - Те-Царин;

Харьков = Царьков (уменьшительное!)

Хельсинки = Царичинич;

Херсон = Царичин;

Церн = Царин;

Цюрих = Царич;

Чернигов = Цариничев;

Штутгарт (ср. **Стокгольм**) = Штут-Царит; (с намёком на татар, два Т).

и так далее, их очень-очень много.

А что уж говорить о многочисленных древних фамилиях и именах, как российских так и европейских, так это обязательно надо всем посмотреть по таблицам в предыдущей статье. Их тьма - тьмушая, содержащих в себе вариации слова ЦАРЬ. Все эти **Гартунги**, **Гарфилды**, **Геростраты**, **Мюнцер**, **Церетели**, **Пельтцер**, **Сруль**, ...

И это - не считая русских слов, в которых откровенно присутствует слово Царь, типа **Сирин**, **Сердце**, **Рыцарь**, **Карцер**, **Циркуль**, ...

И это - не считая европейских городов, в названиях которых откровенно присутствует слово Русский или корень **Рус**: **Брюссель**; **Марсель**; **Варшава**; **Вроцлав**; **Прага** (г=ц), **Иерусалим** и др.

Historical jumps of letters.

History is a multi-component science. Archaeological excavations, ancient documents, chronicles, scriptures and others are not always the main factual material in it. Why? - Because everything in history has been reversed to please the conservative strata of historians. All found artifacts are attracted by the ears to the era that is needed by the ruling classes in history or interested groups of the population. The main artifacts that have survived are the languages of different peoples. No matter how much you alter the alphabets, no matter how much you alter the grammar, no matter how much you reform the languages, it is impossible to destroy the memory of the people. Therefore, in order to advance

in the issue of the true history of the peoples of the planet Earth, we must prepare a solid base in terms of linguistics. The dominant now in Russian science in general and in world history in particular, obscurantism (obscurantism) does not allow the development of many areas, including linguistics. An attempt is proposed here to remedy the situation.

It is very likely that it was the word KING that was the first and main word that meant belonging to the people headed by the KING, which our ancestors discovered and proudly pronounced. As long as there is a KING, as long as there is a people. And then, having got a taste, people began to come up with variations to the word king to denote numerous concepts, phenomena, objects. From the word king, a huge tree grew. And after this royal tree of words was created, then, by analogy, other words were gradually introduced, with different roots.

Studies show that there is an abyss of factual material in languages. You just need to dig it up and process it. This is very similar to the extraction of grains of gold from gold-bearing sand. Here are a few grains for example.

1) Christians are by origin and kinship of words - not followers of CHRIST (he will appear later and his surname is secondary), but it is very likely that these are KINGDOMS, supporters of some king singled out in history. There will be a separate article about this king. This king, very likely, was a dwarf and from him came the very word KARLIK = KING LIKE.

2) It seems that what about Christ in the very first writings meant that he was not RISEN, as it is understood now, literally, but RISEN. That is, there was some teaching associated with that first dwarf, it later reigned everywhere.

Below is a collection of variations from the word KING. In this collection, almost every word deserves detailed research and commentary. But this is beyond the capabilities of one researcher.

All words in the collections below on the subject of KING are chosen and taken randomly, subjectively. This is a sample of the roots of words, which is about $80\% \pm 10\%$ of the entire

vocabulary of the Russian language. Please do not find fault. You can argue to the point of hoarseness over each word, whether to include it in consideration or not. Which of the modifications and derivatives. Therefore, the intuition of the authors and its majesty randomness are taken as a guide.

All the given word tables are illustrative and do not claim to be academic. Completeness is a matter of the future, on each such table it will be possible to defend a doctoral dissertation. And then to defend new and new, each time adding one new word. And each time taking away funding for themselves and depriving it of more important areas of science. As it happens now, for example, in nuclear physics. Where Velikhov rakes in everything with his collider, and the rest of the science is funded on a leftover basis.

Выборка собственно **корней** слов не превышает $80\% \pm 10\%$ от всего многообразия русского языка. А уж от каждого слова можно сделать не менее 5 - 10 - 20 производных однокоренных слов. Плюс к этому всевозможные семейства с одним окончанием типа рету**ши**ровать, мик**ши**ровать и т.п. Нетрудно заметить, что царский смысл в этих словах присутствует, хотя **шир** здесь и не корень. Подобные слова частично обозначены в начале каждой главы по принципу: *****шир**овать (афишировать) или *****скоп** (телескоп) или **кило***** (километр).

Огромное значение имеют географические названия, чины, имена и фамилии. Это как правило очень древние слова и непременно несут царский оттенок. Например: султан, колчак, калита. Или микола = мой царь и т.п.

Зарубежные слова взяты в очень малом количестве. Это неподъёмная работа и она ждёт своего энтузиаста. Взято только то из русского языка, что случайно всплыло в памяти.

То, что вариации от слова **ЦАРЬ** занимают царское положение и служат для выражения чего-то возвышенного и экстремального, это назревало давно. И вот назрело и была сделана некоторая компьютерная проверка...

Данная статья является необходимым компонентом для хорошего понимания реальной, истинной истории России и всего человечества. По этой причине она идёт одна из первых. Далее будут ещё несколько публикаций, которые создадут полную картину.

Профессиональные лингвисты могут пропустить ту часть введения, которая расположена ниже таблицы 1. Поскольку в той части излагаются общеизвестные основные закономерности перескока букв в древние времена в процессе перепечатки текстов. Речь идёт о добиблейских и дописьменных древних временах. То есть когда первая письменность только вводилась и изобреталась. Эта часть европейской истории человечества нигде не описана и не может быть восстановлена. Однако кое-какие языковые следы могут быть восстановлены.

Как известно, артикли в языках придуманы и существуют для благозвучия, для удобства произношения. Практически полное отсутствие всяких артиклей в русском языке позволяет утверждать, что русский язык более древний, чем многие другие с артиклями, слова в нем лучше утрясены между собой. А западноевропейские языки - моложе, в них много неологизмов и чтобы не было дурных звукосочетаний, используются артикли и многие буквосочетания читаются не так как написано. Хотя немало слов в последнее время пришло в Россию с других стран, с запада (борзописцы так и тащут оттуда, так и тащут!). Правда, они как приходят, так и через несколько лет уходят. Их забывают. Или их переваривает русский язык, и затыкает ими какую-то щель, что тоже не плохо. Вот уже и к слову кофе разрешили применять падежи, то есть кофе принято и стало русским словом.

Очень многое в области начертания букв свидетельствует о том, что Россия никогда не отставала от Европы, а напротив, была впереди. Ниже приведена таблица основных перескоков букв. Буквы, стоящие в каждой строке таблицы

перескакивают между собой. Причины перескоков подробно расписаны во всех современных, не закоснелых учебниках по лингвистике.

От себя добавим ещё один важный перескок.

1) **Ь** (Мягкий знак, русский) ↔ **h** (западноевропейское).

Вероятно **Мягкий Знак** = **Ь** существовал ещё в некотором пра-языке. Безусловно его присутствие было полезно. А далее его прочтение раздвоилось. В русском языке он так остался как мягкий знак, а в западных языках он мутировал в похожую по написанию букву **h**.

ТЬ (русский) - **Th** (латинское) :

Вообще, сочетание Th видимо от мягкого русского ТЬ.

EARTH (земля, англ.) - ERDE (земля, нем.) - ТВЕРДЬ,

лишний раз подтверждая происхождение сочетания «Th» у англичан. **h** = **Ь** !

MATHIEU (франц.певица) = МАТЬЕ! От МАТЬ (Th = ТЬ).

MOTHER = МАТЬ (то самое, Th = ТЬ).

MYTH (миф) = МУТЬ!!

RATH = ПУТЬ (Th = ТЬ).

THE (дзе - артикль, англ.) - ТЕ, ТЬ.

В русском осталось: ВОТ ТЕ НА!

Есть ещё и украинское

ЦЕ. ЦЕ САЛО, А ЦЕ ХЛИБ.

ПЬ (русское) - **Ph** (латинское) - **F**.

Пример:

ПЬЕРОН - PHARAON - ФАРАОН. От Перуна произошёл Фараон.

Аргумент. В европейских языках благополучно существует буква F. И в то же время откуда-то взялась Ph. Зачем?

FURER (вождь, нем.) = PHURER.

Вероятно, тянется ещё от ПЬЕРОН = ФАРАОН. -

ПАХАН - синтез PHARAONa и ПЕРУНа, тоже в своём роде вождь.

То есть по самому написанию букв **h** и **ь** видно их родство, отсюда оно и возникло.

Пользуясь случаем, выскажем свою гипотезу относительно такой многострадальной, но любимой в народе буквы Ё. Она была с древних времён и писалась как **Ю** (без соединяющей чёрточки). Но позже произношение этого сочетания переместилось в букву **Ю**, с таким же написанием. Подробности в другой раз. А буква Ё осталась сиротой, без написания и её пришлось вводить заново, причём довольно странным образом, вводя такие непотребные точки сверху. Это снова либо дебилность лингвистов, либо злой умысел с целью всё усложнить и разобщить народы. Думается, это сочетание **Ю**, переместившись в **Ю**, утащило за собой и букву **И** (и краткое), которую тоже пришлось вводить заново и тоже удручающим способом хвостика над буквой: **Й**.
 Вот как выглядят исторические перескоки букв.

Table 1. Historical jumps and letter interchanges.

Согласные										
1 ↔	Г	Ж	З	К	С	Х	Ц	Ч	Ш	Щ
2 ↔	Р	РЬ	Л	ЛЛ	ЛЬ	Й	П	ПЬ	Ф	
3 ↔	Б	В	Ф	П	М	Н				
4 ↔	Д	Т	Ф							
Гласные. Все.										
1 ↔	А	Я	О	Ё	У	Ю	Э	Е	Ы	И

It is assumed that the level of the reader is sufficient to understand that the words LEPESHKA and LAVASH are of the same origin. In this row there are also a lot of related words denoting a cake from other languages. Thus, jumps of the type were carried out: P

→ B (by pronunciation) → C (by spelling and place in the alphabet).

Table 2. Main variations of the CAR root.

Vowels are marked with an asterisk.

Г*Р	Г*Л	Ж*Р	Ж*Л	З*Р	З*Л
Х*Р	Х*Л	ЦАРЬ		Ц*Р	Ц*Л
Ч*Р	Ч*Л			Ш*Р	Ш*Л
С*Р	С*Л	К*Р	К*Л	Щ*Р	Щ*Л
С*П		К*П		**П, **Й	

Basic methods of forming new words from roots.

In general, this article can be presented in different ways. For example, you can take as the center not the word TSAR, but any other derivative from Table 2. For example, the word KIR or SOL or CHEL or CHUR. All these are related words. We took the word KING precisely in the sense of the greatness of the meaning of all derived words. All words with roots from Table 2 represent some kind of extreme, extreme, high, extreme concepts. And it is natural enough that the word KING is in the center. Moreover, it seems that the word KING was the most important primitive word, except that the word MAMA was pronounced earlier. The word KING, with minor changes, spread into all languages: SIR in English, SIR in French, SULTAN or SULEIMAN or KHALIF in Asian, and so on. As man evolved and domesticated, there was a branching of variations from the word KING.

- One of the dimensions of the branching of variations of the word ЦАРЬ is the variation of consonants and vowels in derived words. The consonant variations are shown in Table 1.

- The second dimension of the branching of variations of the word TSAR is the addition of various suffixes. Especially popular and frequent suffix variations:

Table 3. Variations of suffixes to the root ЦАР.

ЦАРСК	ЦАРИН	ЦАРИЧ	ЦАРИЛЬ
ЦАРЕВ	ЦАРЬ		ЦАРИМ
ЦАРЕВИН			ЦАРИНИЧ
ЦАРЕВИЧ	ЦАРИТ	ЦАРИТИЧ	ЦАРИД

Кроме этого к основным суффиксам могут добавляться другие суффиксы, а также к слову добавляются приставки, окончания и прочие усложнения, несущие новый смысл.

Одно из важнейших средств создания новых слов, это приставки. Среди самых распространённых:

1) приставка СО и аналогичные, как некоторый элемент, прикреплённый к корневому слову. СОКОЛ=СО-ЦАРЬ. Таких слов чрезвычайно много. СОЧЕЛЬНИК = СО-ЦАРЬ. ТОКАРЬ = СО-ЦАРЬ. КОСАРЬ = СО-ЦАРЬ. И т.д.

2) приставка БИ и аналогичные. Означающее нечто близкое к слову БЫТЬ.

ОБ-ЖОРА=БЫТЬ ЦАРЬ.

3) приставка МА и аналогичные. Означающее близкое к слову МОЙ.

МИКОЛА = МОЙ ЦАРЬ.

Далее по клеточно описываются основные примеры вариаций ЦАРЬ-слова.

В каждой главе приведены только некоторые основные, наиболее значимые слова, содержащие главный корень. Для каждого корня существует масса производных слов.

Обратите внимание на экстремальный смысл каждого слова. Или он возвышенный или наоборот, унижительный. Или очень важный или ничтожный. Или он всеобщий или, наоборот, уникальный. Или это гордое название посёлка или это памятная фамилия, имя. В любом случае смысл слова не простой. Он выделенный, он ЦАРСКИЙ.

Присутствие этого корня и его модификаций в географических названиях, в именах и фамилиях тоже не случайно. Посмотрите на многие географические названия, имена и фамилии и вы обнаружите их настоящий и исторический смысл.

Клетка 01. Г*Р.

Множество производных слов типа:

***гер

***гировать

***графия

***град

***горя

ger	great	gross	авангард	автограф

The oldest word in the Russian language.

Abstract. The words of the Russian language with the roots T * R, T * L, D * R, D * L, D * G have been investigated. The laws of ancient word formation are formulated.

The development of linguistic diversity occurs around a relatively small number of keywords. In our previous article, which unfortunately remained unappreciated by the scientific linguistic community, we investigated TsAR as one such keyword. And they brought up a rather extensive array of derived words, several thousand. New words are formed by adding various prefixes and suffixes, as well as changing root vowels.

Today we are researching the keyword TAP, or T * R in general. We are inclined to consider it as the primary, most ancient keyword, and the word TsAR - later, already spun off from the root TAP. But this is a subjective opinion. There were periods and peoples where both words existed in parallel and exist, and it is not known which was more important. In modern Russian, the words TsAR are predominantly used. However, there

are obviously old, ancient words, common words, in which the root T * R. And there are no analogues with the TSAR root.

Вспомним некоторые древние слова русского языка. ТОРКНУТЬ (толкнуть), ТУРНУТЬ (прогнать), ТЕРЕМ (дом), ТИРАН (властитель), ТОРМАШКИ (ноги), ТУРНИР (соревнование людей), ГУТАРИТЬ (разговаривать), ТЮРБАН (головной убор), ТЮРЬМА место заключения), БАТЫР (богатырь), ШАТЁР (дом), ХУТОР (поселение), СТЫРИТЬ (украсть), ТЫРКНУТЬСЯ (сунуться), УТЫРОК (плохой человек), СТАРИК (старый человек), СТОРОНА (с разным смыслом), и многие другие (основной список в конце статьи). Они именно с корнем Т*Р, и никакое ЦАРЬ здесь не применимо. Не скажешь СЦАРИК. Но скажешь ПРИВАТИЗИРОВАТЬ. Здесь ЗИР=ЦИР=ЦАРЬ, но уже после нескольких трансформаций.

Вспомним профессии, имена, различные устройства и придумки людей, оканчивающиеся на Т*Р. Это место абсолютно занятое корнем Т*Р. Всё это понятия, относящиеся к человеку, к ЦАРю, к ТАРу=ТОРу=Т*Ру.

АВИАТОР, АВТОР, АККУМУЛЯТОР, АКТЁР, АРТУР, АУДИТОР, БАРТЕР, БЛАНТЕР, БУЗОТЁР, БУХГАЛТЕР, ВАЛЬТЕР, ВЕТЕР, ВИКТОР, ВОЛОНТИР, ВОЛЬТЕР, ГАРНИТУР, ГИБРАЛТАР, ГЛАДИАТОР, ГЕКТОР, ГЮНТЕР, ДЕЗЕРТИР, ДЕТЕКТОР, ДИКТАТОР, ДОКТОР, ИЗОЛЯТОР, ИМПЕРАТОР, ИЛЛЮМИНАТОР, ИНКВИЗИТОР, КАНТОР, КЛИТОР, КОНТУР, КРАТЕР, КУТЮР, ЛАНКАСТЕР, ЛЮТЕР, МАСТЕР, МАНЧЕСТЕР, МОНТЁР, МОТОР, МУХТАР, НЕСТОР, ОРАТОР, ПАСТОР, ПРОСТОР, РИХТЕР, САТИР, СЕНАТОР, СИТАР, СОРТИР, ТРАКТИР, ХАРАКТЕР, ЮПИТЕР. И ещё сотни подобных слов.

Вспомним ещё несколько слов, различного назначения, выпадающих из первых двух списков. АБИТУРИЕНТ, АЛАТЫРЬ, АЛТАРЬ, АЛЬТЕРНАТИВА, АМСТЕРДАМ, ИСТОРИЯ, АРИСТАРХ, АРМАТУРА, АРТЕРИЯ,

АУДИТОРИЯ, АХТЫРКА, БАСТАРД, БАСТУРМА,
БАТУРИН, БЕХТЕРЕВ, БОГАТЫРЬ, БУНТАРЬ, БУТЫРКА,
ВАЛТОРНА, ВАТЕРЛОО, ВЕТЕРАН, ВИТОРГАН,
ВОСТОРГ, ГЕТЕРА, ДИКТАТУРА, ЗОЛОТАРЬ, ИНТЕРЕС,
ИТУРУП, КАТАР, КАТОРГА, КВАРТИРА, КРЕМАТОРИЙ,
КУЛЬТУРА, КУСТУРИЦА, ЛИТУРГИЯ, МАТЁРЫЙ,
МИНИАТЮРА, НОТАРИУС, ПАНТЕРА, ПЛУТАРХ,
ПУСТЫРЬ, РАСТОРГУЕВ, РОТАРУ, САТУРН, СТЕРЛИНГ,
ТЕРМИН, ФАТЕРА, ЧЕТЫРЕ, ШТЫРЬ.

Даже не сомневайтесь в древности упомянутых здесь некоторых, преимущественно еврейских фамилий. Евреи стоят у истоков цивилизации и у её продолжения.

Итак, предварительное знакомство со словами массива Т*Р можно считать состоявшимся. Теперь перейдём к историко-лингвистической части.

Вот что пишет Павел БУРИН....Предки нынешних турок были кочевниками, выходцами с Алтая. Их самоназвание «ТЮРК» означало «сильный», «крепкий». На Алтае они размножились и в VI веке двинулись на поиски лучшей доли. Самоназвание «тюрк» означало нечто большее, чем «сильный», «крепкий». Имея полную аналогию с ГАЛЛАМИ = ЦАРЯМИ, делаем вывод, что слово ТУР (или с любыми другими гласными, ТАР, ТОР, ТЮР, ТЕР, ТИР) означало ЦАРЬ.

Но тюркские вожди пошли ещё дальше. Они впервые в истории соорудили словесную конструкцию ЦАРИ ЦАРЕЙ, или на языке древних тюрков ТАРТАРИЯ (© Чурляев А.И.) Вот что означает это загадочное слово. Древнее тюркское слов ТАР, означавшее ЦАРЬ, в более позднем слое расселявшихся арийцев переродилось в слово ЦАРЬ. Этому есть подтверждение: в белорусском языке как раз многие русские слова меняют свою букву Т на букву Ц. ТЯЖКО (рус) = ЦЯЖКО (белорус). А белорусский народ как раз наиболее ключевой славянский народ.

Итак, ТАРТАРИЯ = ЦАРИ ЦАРЕЙ!

Учитывая древность событий расселения тюркских народов, можно без особой погрешности считать слова Т*Р самыми сТАРыми словами русского языка.

Большое количество производных слов от корня Т*Р образуются добавлением приставки СО. Как и в случае с корнем ЦАРЬ. Она означает нечто «совместное» с основным словом. Например, если ТАР означает ЦАРЬ, то слово САТАР означает тоже нечто царственное, иногда тоже ЦАРЬ или правитель. Отсюда происходит, к примеру слово ШАТЁР, место проживания царских особ, сатаров.

Ещё одна популярная приставка: БИ=ВИ=БЫТЬ или что-то вроде этого. БАТЫР = БЫТЬ ТАР.

С перескоком В=М получается приставка МА=МИ типа МОЙ. МЫТАРЬ = СО-ТАР. В эту же звуковую группу входит приставка ПО=ПЕ=ПИ, ФИ=ФЕ, и т.д. ФИ-ДЕЛЬ, ФЁ-ДОР, ПЕ-ДАЛЬ, ПИ-ДАР.

Весьма часто в качестве приставки используются многочисленные модификации того же слова ЦАРЬ. Типа КУЛЬТУРА=ЦАРЬ-ТУР. С другой стороны КУЛЬТУРА - это то же самое слово ТАРТАРия, только на полпути к превращению. Возможно, что народы, в которых родилось название ТАРТАРия считали себя более КУЛЬТУРными, да и так себя и назвали.

Весьма часто используется в качестве приставки французский артикль ЛА=ЛЕ=ЛИ и т.п. Он же и арабский артикль. ЛЕ-ТАРГИЧЕСКИЙ, ЛИ-ТУРГИЯ. ТАРТАРия двигалась на запад, частично через Аравию, и в качестве элемента содержала и зачатки французского народа. Народ ушёл. А артикль остался в русском языке.

Далее приводим таблицу основных слов с корнем Т*Р, с некоторыми выделенными группами. Точнее, по всей видимости малую часть всех слов Т*Р. Здесь возможны множество неточностей, так как массивы большие и трудно углядеть за всеми параметрами.

Слова с корнем Т*Р.

The most important word of all mankind.

All words with the root HABER and its derivatives.

An illustration of how letters are historically skipped in words. No linguistic analysis is performed. Only a selection of selected words. The selection is very approximate due to the lack of time for the authors. This collection cannot serve as evidence of any linguistic and etymological statements. This is just an illustration.

Jumping letters occur not only for random reasons, but also deliberately, when it is necessary to give new shades to the word.

Гоблин →	Габер → ↓ ↓	Геббельс		
	↓ Алгебра			
	Гавер → ↓	Гевара →	Иегова →	Игумен
	Гомер →	Гамлет →	Гиммлер	
	↓ ↓			
	↓ Гоморра →	Геморрой		
	Гипер	Гиппократ	Египет →	Копты

	→	→		
--	---	---	--	--

Here a new concept is introduced: the core of the word. In contrast to the generally accepted division: root, prefix, suffix. The core of the words below is in bold. More often than not, the kernel does not match the root of the word. A compound word can have two or three or more nuclei. But more often there is only one nucleus in a word. All words in the following tables are systematized exactly according to the principle of the word core.

Further in the headings, asterisks indicate vowels, and consonants in the roots of words are listed in parentheses.

Only those words are left that are specifically associated with famous Jews, politicians, revolutionaries, democrats, freemasons, actors, writers, scientists, culture and art. And also with Jewish culture. Quite often, words related to Jews are associated with words related to dwarfs.

Обозначения:

(амер.фам) - американская фамилия

(арт) - артистический термин или фамилия

(био) - биологический термин или фамилия

(быт) - предметы быта

(воен) - военный термин или фамилия

(гео) - географическое название

(дет) - детское

(жар) - жаргонные слова

(имя) - имя

(иск) - искусство

(карл) - термин обозначающий карлика

(крим) - криминально известные люди и термины

(лит) - литературный термин или фамилия

(мед) - медицинский термин или фамилия

(миф) - термины и имена из мифов и сказок

(муз) - музыкальный термин или фамилия

(науч) - научный термин или фамилия

(пищ) - употребляется в пищу

(обув) - обувь
 (общ) - политика, общество или фамилия
 (одеж) - одежда
 (развл) - развлечение
 (рел) - религиозный термин или фамилия
 (рев) - российский революционер
 (руг) - ругательный термин
 (спр) - спортивный термин или фамилия
 (терм) - термин различного рода
 (терр) - фамилия террориста
 (тех) - технический термин
 (фам) - фамилия.
 (физ) - физический термин или фамилия
 (фр.фам) - французская фамилия
 (фут) - футбольный термин или фамилия
 (хим) - химический термин или фамилия
 (хок) - хоккейный термин или фамилия
 (экон) - экономический термин или фамилия
 (этно) - названия народов, этносов, термины этнологии
 (юр) - юридический термин

History itself.

The global history of mankind from the beginning of settlement to our era.

History is the most subjective science. Each new ruler "corrects" distortions in history, demolishes some monuments, erects other monuments. And so it happens from generation to generation. As a result, the whole truth of history is emasculated and distorted. And the story is turned upside down. And it would be fine only monuments. Each new ruler begins to alter the constitution to please himself, to abolish or introduce the death penalty, and to create other lawlessness.

The hypothesis of double settlement of humanity.

We start from afar so that the book is informative. Briefly. The hypothesis is substantiated that the resettlement of a person after leaving Africa occurs for the second time. The first resettlement ended 65,000 years ago with a military or genetic catastrophe and self-destruction of mankind.

According to the data obtained by scientists, about 130-150 thousand years ago, one rather large human tribe came out of Africa. From this tribe, after many mutations and cataclysms, people of haplogroups A, and possibly B (predominantly African population) have already survived in our time. And also, unlikely, haplogroups C, D, E and F. This tribe crossed the Isthmus of Suez and moved to settle to the north, south, east. It is possible that in this era there were collisions with more ancient anthropoid,

Neanderthals and the like. There were crosses. There were exterminations and genocides.

The man who came out of Africa possessed a bow, arrows, and fire. Therefore, the surrounding wild world won and settled. The resettlement took place due to the increase in the number of tribes, the development of new methods of hunting and farming, and internal conflicts. New tribes settled in Europe and Asia. Do not forget that there was no special biological and divine meaning in this resettlement. He was only moved by the energy of the Sun, continuously pouring onto the Earth in the form of photons and partially absorbed by plants, which gave birth to the food chain, at the top of which stood a man.

Scientists do not know what haplogroup was the first person to leave Africa. Perhaps it was not one haplogroup. Today scientists are discussing about such a tree.

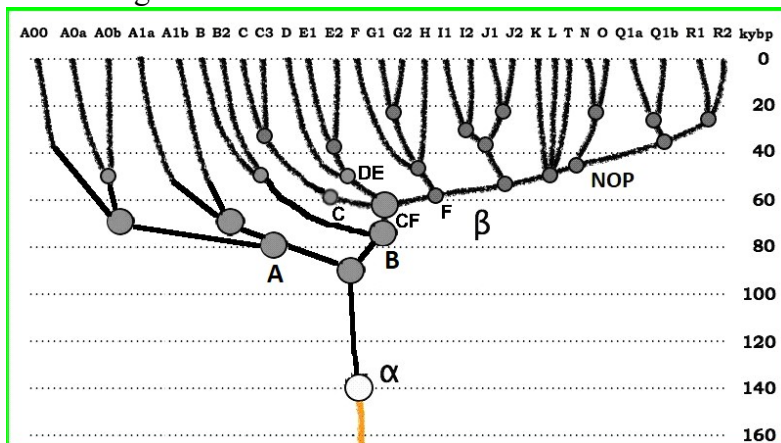

Figure 31.

Here, in Figure 31, the lines on the right show the time axis, BC (thousand years).

The process of human settlement has a fairly well-established picture in the scientific world. A mature human being, outwardly close to the modern one, leaves Africa about 130,000 years ago. And it begins to settle across continents and islands. The settlement takes place for about 65,000 years. At the same time, a person evolves in terms of mental capabilities, a civilization

arises. But about 65,000 years ago, an unknown catastrophe occurs and humanity is practically dying out. To date, only the primitive haplogroups A (and B, C, D, E?), The descendants of that very first tribe that left Africa, have been found in small quantities. The haplogroup also survived, which Klyosov denotes with the Greek letter β (or F?). All modern humanity then branched off and multiplied from it. All these haplogroups date back to a common ancestor, Adam, who lived about 130,000 years ago. There is still some uncertainty about the origin of haplogroups C, D, E, which will undoubtedly be eliminated by Professor Klyosov and his followers in the near future.

According to Klyosov, at around 65,000 years BC, some events happened that led to the extinction of 99.99% of humanity. What is the cause of the global extinction at the turn of 65,000 BC? Klyosov, as a serious scientist, does not engage in cheap political speculation. Like a war hypothesis. He suggests that this may have been due to the large eruption of the Toba volcano. It happened 70-75 thousand years ago.

However, in our opinion, due to the severity of the threat, a more politicized assumption makes sense. If you look at the chronological axis, then the extinction took place approximately in the middle (!) Between the exit of man from Africa and today. We know and remember that the man who left Africa 130,000 years ago was outwardly almost the same as today. That is, after leaving Africa, mankind had quite enough time for society to evolve to the current level of civilization, create nuclear weapons, chemical, biological weapons (and other types of weapons), unleash a war and practically destroy themselves. Only a couple of semi-wild tribes survived in the region of Africa, in the region of India or Indonesia, as well as in the mountains of Tibet.

For better clarity, we have added speculative ancient haplogroups to our haplogroup tree. These are the ramifications of the very first α -haplogroup. The result is shown in Figure 29. These haplogroups have settled for about 65,000 years. They mutated, branched, approximately as shown in Figure 29. As a

result of a global catastrophe, the entire α -settlement has practically died out. To date, only branched haplogroups A, B have been found in small quantities. And also, possibly, haplogroups C, D, E. The possibility of discovering 1-2 other ancient haplogroups from α -dispersal in the future is not excluded. So, here is how the picture of the "double" settlement of haplogroups looks hypothetically:

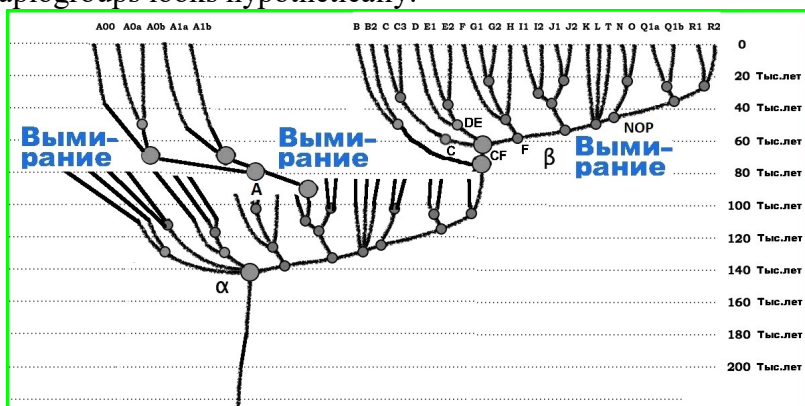

Figure 32.

After the global extinction, β -resettlement of the tribe surviving the disaster began. The β -branch also mutated, branched, multiplied. β -branch gave the existing haplogroups (B, C, D, E)? and F. Branch F, gave rise in its branches to most of the other haplogroups known today.

Of course, this table will be clarified, changed and supplemented with a more thorough chemical analysis. There will be surprises as well. But the basic skeleton of DNA genealogy is already there. Work with haplogroups is being carried out in many countries, in many laboratories.

Geographically, the second β -settlement is drawn to us approximately as follows (<https://www.wikipedia.org/>):

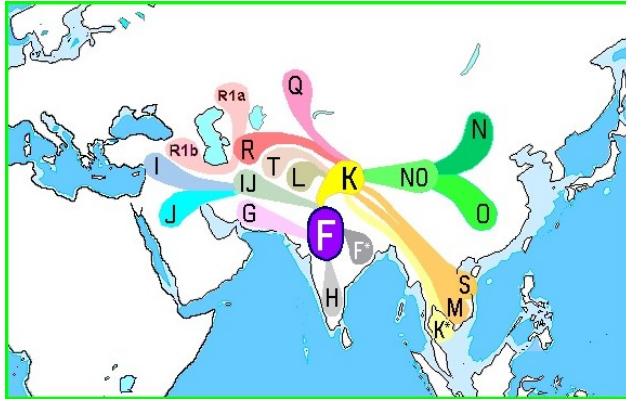

Figure 33.

We have a slightly different opinion on how this resettlement took place. Our opinion will be presented below, in Figure 34.

The version of a nuclear catastrophe suggests the inevitability of a repetition of such a catastrophe. Worse than that. Perhaps there were even earlier similar civilizations and catastrophes. For example, in the evolution of the more ancient Neanderthals. It's just that no traces of previous civilizations have survived. And what can survive on Earth in 65,000 years ?! Perhaps the stone idols on Easter Island. Or ancient megaliths, objects carved in stone, which are sometimes discussed in the media, but then for some reason these discussions quickly cease. These are plots for Hollywood. Humanity today is entering a very serious, symbolic conflict between collectivism and individualism. Also, the conflict consists in the cohabitation of biologically more progressive people (their minority) with the bulk of humanity. How to be? Where to Evolve? On the path of solitary lions with female prides or on the path of collective packs of jackals? Or should each country choose its own path? Or leave everything to chance? And is it necessary to evolve at all? The choice is very difficult to make. And nobody knows him. As they did not know at the turn of 65,000 BC.

Collectivism in our era is mainly focused on the places where haplogroups N and O live, that is, in the north of Russia, in China and Southeast Asia. And individualism has taken root in the form

of democracy in the United States and Western Europe. That is, the countries of settlement of the haplogroup R1b. Partly in India and European countries of settlement of the haplogroup R1a. And it is precisely between these groupings of countries that a world nuclear conflict is brewing. In addition, there are religious circumstances. The countries of democracy are mainly the countries of Christianity. The countries of collectivism tend to atheism. There are also countries of Islam. In them, there is no certainty in the choice between collectivism and individualism. But the place of a woman is clearly and unambiguously defined: to give birth and no entertainment.

This is what the modern alignment of population and religions looks like © Dubinyansky:

Population			
O + N	1 788 642 109	25,4%	Mongoloids
R1b + R1a + I1 + I2	1 516 135 270	21,5%	Aryans

Figure 34.

Religions			
1.	2 419 000 000	33,0%	Christians
2.	1 650 000 000	22,7%	Muslims
3.	948 507 000	14,5%	Hinduism
4.	468 736 000	7,0%	Buddhism

Figure 35.

These are the main population groups that influence world politics. But of course these groups influence politics only in times of peace. In the event of war, technologically advanced countries and peoples will play the main role. That is, the Mongoloids (+ Russia?) Versus the Aryans (+ Russia?).

Serious developments in the structure of all mankind are needed in order to reconcile everyone. In order to non-conflict place different types of people in the structure of employment. And also in the power structures of states. As well as strict rules against

possible injustice and against incitement of enmity between layers of humanity. We must not repeat previous extinctions.

The question also arises: why evolve further? We are so unattainably detached from the wild world. Why evolve? Afraid of space aliens? Or a global volcanic eruption? Or should we be afraid of the uprising of our earthly marginals?

The Mouse Paradise Experiment.

Everyone knows this experiment with mice. Unfortunately, there are so many videos on YouTube that we have not decided on the original source. When a small tribe of mice was placed in a large and landscaped area, provided by all means. And most importantly, protected from predators. For several generations, mice have rapidly multiplied and populated this area. However, further deviations in behavior began, "gays" appeared, madmen, freaks, schizophrenics, etc. appeared. And after a while, the whole tribe of mice became extinct. It is possible that humanity can expect the same fate. Because it also broke away from the wild and lives without predators. Only in humanity, due to the large numbers and territories, the process will proceed slowly, on the order of thousands of years. Scientists interpret this mouse experiment in relation to "communism." However, with humanity, this can happen in any social order.

Why are there so many freaks and morons in Russia? According to my personal observations, the number of congenital abnormalities in Russia is about 20%. According to official statistics, even more. A separate chapter above is devoted to this topic. If the number of freaks grows, then this can also cause the extinction of humanity.

About the role of Jews in all historical events.

One should speak about the role of Jews in all historical events. Our opinion is as follows. No Jewish nation or haplogroup existed in ancient times. But always, in every nation, in every haplogroup,

there was an avant-garde, people with liberal thinking, who became leaders, leaders, commanders, and led the nations. They began to realize themselves as a separate nation already in our era, in Khazaria. And this caused them significant harm. Their role in history is very important. In every nation, they exist in a mixed state with the chromosomes of other people in one percentage or another. The percentage of Jewish genetics in every nation is about 5-10%. Today, another attempt has been made to create a separate Jewish state of Israel. Perhaps this makes sense for saving Jewish genetics from the Holocaust. Our opinion is that without the exchange of genes with the rest of humanity, Jewish genes will die out, and after 1000 years, the usual Arab state of Israel will remain in the dry residue, with normal 5-10% of Jewish genetics, as in other countries. Nature will come to its normal equilibrium state.

All peoples have a Jewish vanguard. There are Georgian Jews, there are Armenian Jews, there are African Jews, there are Chinese and Korean Jews. Jews are not a nation. This is a sign, like bald, or fat, or thin, or with an ear for music, or smart, well-read, etc. Yes, all fat people can gather in some Israel and declare themselves a nation. And even live together for a while. But after 50 years, problems will begin. Degeneration will begin. Even more fat and unviable children will be born. Mutual hatred will begin, etc. etc.

All political events, wars, are waged by the vanguards of the peoples, that is, by the Jews. But not by Israel, but by the Jews of their people. At the same time, wars are carried out on behalf of the peoples and the peoples then bear responsibility for all events. Thus, the German people are still paying compensation for crimes committed on the orders of the German Fuhrer, the German Jew Hitler. And he pays it out because it was a German Jew. Likewise, it is no secret to anyone that both Napoleon and Macedonian were Jews. But it is believed that the wars were fought by France and Greece, respectively. In much the same way as Barcelona is considered a Spanish team and PSG is a French team. Although

players from other countries play the main role there. This once again underlines the surrealism and turbulence of what is happening.

Jews and Gypsies live by the same principles. Only gypsies live in a small way. They come to the village, settle in, arrange a circus, fun. Then at night they rob the population and leave. And the Jews live in big ways. They come to the country, arrange culture, civilization, democracy. Then they rob the whole country and leave. That is why civilizations suddenly arise and suddenly stagnate.

On the historical meaning of the church and religion.

There is a secret meaning in the church, which is not obvious to anyone. But this meaning is extremely deep and extremely logical and correct. Yes, the church is a lie, deception, fooling the people. BUT. Cunning and clever people multiply in the church sphere. It is no coincidence that all medieval scholars came from the church. And for classical science, without giant colliders, the church has all the conditions.

Throughout the ages, the Church has helped celibate women get pregnant. The church has a good selection of monks for intelligence, they don't take fools there.

The main meaning of religion is worship of the unknown. Before thunder, lightning, rain. This is the essence of religious feeling. But, as the people say, there would be a feeling, and there is something to fill it with. Admiration for the unknown gives rise to the desire to know and understand this unknown. And this is already a step towards scientific knowledge.

Two of the oldest traditions can be found in the customs and procedures of religion. The first tradition is worshipping an idol, supposedly God, in order to ask him for the harvest and prosperity. And the second military tradition, when you need a banner, motto, slogan, bogey for the offensive. At the same time, the enemy was declared sinful, bad, "unfaithful." And the attackers themselves were considered noble, progressive and

positive in everything. Roughly like the Bolsheviks led by Stalin. Who is always in a white jacket. Or under the leadership of Lenin, who is always a genius and at the same time in a proletarian cap. And in case of victory, all these military attributes gradually became objects of admiration. Religious rituals and prayers began to be performed over them. Temples were built for prayer services. These procedures were overgrown with selfish people, swindlers, and all this trend was overgrown with legends and gospels. This is how religion was born.

For the origin and role of Christianity, see above in the section Linguistics.

There are only two types of government.

Namely: a state built according to a given plan and a state that will turn out by itself if everything is left to chance and a state of complete chaos and anarchy. Alas, it is very difficult to build according to a given plan, and there is no plan itself. Everything that Marx and the like were croaking about turned out to be unrealizable. However, today in China a state is being successfully built according to a given plan. And the whole world is watching with interest how everything will end there.

Well, if left to chance, then totalitarian states, despotisms are born, at the head of which are usurpers and keep the people in poverty. Like today's Russia.

From the beginning of settlement to 40,000 BC.

What are inflectional and agglutinative languages.

What are inflectional and agglutinative languages. Inflectional is like Russian, with separate, very long words, suffixes, etc. Agglutinative language is when several short words, sometimes a whole sentence, are gathered into one big word. Like: "Bambarbia kergunu" - means that "if you do not agree to steal the bride, they

will redress you." (Joke). Or, as mentioned, the phrase "cut your nose" simply means "remember."

Contrary to the assertions of some linguists, that speech was inherent in "people" a million years ago, or even more, reflects the emotions of these linguists rather than their knowledge of the structure of the vocal apparatus of archantropists. We have no information about how much the vocal cords of "people" a million years ago were equipped with muscles that tighten them. Perhaps the development of this anatomical feature also accompanied the evolution of primitive man in parallel with the development of the brain and an increase in the volume of the cranium. Primitive people published some kind of mooing or barking, but nothing more.

Resettlement of man from Africa.

The following figures are taken from various sources and are not always unambiguous.

According to the data obtained by the respected professor Klyosov, about 65,000 years ago, the β -flow of settlement began (in Klyosov's terminology).

Resettlement began tentatively from Hindustan or a nearby island. These are such haplogroups that survived after the extinction of the first wave of settlement, which again began to branch out and spread across the globe. One of the branches gave rise to the haplogroups C, D, E that have survived today. The other was the F branch, which gave rise to most of the other haplogroups known today.

The first human genera were African haplogroups A and B. According to various sources, haplogroup A appeared 80-60 thousand years ago, that is, even before extinction. Relatively few representatives of this haplogroup remained in Africa, in particular in Ethiopia and Sudan, and among populations with clicking tongues. Populations with this haplogroup are scattered throughout the continent in spots. It seems that this is all that remains of the most ancient haplogroup A.

Then an ambiguity crept in, mixed the β -flow of settlement and haplogroup B. This is what the similarity of spelling means. Therefore, we leave the reader to figure it out for himself, this is not our main topic.

Haplogroup B formed about 60 thousand years ago from the composite (at that time) haplogroup BT, which appeared 65 thousand years ago. The territory and frequency of occurrence of haplogroup B is approximately the same as that of haplogroup A, but Central African pygmies and South African coisans are added (haplogroup B2b). The Bantu language is widely spoken among the carriers of the B2a haplogroup.

The consolidated haplogroup CF (?) Was separated from haplogroup B. Or from the β -flow of settlement?! But it doesn't matter. This happened about 55 thousand years ago. Haplogroup C (?) Spun off from this combined haplogroup 50 thousand years ago, its carriers migrated to the east, and part of its trail remained in the south of the Arabian Peninsula, the rest through Pakistan and India, Sri Lanka and through the rest of Southeast Asia went to Australia ... Subgroups of this haplogroup are observed in Japan (C1), Polynesia, Melanesia and Papua New Guinea (C2), Southeast and Central Asia (C3), among the aborigines of Australia (almost exclusively C4).

From the consolidated haplogroup CF 50 thousand years ago, the consolidated haplogroup DE spun off, which in turn formed haplogroup E, which spread across North Africa and Europe, and D, which migrated to India and further across Asia. D1 carriers live in Tibet, Mongolia, Central Asia, Southeast Asia, D2 - almost exclusively in Japan. Haplogroup E may have appeared in Northeast Africa, but the Middle East region, from where it could have got to Africa, is not excluded. The fact that there is practically no haplogroup F in Africa, but more than 90% of people on Earth have haplogroups descending from F, may mean that it was formed outside the continent. This is confirmed by the theory of the second resettlement from India.

Haplogroup G, which presumably branched off from F about 40-30 thousand years ago in Northern Mesopotamia, is observed mainly in the Caucasus, Iran, the Middle East, and the Mediterranean, but it is almost absent in northern Europe - less than 2% of the population. In southern Europe, it reaches 8 - 10% of the total composition of Spain, Italy, Greece, Turkey. Haplogroup H was formed from F also about 40-30 thousand years ago, presumably in India, and basically remained there. This haplogroup came to Europe with the Gypsies in the form of the H1 subgroup.

The consolidated haplogroup IJK, formed from F in the Middle East 50-45 thousand years ago, first separated the consolidated haplogroup IJ and a separate haplogroup K, then divided into I and J. Then J and dispersed across Asia, the Middle East, the Mediterranean and further across Europe. Moreover, haplogroup I first arrived in Europe, apparently from the Russian Plain, where it migrated through the Caucasus Mountains or bypassing them.

Logic suggests that the first Caucasians had haplogroup I. Part of haplogroup I went to Europe, and part went to the Aral Sea region. To the region of the Fergana Valley. Where the borders of the four Soviet Asian republics converge. Where this haplogroup lived happily for many millennia in anticipation of the emergence of haplogroup R in Altai. Then haplogroup R1 moved towards the residence of haplogroup I, where they met. A possible bloody "merger" took place, as a result of which the males of haplogroup I were partially exterminated, and the beautiful women of the tribe I of the European type were taken for reproduction. Then, several thousand years later, the European type of the population almost completely won out among the haplogroup R1. Thus, haplogroup I arose earlier and populated Europe much earlier than haplogroup R and all its derivatives. But she did not stay in Eastern Europe, but went to the warm West. After many thousands of years, Eastern Europe was inhabited by aliens of the R1a + I2 haplogroup.

Today haplogroup I (as part of two main subgroups - I2 ["Balkan", which it should be called the "Russian Plain haplotype"] and I1 ["Baltic" or "Scandinavian"]) covers about 20% of Western Europeans, being the second largest after haplogroup R1b1. The names of these haplogroups are again conditional, and are given here simply for orientation, because the indicated territories contain the largest proportions of these haplogroups. There are practically no haplogroups I1 and I2 outside Europe. True, the composition of the US haplogroups is unknown.

The assumption that haplogroup I arrived about 45 thousand years ago on the Russian Plain is justified by the fact that the Russian Plain has a large number of archaeological sites dating back to that time. No other haplogroups can explain them. Further, carriers of both I and R1a1 and R1b1 are Caucasians. And they became Caucasians in parallel in different parts of Eurasia. It just happened at different periods in time. Initially, haplogroup I apparently had a European species. And later, as a result of cohabitation, R1 acquired a European species, and from it R1a and R1b.

Finally, the sites of Caucasians were recorded between 45-30 thousand years ago in Europe and 24 thousand years ago in Asia (Baikal region), while haplogroup I was not found in Siberia. This means that haplogroup R left Siberia 17 thousand years ago through Mesopotamia and Anatolia, mixed with haplogroup I. Later, haplogroup R1a and I2 from Greece moved to Eastern Europe and again. Well, further through the Ukraine and the Urals, the R1a group has already settled.

Haplogroup I is the oldest haplogroup in Europe, definitely appearing there over 30 thousand years ago. Some data indicate that haplogroup I inhabited Europe from the Russian Plain, and R1 - Central Asia (along with Mongoloid haplogroups).

Haplogroup J1 is observed mainly in Arabs and Jews, whose genealogical lines diverged about 4000 years ago, in an interesting accordance with what is stated in the Bible and its interpretations.

Ironically, Jews and Arabs, including the Palestinian Arabs, largely share not only the J haplogroup, but also its J1 subgroup. They are close DNA genealogical cousins. Haplogroup J2 is observed among the inhabitants of the Mediterranean - Greeks, Italians, as well as many Jews from the Middle East. There is a lot of it in India.

The consolidated haplogroup NOP branched off from haplogroup K about 40 thousand years ago to the east of the Aral Sea, and later split into N, which inhabited Northern Siberia; Oh, who migrated to South Asia; and P, which left for southern Siberia, and split into Q and R. The same haplogroup K gave the haplogroup L and M. The first is observed mainly in India and Sri Lanka (as subclade L1) and Pakistan (L3), haplogroup M is mainly located in Papua New Guinea, where it numbers from one third to two thirds of the haplogroup M of the entire planet. The narrow-eyed Yakut and Chinese - Korean - Japanese groups are explained below.

Here's another example of what the modern population distribution looks like.

© Dubinyansky:

Population			
O + N	1 788 642 109	25,4%	Mongoloids
R1b + R1a + I1 + I2	1 516 135 270	21,5%	Aryans

Figure 34. (Repeat)

And here is how we see the resettlement of the mother group NOP. This is not our whim, not an invention, we give a full rationale for this below.

Figure 36.

The total population of the Globe until the last 10,000 years was in the range of 5-10 million people. If you distribute this throughout Europe, Asia and the Middle East, you get a very low density. People lived along rivers and the sea coast and did not particularly interfere with each other. However, if the tribes happened to collide, then there was no mercy. There were no negotiations. Apparently there were no languages either. There was just a set of shouts, voice signs. The level of today's Russian obscene language. The victors destroyed the men, or took them into slavery, and the women were taken as wives or raped and left at their place of permanent residence. Thus, new peoples were born. The closeness of tribes was determined by the closeness of linguistic sounds. Apparently, the β -flow of settlement was no longer Negro, but yellow. With varying degrees of color. In the process of resettlement, skin lightening was observed.

Haplogroup Q, which spun off from P, is observed to a large extent among the Siberian peoples, as well as in the American Indians, including the descendants of the Mayan tribes. There is a lot of this haplogroup among Ashkenazi Jews, which is attributed to Khazar times, since the common ancestor of this haplogroup among Jews is not more than a thousand years old. This indicates that men of haplogroup Q took Jewish women as wives, or killed Jewish men and captured women. It is worth remembering that only 500 years ago, the Jews as part of the Europeans sailed to America and severely took revenge on the Indian haplogroup Q.

Haplogroup R gave rise to the most famous haplogroups - R1a and R1b. R1a is considered a marker of Slavic peoples and is most represented in Russia (on average 48%, and in Eastern Europe (Poland, Ukraine, Belarus, Czech Republic, Slovakia, about the same proportion in the populations). In Central Europe and Scandinavia, it is about 15-20 %. And also in India, in the same proportions. In the Atlantic regions it is almost absent, sometimes at the level of a few percent.

So, having gone beyond Africa about 130 thousand years ago, carriers of almost all haplogroups formed during migration, except for haplogroups A and B, which remained in Africa, and haplogroup C, which went along the Indian Ocean to Australia and Oceania, and partly to the north, to Southeast Asia, migrated to the Middle East, stretching from southern to northern Mesopotamia, that is, to the southern Ciscaucasia, the south of the Caspian Sea and the west of the Iranian Highlands. It was about 55-50-45 thousand years ago. It was the area of the primitive Nostratic language, or Babylon. Its echoes will be found in almost all non-African languages of the world.

Initially, the Caucasian haplogroup I left for the Aral Sea region. Then, about 40-30 thousand years ago, it went partly to Europe, and its carriers became the first people of Europe. And part of it remained between Baikal and the Aral lake. Where, after living for several millennia, it mixed with the haplogroup R1, and everyone eventually became Caucasoid. Their language was the same as that of haplogroup R1, that is, with a bias either in the future inflectional language of haplogroup R1a1, or in the future agglutinative language of haplogroup R1b1 and, possibly, haplogroup Q (future Siberian peoples and American Indians). In any case, both languages will end up in Europe in 35 thousand years.

Resettlement of mankind in the last 40,000 years.

Using logical methods, it is possible to reconstruct a picture of some of the tribes' movements starting from a time of 40,000

years ago. So, about 40,000 years ago from the tribe of haplogroup K, which reached Central Asia, the NOP tribe separated, which went north, to Altai and to Baikal and became the embryo of the most numerous and significant races and nations of our time. Both quantitatively and qualitatively.

Figure 37.

About 40 thousand years ago, the first people of the NOP haplogroup appeared on the territory of Altai (see figure). From which came the main modern haplogroups. This data is slightly inconsistent with data from other sources.

Figure 38.

The NOP haplogroup was divided into two groups: NO and P. The NO group gave rise to all modern narrow-eyed peoples: Chinese, Koreans, Japanese, as well as all Russian narrow-eyed peoples: Sakha-Yakuts, Chukchi, Evenki, etc. Group P gave rise to the American Indian Q group and the Aryan R group.

Tribes I moved to the north, to Europe and the Aral Sea region. Those who went to Europe became the oldest population in

Europe. Where they left a memory of themselves in the form of parking lots. Those who went to the Aral Sea region settled in the area between lakes Balkhash and Baikal. During a long stay, group I mixed with group R1. Both groups, as a result of mixing, became Caucasoid. Later, the I1 group, together with the R1b group, went partly to the north-west, through Eastern Europe to Anatolia. Arc part to the south. And the I2 group remained in a mixed state with the R1a group. Yes, it is possible that the languages also have something in common from the mixing of the groups R1 and I. Perhaps this is precisely the mystery of the attraction of the groups R1a and I2.

The J tribes partially settled on the Arabian Peninsula, Anatolia, the Caucasus, Asia and Europe. The J tribes turned out to be very dynamic, they subsequently created Islam, and these countries and peoples today are actively multiplying and settling around the globe. The G tribes settled in Asia and the Caucasus, partly in Europe. The H tribes remained in India and the surrounding territories.

Stage one. 40-30 thousand years BC.

Approximately 40-30 thousand years BC, people of the NOP haplogroup, who lived in southern Siberia at that time, split into groups NO and P. The total number of people living in Siberia at that time was about 10,000-100,000. Less than one million. Just scattered living or nomadic tribes. Perhaps several related tribes living close to each other. What we depict in the pictures took place on the territory of Russia, so we took the territory of Russia as the basis for the illustrations. Although, of course, with further resettlement, some branches left the territory of Russia. And some haplogroups, on the contrary, came to the territory of Russia.

How did the separation of a tribe or haplogroup take place? A strong clan gradually accumulated, according to grandfather, father, brothers, sons. Means one haplogroup. He began to conflict with the leaders and then left. This is how the carrier of the NO haplogroup left. In about the same way, the carrier of group P left.

And the tribe that remained, apparently later disappeared into the peoples.

Situation 40,000 BC.

Figure 38.

The uterine haplogroup NOP is divided into two parts. Haplogroup NO went north, apparently in that era there was a warm climate. Perhaps because the Siberian rivers flow to the north, so people "believed the rivers" and settled along the course of the rivers to the north. Without assuming that they are waiting in 1000 or more years.

The emergence of the Mongoloids.

And they were waiting for a strong deterioration of the climate. Cold snap. People did not know where is north or south. People had no idea that it was warmer in the south and colder in the north. A person's outlook was limited to 5-10 kilometers of walking. At such distances, it is impossible to sense climate change. Climate change can be felt today by traveling south or north by train for four hundred kilometers.

Perhaps the NO group from the south was held back by the warlike tribes of other haplogroups. In general, one way or another, the NO haplogroup was "frozen" in the northern part of Siberia. A fatal choice. Where it existed in a cold climate, snow storms and snow blindness (the main cause of narrow-eyed) for about 20 thousand years. These tribes have gone through the bottleneck. This made people narrow-eyed, and also due to climatic difficulties of survival, crowded living, problems with

hygiene, cold, highly collectively dependent, collectively devoted, and collectively tolerant. Such living made people less aggressive in their behavior with each other, but with an increased sense of greatness. It is not surprising, because they survived in such cruel conditions. That is, it left an imprint on the structure of the brain. In our opinion, it was in this layer of human settlement that the concept of social justice was born. And justice in general. There is undoubtedly an outgrowth in the brain called "justice." However, here was born a dislike for "upstarts", "egoists", "talents" which is not inherent in all other human races. In these haplogroups, the concept of "hierarchy", the concept of "position oneself", "position oneself" was born. In these haplogroups, the concept of "arrogance", even inadequate arrogance, was born. Because one can survive in Siberia only with inadequate arrogance. To summarize: in haplogroups N and O, all of today's elements of collective human behavior were worked out. Although many of these elements are present in other haplogroups.

Mammoths could not withstand such a climate, although they fought desperately and for 20 thousand years managed to grow thick wool. But of course people exterminated them. Most likely Mongoloids. And today it is the duty of the geneticists of China and Japan to restore the mammoth population!

The fact that the people of the NO group became less aggressive with each other manifested itself already in our era, when the reduced aggressiveness, restraint of the NO tribes kept them from many wars and extermination. They kept them from invading other peoples. Although the hybrids of these haplogroups made such invasions and very successfully. As a result, today the N and O groups have the largest numbers in the world (Figure 34). And let us remember that it may have been peacefulness, unwillingness to fight with neighbors, and made them choose the northern direction of settlement. What is primary and what is secondary?

It is very likely that the tradition of eating dogs in Korea and China originated precisely in that ancient era, when their ancestors had to eat wolves that followed in the footsteps of people and

deer. Here are the countries where dogs are eaten: China, Vietnam, North and South Korea, Indonesia. As you can see, these are all Mongoloids, people from Siberia. There are also Switzerland and Nigeria. But Switzerland is a dwarf, and eating dogs is more of a fun there. And Nigeria is more likely from a lack of food. Moreover, judging by the name, Switzerland (Haver-Tsariya) was greatly enriched by the Finno-Ugric = Yakut-Slavic genes. Which led to dog eating.

Moreover. It was the Siberian natural rigidity that made the Mongoloids unshakable, the Yakuza. And when they crossed with the Slavs, this created a new race of Great Russians. A race of inadequate, pathological sense of greatness. The race, which conquered 1/6 of the earth's land, crushed hundreds of peoples, including the Slavs themselves, and does not stop there. Who does not understand why she does it. She thinks other nations are pleased. And alas, which is genetically unstable, breaks down into its original components and degenerates, producing a mass of defective people. With which modern Russia is filled. About this in the corresponding chapter about ugliness.

There is one more hypothesis. In an unknown way, Yakut skillful genes jumped into R1b. And since then they have been leading the world. This is not surprising given how difficult life was for the Mongoloids. They learned to do everything and survive under any conditions. And these Yakut genes, mixed with the Aryans, went around the whole world and defeated all peoples. They have reached heights in science and technology. And in the end, having gone around the entire globe, they again encountered the Mongoloids. And today there is a threat of NATO war against China.

Stage two. 30-20 thousand years BC.

Groups R and Q separated from haplogroup P after several millennia. Haplogroup R partially moved to the southwest, and haplogroup Q partially moved to the northeast. Of course, there were contacts between all the listed haplogroups. Most likely, the

contacts were military, with the extermination of men and violence against women, which created some hybridization. You should not attribute any Christian traits, humanity, and so on to ancient people. The one who was ruthless survived. They were more animals than people.

Meanwhile, the NO haplogroup has been surviving for 10,000 years (500 generations) on the shores of the Arctic Ocean and along the banks of northern rivers. Mastering the art of hunting deer, herding reindeer and fighting wolves, bears and the cold. And the genes for narrow-eyed were fixed in it due to the blizzard and snow blindness. As well as wolf and dog eating.

Chronicle. 25,000 BC People cross the Bering Strait, connecting Asia with America [1].

Situation 30,000 BC.

Figure 39.

Formation of European appearance.

It is very likely that 25 thousand years ago there was a mixing of haplogroup R1 and haplogroup I. In all likelihood, this happened in the Aral Sea region, in the Fergana Valley, because there is a good climate and the presence of the Slavic population in the Fergana Valley is a distant echo of such a meeting today. Since both R1 and I are Caucasian today, this could not have happened independently in different parts of the globe.

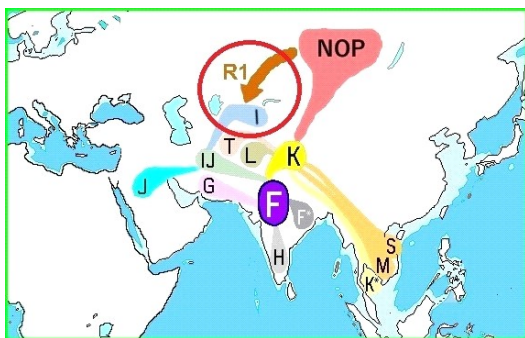

Figure 40.

The climate there was good, there was enough space for everyone, they lived here together for a long time, for many thousands of years. As a result, the European type of appearance was formed.

As will be seen from Figure 40, haplogroups I2 were distributed mainly among the Slavs. At the same time, the I1 group was distributed mainly among the erbins. This is no coincidence. What is the mechanism of such a relationship between R1a and I2 on the one hand and R1b and I1 on the other? Apparently after haplogroups R1 and I mixed in the area between Balkhash and Lake Baikal, they lived together for several thousand years, and after that they set off to explore new territories. They split into two streams and each settled, moved and evolved independently. And in one stream, after 5-10 thousand years of evolution, haplogroups R1a and I2 were formed, and in another stream, haplogroups R1b and I1 were formed from the same initial groups. All letters and numbers here are purely arbitrary. This is a very plausible explanation. But other options are also possible.

Haplogroup I2 settled in the Slavic peoples, and haplogroup I1 settled in western Europe. At the same time, the R1a and I2 groups retained their linguistic identity better, without especially mixing with other peoples. And the R1b and I1 groups picked up a lot from other haplogroups, being in the center of civilization in Anatolia, Egypt and later in Western Europe.

One moment is noteworthy. Analysis of the presence of haplogroups R1b and I1 in western Europe shows an approximately close ratio between the percentages of R1b and I1 in different countries. That is, R1b is 2 times more (approximately, give or take). This confirms the version of the coexistence of haplogroups R1b and I1 since the time of their departure from the Aral Sea region. However, there is a notable exception in this line of countries. These are the countries of Finland and Estonia, in which the haplogroup I1 is over 30%, and the haplogroup R1b is very small, about 5%. Was it measurement errors or haplogroup I1 that was the very original group I? Which single-handedly reached the Baltics? And already from it, from the spun off part of the group and moved to the Aral Sea region, the group I2 later occurred? In this case, the picture of the movements of all haplogroups will be different. Or the registration of haplogroups in Finland and Estonia is wrong.

A similar ratio of Russian groups R1a and I2. Approximately 4: 1.

In the end, let us allow ourselves the following statement. If for the formation of the European appearance it was necessary to mix different haplogroups, and if after mixing a certain ratio of the numbers of haplogroups was established, then these haplogroups will continue to exist together, in the same proportion, no one will divide them in any way. And the percentage will also be close to the original. So, for example, today the ratio R1a: I2 = 4: 1. R1b: I1 = 2: 1. That is, taking into account 15 thousand years of separate displacement, the order of magnitude is the same and the quality ratio is also the same. This can serve as proof of the correctness of our version of the emergence of European appearance.

Stage three. 20-10 thousand years BC.

So, the R1 group (together with I) split into two streams. Which began to migrate in their own ways. Without going into the

migration path, we note that the R1 group in one stream gradually evolved into R1a, and the I group evolved into I2.

Another pair of groups evolved into groups R1b and I1, reached Anatolia, but then did not want to swim across the Bosphorus, turned south and went to Africa.

Carriers of haplogroup I, divided into two main subgroups I2 and I1, already being mixed, respectively, with R1a and R1b about 15 thousand ago. It is believed that they practically did not go beyond the borders of the European continent. However, the US keeps a secret about its haplogroups. And if this secret is revealed, then perhaps in the United States there will be in the majority the same "explosive" mixture of R1b and I1. However, it is possible that there will be a large number of Finno-Ugric N, immigrants from the collapsed Tartary. Likewise, historians are not objective in their descriptions and tendentious in their preferences.

It is not known what kind of ancient language someone had, but it is possible that the Basque language is the ancient language of the carriers of haplogroup I. The fact that the Basque language is non-Indo-European is known. It is considered an unclassified, agglutinative language. If it turns out to be not Proto-Türkic, then most likely it is the language of the ancient carriers of haplogroup I. But if elements of Türkic agglutinative languages are found in it, then this is the language of the ancient R1b1b2. (According to Klyosov).

Approximately 20,000 BC, after 20,000 years of survival (1000 generations), haplogroup N and haplogroup O separated from the maternal haplogroup NO, after 20,000 years of survival (1000 generations). That is, the future Chinese, Japanese, Taiwanese and Koreans separated from the Yakut and Chukchi brothers. At the same time, haplogroup O (and partly N) moved south. It was a good choice. And the N group basically remained to live in the north of Siberia, getting used to deer, yurts, dogs, wolves, "cramped but not offended", feeding on aged dogs, wolves and

deer, and gradually settling in the north to the west and east. Apparently, sometimes entering wars with haplogroups Q, P, R. Chronicle. 18000 BC Pottery created. People are starting to use raw metals [1].

The situation is 20,000 BC.

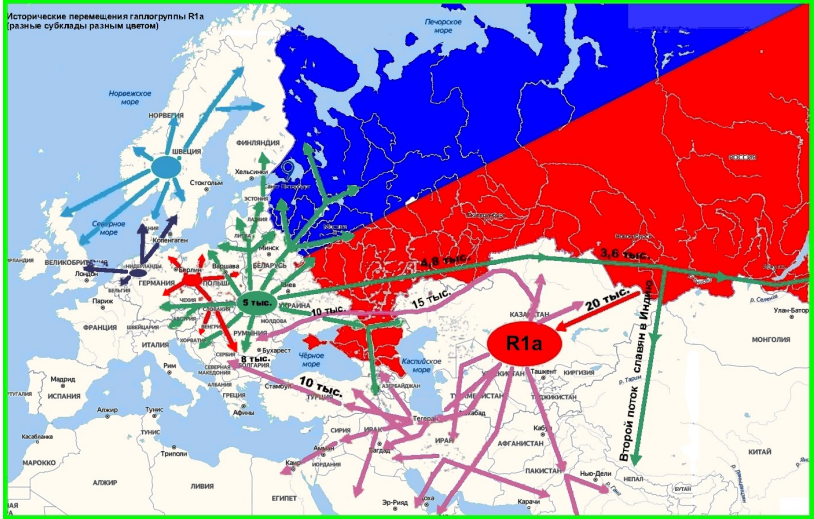

Figure 41. R1a + I2 migrations.

Haplogroup R1b (together with I1) left the territory of Russia. The trajectory of movement of haplogroup R1b is shown in the figure below. This is how the migration of haplogroup R1b looks according to information from the source https://avatars.mds.yandex.net/get-zen_doc/1640172/pub_5e72fefcde04135fd165b337_5e7312815af59a04d168725f/scale_1200. Gk.c. Plus added migrations from the point of view of Klyosov. A very bizarre picture is emerging. A compromise option is depicted.

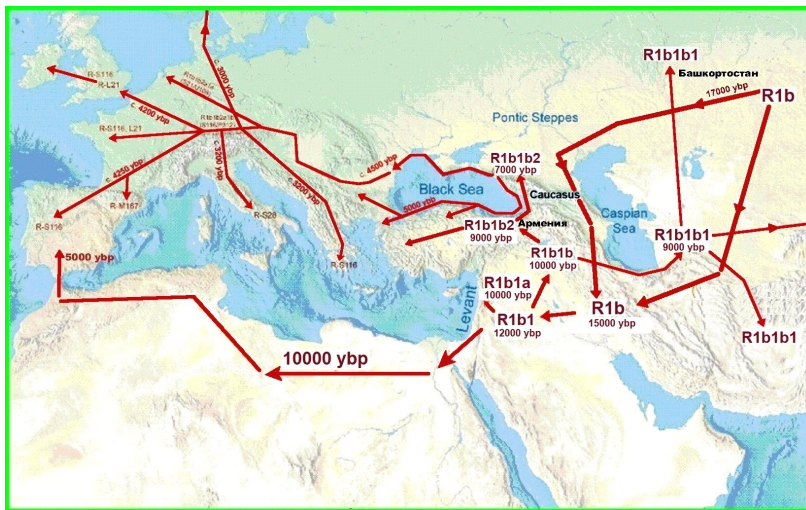

Figure 42. Resettlement of haplogroup R1b + I1.

According to Klyosov's materials, the "Turkic-speaking" haplogroup R1b moved from Southern Siberia, where it appeared 16-17 thousand years ago, through the territories of the Middle Volga, Samara and Khvalynsk (in the middle reaches of the Volga) regions. This is the era of the ancient pit ("kurgan") archaeological cultures and cultural and historical communities. 8-6 thousand years ago and later.

Stage four. 10-5 thousand years BC.

Haplogroup Q crossed the Bering Strait long ago and settled in North and then South America. Get to the southernmost point of South America. Haplogroup Q has partially dissolved in Asian peoples. Haplogroup P dissolves into Asian peoples. And although it gave birth to the great haplogroups R1a and R1b, it itself was depleted. Turbulence and unpredictability again.

How the resettlement of haplogroups C, D, E, F, G, J took place in Europe, 10.000 years BC, is a separate story. These were ancient wars, but hardly any records have survived about them. We leave the analysis of the routes of movement of these tribes to

other authors. Modern computer capabilities and the accumulation of a DNA database will make it possible to solve this problem.
Europe 10.000 BC.

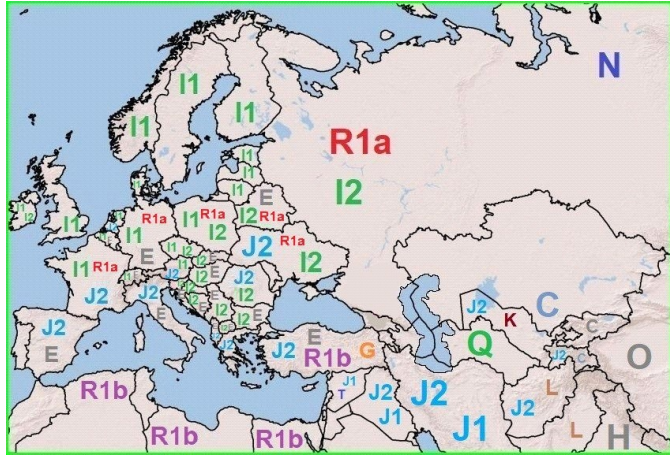

Figure 43.

As can be seen from Figure 43, the "mixture" of haplogroups R1b and I1 has penetrated the farthest north to the north. We did not depict the R1b group on the map of Europe, but we mean that it exists wherever the I1 group is.

Haplogroup J1 mostly stayed in Asia. Haplogroup J2 settled quite widely in Southern Europe, Asia, Anatolia and the Caucasus.

The common ancestor of the haplogroup R1b1 lived 6775 ± 830 years ago in northern Kazakhstan (for example, the Botay culture, recorded by archaeologists 5700-5100 years ago). Then they crossed the Caucasus to Anatolia (6000 ± 800 years ago, according to the dating of the haplotypes of modern Caucasians of the R1b1b2 haplogroup). And further and through the Middle East (Lebanon, 5300 ± 700 years ago; ancient ancestors of modern Jews, 5150 ± 620 years ago) passed to North Africa (Berbers of haplogroup R1b, 3875 ± 670 years ago). And then they crossed Gibraltar to the Iberian Peninsula (3750 ± 520 BP, Basques 3625 ± 370 BP) and further to the British Isles (in Ireland 3800 ± 380 and 3350 ± 360 BP) and to continental Europe (Flanders, $4150 \pm$

500 BP, Sweden 4225 ± 520 BP). The path to continental Europe from the Pyrenees is the path and times of the bell goblet culture.

In parallel, traces of ancient carriers of R1b are traced in the Balkans (4050 ± 890 years ago), separately in Slovenia (4050 ± 540 years ago), and in Italy (4125 ± 500 years ago). This is the beginning of the times of the Turkic languages in Europe and the disappearance from Europe of the "Proto-Indo-European" haplogroup R1a1, which inhabited Europe from 10 thousand BC.

The authors apologize for the occasional confusion such as "five thousand years ago" and "five thousand years BC". If only because the duration of "our era" also raises strong doubts.

In Figure 41, the bulk of R1b went south to Africa. But a small part went to Armenia. And from there they migrated by complicated routes to different places in Europe.

On the territory of Russia, the haplogroup R1b remains insignificant, in the region of Bashkiria and some other places. Russia 10 thousand years BC.

Figure 44.

The emergence of the people of the Great Russians (Finno-Ugric).

Chinese haplogroup O managed to break through all obstacles and populate the entire Far East. Becoming the basis for the peoples of China, Korea, Japan, Indonesia, Vietnam.

After the departure of the bulk of the Aryans from Russia (20-10 millennium BC), a certain "vacuum" formed in the Asian part of Russia. The autochthonous population of this area were groups N and O, and the remains of R1a, R1b. Plus various other groups have infiltrated here. And here, at the junction of these haplogroups, many Great Russian peoples of the Urals, the Volga region were born, and later they moved to Europe. Here the Great Russian people proper was born, as a mixture of Mongoloids and Slavs. Moreover, it was precisely as an aggressive mixture on the part of the attacking Mongoloids and mainly of the haplogroup N. This haplogroup became the "paternal" one for the Finno-Ugric peoples. In fact, these are Mongoloids, Yakuza in psychology, but acquired a European appearance. The genetic matrix remained Mongoloid, with an unshakable character, and very specific. All Volga-Ural peoples are mainly a mixture of Slavs and Yakuts in different proportions and in different eras. Plus, in the south, there is a strong admixture of Khazar (Chechen) haplogroups (16%), which conquered and forcibly converted many peoples to Islam.

Haplogroup N reached from Siberia in the north to the Ural Mountains and skirted them in the north. But she met resistance from haplogroups R1a and I2, who had already managed to swim across the Bosphorus from Anatolia and settled in central Europe.

The world's population is gradually increasing. Talented haplogroups R1a and R1b invent new technologies, devices, signs for writing. Languages, letters, texts appear. Around 8000 BC the neolithic revolution takes place. An agricultural lifestyle found in the Fertile Crescent / Middle East area. Cows and sheep were domesticated and crops were cultivated. Fun fact: The first domestic dog was found in Idaho, USA, 8400 BC. 6000 BC - the first beer brewed from grain in the Middle East. [1].

Stage five. 5.000 BC.

So, according to Klyosov, by 6 thousand years ago, carriers of haplogroup I, divided into two main subgroups I1 and I2, had inhabited Europe for more than 15-20 thousand years. They

practically did not go beyond the borders of the European continent. What language they had is unknown, but it is possible that the Basque language is the ancient language of the carriers of haplogroup I. Some linguists define the Basque language in the Sino-Caucasian linguistic macrofamily, which includes the Caucasian, Tibetan, Yenisei, Chinese and Burusha languages (private communication I. Byzova). Here we see a reflection of the path of a mixture of haplogroups R1b and I1 since ancient times, from Southern Siberia (Yenisei and Chinese languages), through the Caucasus (6 thousand years ago) to the Pyrenees (Basques). So the assumption that the Basque language is the ancient language of the haplogroup R1b is not devoid of connection with the data of linguists. Moreover, the Basque language has the same numeral system as in the Caucasian languages - 20-ary, and has common elements with the Semitic-Hamitic world, as well as the Sumerian and Hurrian-Urartian (private communication of I. Byzov). This is all - the path and surroundings of the path of haplogroup R1b to Europe.

The carriers of the haplogroup R1a1 are Aryans, if we proceed from the fact that it was they who came to India and Iran about 3500 years ago. In the 4th millennium BC, they began to spread throughout Europe, and 4750 ± 500 years ago they entered the Russian Plain. Over the next several centuries, they settled from the Baltic to the Caucasus, about 4500 years ago they were already recorded in the Caucasus, and about 3600 years ago they were already in Anatolia. This is consistent with linguistic and archaeological evidence and documentary evidence.

Anatolia can in no way be regarded as the "ancestral home" of the Indo-European language. From the side of Anatolia, the Aryans hardly advanced far to the east, and in any case not to India and not to the eastern part of the Iranian highlands. These were the local places of residence of the Aryans.

4000 years ago, carriers of the haplogroup R1a1 founded the Andronovo archaeological culture and reached the southern Urals. Archaeological excavations in the south of the Krasnoyarsk

Territory revealed that bone remains dating from 3800-3400 years have characteristic mutations of the haplogroup R1a1 (Keyser et al, 2009). Moreover, the haplotypes of these remnants were easily integrated into the haplotype tree of modern ethnic Slavs from Ivanovo, Penza, Tver, Lipetsk, Novgorod, Ryazan regions. In other words, these fossils and modern ethnic Slavs had the same common ancestor, who lived, as we already know, about 4,800 years ago.

About 3600 years ago, the Aryans (haplogroup R1a1) left the southern Urals in their part and moved to India. At about the same time, the Aryans of Central Asia, where they lived for at least five hundred years, moved to Iran. The common ancestors of the Indians and Iranians of the R1a1 haplogroup lived 4050 and 4025 years ago, respectively (Klyosov, 2009b), which is 800 years younger than the common ancestor of the modern ethnic Slavs of the R1a1 haplogroup. The haplotypes of the modern Eastern Slavs (haplogroup R1a1) are almost identical to the haplotypes of the Indians and Iranians. The coincidence is almost absolute. On this basis, it should be argued that the Aryans of the 2nd millennium BC, carriers of the haplogroup R1a1, are undoubtedly the descendants of the same ancestors as the modern ethnic Slavs. At present, at least 400 million descendants of the Aryans from the Russian Plain, and before that from the Balkans, live in India. This is if you take into account the Aryan women. Up to 72% of the highest castes in India belong to the R1a1 haplogroup (Sharma et al, 2009).

These ancestors of the modern Slavs, as well as many modern Ukrainians, Belarusians, Lithuanians, Estonians, Tajiks, Kyrgyz, namely the carriers of the haplogroup R1a1, brought their Aryan inflectional language to India and Iran, which closed the linguistic link between Europe and India-Iran, and announced the beginning of a new language family - Indo-European languages. 150 years ago A.F. Hilferding in his work "On the affinity of the Slavic language with the Sanskrit" (1853) wrote: "... The Slavic language, taken as a whole, does not differ from Sanskrit in any

constant, organic change in sounds. Some of the features found in it, somehow lisping p of Czechs and Poles, etc. developed already in the later, historical era and belong only to a few of their dialects, as a whole, I repeat, the Slavic language does not have a single feature alien to Sanskrit. This property is shared with him by the Lithuanian language, while all other Indo-European languages have obeyed different sound influences, which are exclusively characteristic of each of them separately. Thus, in lexical terms, the Slavic and Lithuanian languages are closely related to Sanskrit and together with it constitute a separate family in the Indo-European tribe, outside of which are the Persian and Western European languages. "

At present we know that the Persian, or Iranian languages, were also basically brought to the eastern part of the Iranian Highlands by the Aryans, carriers of the haplogroup R1a1, at about the same time as in India, but Aryans who have already lived for at least several hundred years (perhaps at least 500 years) in Central Asia. The beginning of the ancient Iranian languages is the middle of the 2nd millennium BC.

Thus, the words of Yu.N. Drozdova "According to the concept of linguistic science, the languages of modern European peoples belong to the language family, which is called" Indo-European ", although it is not possible to find a single ancient source in which any traces of the presence of Hindus or related peoples on European territory are recorded" reflect both the aforementioned categorical nature of the Türkologists (as well as the Iranianists) in relation to the opposing science, and the clearly outdated views of linguists, according to which the "Hindus" (or, to the same extent, "Iranians"), sometimes as an ethnic group, should be primary speakers of Indo-European languages in Europe. Indians, like Iranians, were recipients, not donors, of these languages. The "Indo-European" languages of that time were essentially Aryan.

To this it makes sense to add the following. Religions do not arise without a reason. Likewise, caste societies do not arise without a cause. Our opinion is that the religion of Islam emerged

as a response to the invasion of the Slavs in Central Asia and was aimed at the weaknesses and shortcomings of the Slavs, who were led, as always, by the Jews. To their vulnerabilities. For example, monogamy. And with the help of Islam and harems, Asia was able to largely "digest" the Slavs, as a result of which the percentage of haplogroup R1a in Iran, Iraq and Syria is not high. On the other hand, the caste society in India was also apparently created by the Slavs for their own preservation from the autochthonous semi-wild Indian tribes. Otherwise, if they mixed, the Slavs would be squeezed out of India. Exactly the same picture is observed in Russia today. Where, unfortunately, the Finno-Ugric peoples (Yakut-Slavic hybrids) squeeze out pure Slavs. At the same time, bogeymen of the "all peoples are equal" type are used. But at the same time, the Finno-Ugric in alliance with the Chechens are more equal than the Slavs and other peoples.

The linguistic landscape in Europe 6 thousand years ago, or at the turn of the 4th and 5th millennia BC, was the ancient Aryan language, the R1a1 language, and, possibly, to some extent the language (or languages) of the ancient European haplogroup I. Perhaps, part of Group I reached Europe alone and unchanged. At the same time, she retained her ancient language. The language of the latter could also be ancient Aryan, or it could be the proto-language of the present Basques, or it could be a now unknown language. The Türkic language was brought to Europe by the haplogroup R1b1b2 only about 4 thousand years ago, at the turn of the 2nd and 3rd millennia BC.

Based on the data of DNA genealogy, it was put forward and substantiated the position that in antiquity, up to the middle of the 1st millennium BC, throughout Eurasia, right up to the Atlantic Ocean, two language fields alternately dominated - Türkic (Proto-Türkic) and Indo-European, languages of haplogroups R1b and R1a, respectively. The carriers of these haplogroups migrated in opposite directions, with a time difference of 1-2 thousand years, but in many respects over the same territories, which confused linguists and archaeologists and led to the fundamentally incorrect

"Kurgan" and "Anatolian" theories of the "Indo-European ancestral homeland" ...

Haplogroup R1a1 was actually saved by the fact that 4800 years ago, at the beginning of the 3rd millennium BC, its carriers crossed from Europe to the Russian Plain, and settled the territories from the Baltic to the Black Sea, 4500 years ago. they were already in the Caucasus, 3600 years ago. in Anatolia (according to the haplotypes of the haplogroup R1a1 of modern Anatolia). Meanwhile, on the Russian Plain, they passed to the Southern Urals and further to Southern Siberia about 4000 years ago. At the same time, they founded the Andronovo archaeological culture, populated Central Asia (4000-3500 years ago) and about 3500 years ago. partly moved to India and Iran. Bringing there the Aryan dialects.

4500-4000 years ago, R1a1 disappears from foreign (in the current concept) Europe. Europe becomes Turkic-speaking with the arrival of carriers of the haplogroup R1b (beginning of the 2nd millennium BC). This continues until the middle of the 1st millennium BC. (3000-2500 years ago). When the haplogroup R1a1 overpopulates foreign Europe, and the reverse replacement of the Turkic languages with Indo-European takes place. Such a linguistic and haplogroup, or generic (in terms of DNA genealogy) striping in the Russian Plain, in Western Asia and in Europe led to incorrect linguistic and archaeological concepts.

A similar thing happened in relation to the "Anatolian theory", in which a private (Transcaucasian) branch of the route of movement of the Aryans, carriers of the haplogroup R1a1, to the east along the Russian plain was taken for the "ancestral home of the Indo-Europeans". This led to a fundamental distortion and misunderstanding of the fundamental role of the Turkic languages in the Russian plain.

It seems that the two Caucasian sibling gentes, R1a1 and R1b1, as described below, led two languages. One of them was the inflectional Aryan (language of the R1a1 genus), which was later called Proto-Indo-European, the other was agglutinative Proto-

Türkic (the language of the R1b1 genus). Both genera came from southern Siberia.

Genus R1b1, a carrier of agglutinative, ancient Turkic languages. The path from Asia to Europe, with arrival at the turn of 3-2 thousand BC. Modern Uyghurs, Kazakhs, Bashkirs and some other peoples of Siberia, Central Asia and the Urals in their part originate from the ancient genus R1b1 and have retained the same haplogroup in some percentage for 16 thousand years. This genus has historically moved from east to west, leaving, naturally, descendants along the line of settlement. These are the indicated peoples of Siberia, the Volga region, the Kama region, and Central Asia. And the ancient peoples of the Middle Volga, Samara, Khvalynsk regions. Ancient pit, it is "kurgan", archaeological cultures. And some Caucasian peoples who have retained the R1b1 haplogroup in their part. Both Turkey and the Middle East, whose population retained a lot of the same R1b1 haplogroup in their DNA (Abu-Amero et al, 2009).

Haplogroup R1a settled throughout Europe except southern. But no genocides and extermination of peoples by R1a were noted.

Haplogroup R1b crossed the Caucasus and settled along the North African coast of the Mediterranean and Black Sea. Where the climate is warm, the birth rate is high. More people, more wars. In those ancient times, no one knew any haplogroups. A person's belonging to a particular tribe was determined by his colloquial language. If a person cormorants in a foreign language, then he must either be killed or taken into slavery.

Before the invasion of the Erbins R1b through Gibraltar into Europe, something like this was the case.

Situation in Europe 5.000 BC:

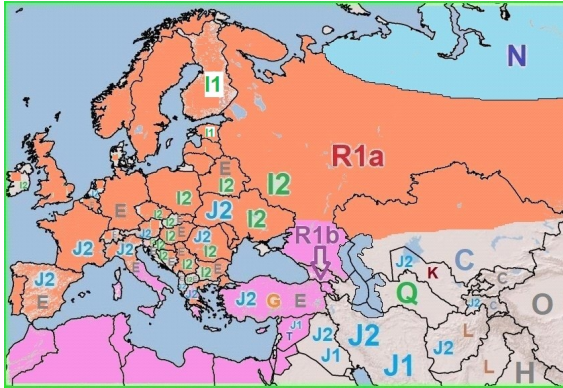

Figure 45.

Here in the figures, orange indicates the presence of the haplogroup R1a + I2, and pink indicates the presence of the haplogroup R1b + I1. It should be noted that haplogroup R1b passed through very hot countries and peoples and was greatly enriched with hot genes. And also absorbed the elements of these languages. As a result, the languages of the R1b group moved away from the R1a languages. While the haplogroup R1a easily settled and mixed with the tribes living in Europe. Mostly E, J.

The shattered skull period.

This is what Anatoly Klyosov writes.

About 4500-4000 years ago, something happened in Europe, as a result of which the haplogroup R1a1 from Europe practically disappeared. By the way, haplogroup I1 and, to a large extent, haplogroup I2 also disappeared at the same time. Soon after that, speakers of the Turkic-speaking R1b (mainly its subgroups R1b1b2) settled in Europe. There could be two main reasons - either the almost complete extermination of other haplogroups by the carriers of R1b, or between 4000 and 4500 years ago a major natural disaster occurred in Europe, and the Turkic-speaking R1b1b2 populated already practically deserted Europe. What was it? Glaciation? Evidence can be found to support one assumption and the other.

Most likely, the same thing happened that happened millennia later with the American Indians. The Turkic peoples are very merciless towards aliens, which can also be seen in the fate of the Armenians and Russian janissaries in Turkey.

The possibility of the first is indicated by the finds of many ancient human remains with crushed skulls in Scandinavia, dating back to about the same time, which even received the code name "the period of crushed skulls." Characteristically, many of the finds have revealed fragmented skulls of women and children (Lindqvist, 1992, 1993, 1994, 1997, 1998). This is echoed by the discovery in Germany of a group of 13 people, most of whom were children and women, most (including children) with crushed skulls and stone arrowheads stuck in the bones, dating back 4,600 years ago. Two boys (4-5 and 8-9 years old) and a man 40-60 years old were able to determine the haplogroup, and all three had R1a (Haak et al, 2008). Analysis of the scene showed that women, the elderly and children were killed during the absence of adults, apparently by a hostile tribe.

The variant of extermination of carriers of haplogroups R1a1 and I has a historical basis. Moreover, in Scandinavia, haplogroup I1 was (then and now) especially common, so that crushed skulls in Sweden could be attributed primarily to them. But a major natural disaster in Europe between 4500 and 4000 years ago cannot be ruled out. It was, in all likelihood, the largest destructive event in the history of civilization since the Ice Age.

Apparently, according to the standard scheme, the period of "shattered skulls" is associated with the "Indo-European invasion", not realizing that the "Indo-Europeans" (PS = Aryans) already lived in Europe since 12 thousand years ago, and there was no "invasion" of them from the west ... Later, from the end of the 3rd millennium BC. and over the next one and a half millennia, before moving to India and Iran, the vector of their migrations was directed to the east. The so-called "Kurgan theory" to the "Indo-Europeans", that is, to the carriers of R1a1, to the Aryans, had absolutely nothing to do, but referred to the carriers

of R1b, who were Türkic-speaking, and moved, indeed, to the west and further south, through the Caucasus to Asia Minor and further to Europe, as described above, moreover, a thousand or more years earlier than the Aryans. They also had nothing to do with "Indo", either linguistically or migratory.

Whatever the reason, the R1a1 haplogroup practically disappeared from Europe about 4500-4000 years ago, and the Türkic-speaking carriers of the R1b haplogroup settled in the deserted Europe. As shown a few lines below, almost all modern branches of the R1a1 haplogroup in Europe date back to 2900-2500 years ago and later. At the same time, there is evidence that the haplogroup R1a1 has been in Europe since 12 thousand years ago. Archaeological excavations have revealed the haplogroup R1a1 in Europe (Germany) 4600 years ago (see above). In other words, in Europe with R1a1 there is a gap between the mid-end of the 3rd millennium BC. (4500-4000 years ago) and lasting a thousand - one and a half thousand years. At the same time, there is no gap in relation to R1b1b2 in Europe, their settlement is a continuous stream from 4000-4200 years ago, without stopping.

P.S. these thousand - one and a half thousand years evoke the memory of a thousand - one and a half thousand years, added by Scaligerian historians - liars. However, at a superficial glance, there is no connection here. But if deeper ?! ...

As a result, Europe apparently became Türkic-speaking. R1a1 remained only on the Russian Plain, the descendants of those who moved there about 5 thousand years ago. A few centuries later, about 3500 years ago, the surviving descendants of the R1a1 haplogroup that had disappeared in Europe by that time will bring their haplotypes, and the Aryan language they preserved, to the Urals and Central Asia, to India and Iran, to Siberia. The common ancestor of all these branches of the haplogroup R1a1 lived on the Russian Plain 4750 ± 500 years ago. This is again the data of DNA genealogy with inevitable linguistic conclusions. It is known that the Aryan, Proto-Indo-European language was introduced to India and Iran. It can hardly be assumed that the same genus R1a1

brought some other language to the Urals and South Siberia at the same time.

The re-population of Europe with carriers of R1a1 occurred in the period 2900-2500 years ago, that is, from the beginning to the middle the first millennium BC, and later. This is how the lifetimes of the common ancestors of the main European DNA-genealogical branches look like (Rozhansky and Klyosov, 2009), the times are indicated in years from the present time:

- European northwestern 2925 ± 370 years ago
- North Carpathian 2800 ± 350
- Western Eurasian 2750 ± 370
- Central European 2725 ± 300
- West Slavic 2575 ± 300
- South Eurasian 2550 ± 320
- West Carpathian 2150 ± 300
- Scandinavian 1900 ± 400
- Northern Eurasian 1575 ± 260

It was the speakers of the inflectional, Indo-European languages that returned to Europe. As you can see, for a number of regions it was the end of the last era and the beginning of our era. As a result of this resettlement, the Turkic European languages were replaced by Indo-European ones, and this tipped the scales in the direction of the present European languages. But this replacement left a large number of Türkisms in personal names, names of objects, individual terms.

It is unlikely that the displacement of Turkic languages by Indo-European in foreign Europe was quick and painless, or peaceful. Usually, with such substitutions, a whole number of factors act - in aggregate -, especially military, economic and political (ideological) ones. The military factor is not always necessary, or rather not decisive, but the last two factors are necessary. Apparently, the speakers of Indo-European languages arriving from the east convincingly (this is a broad concept) demonstrated to the Turkic-speaking population of Europe of the last millennium of the last era the advantages of their organization, the

advantages of a producing, or more progressive economy, level of education, culture. Only this could lead to the assimilation of a foreign (for the then Turkic population of Europe) material culture and the transition to another language. This area is still waiting for its researchers.

The fact that the branches of the genus R1a1 returned to Europe precisely from the Russian Plain is evidenced by the fact that all these combined European and Eurasian branches give the ancestor haplotype from the Russian Plain, and the same age, about 4900 years ago (Rozhansky and Klyosov, 2009).

The genus R1a1 with its Aryan language moved to the Russian Plain, presumably from the Balkans, at the beginning of the 3rd millennium BC. The vector of its migration was directed to the east, although the journey from the Carpathians to the southern Urals and to Central Asia for this genus took one and a half thousand years. It is clear that they were not nomads. It was a slow but steady settlement of the Russian Plain. This was the spread of the Aryan language from the Baltic to the Caucasus, and further to Transcaucasia, Anatolia and Mesopotamia. The Aryan, Proto-Indo-European language arrived in those lands, judging by the mutations in the haplotypes, about 3600 years ago. In this region, he remained, and if he advanced, then not to the east, but to the south, to the Arabian Peninsula. The share of R1a1-M17 in Russia, Iran, the Middle East and the Arabian Peninsula, according to (Abu-Amero et al, 2009; Underhill et al, 2009), is a significant percentage.

The Proto-Indo-European (R1a1) did not have any noticeable advances to the north or east from Western Asia. Transcaucasia, western Azerbaijan, or western Iran, and the whole of Southwest Asia were simply "dead-end regions" of the stay of the "Proto-Indo-Europeans" 3600-3000 years ago. The Aryans came there again from the territory of Iran in the first millennium BC, expanding the territories of their empires to the Caucasus and Assyria. But this was already the time of the most ancient Iranian languages with the transition to the Middle Iranian languages.

Recall that haplogroups R1a1 were found in the Andronov archaeological culture, and the haplotypes were typical modern haplotypes of ethnic Slavs (Klyosov, 2009e, and references therein; Klyosov, 2009b).

So, as inevitably follows from the above, the carriers of the haplogroup R1a1, they are also Aryans, they are also "Proto-Indo-Europeans" moved from Europe, most likely from the Balkans, to the east from the beginning of the 3rd millennium BC, populating the European plain (the age of the common ancestor of the Aryans on the Russian Plain is about 4750 years), and then, with the foundation of the Andronov culture 4000-3200 years ago, which superimposed on the habitat of the haplogroup R1b1 one and a half to two millennia before (Botay archaeological culture 5700-5100 years ago), with the subsequent settlement of the southern Urals and Trans-Urals, southern Siberia and Altai up to northern China.

Haplogroup R1b moved on a head-on course, but long before that - on the Russian Plain at least 8-5 thousand years ago, partially populating the Caucasus already 6 thousand years ago, and at the same time moving to Anatolia and further to the Middle East. That is, they practically did not intersect with the "Proto-Indo-Europeans", carriers of the haplogroup R1a1 in time, but crossed in the same territories, especially the Middle Volga, Samara, Khvalynsk, ancient pit, Srubnaya, Andronov cultures.

The main thesis about the Türkic-speaking of the R1b speakers is based on one single argument - that there is indeed a Türkic substratum in Europe, and that there are many Türkisms in the Indo-European language, which, according to a number of Türkologists, follows from the analysis of the texts of ancient authors.

Although at the same time it remains that some The pre-European substratum in Europe was both the Basque language and the Basque-like language throughout much of Europe. As noted by the historian and linguist Indarbi Byzov, in the era before Romanization and Celticization, the Iberian Peninsula was

inhabited by the Iberians - related to the Basque language. They also inhabited the British Isles, Ireland and western France. To the east of them, up to the Rhine, lived the Ligurs, who are also identified with the Sino-Caucasian group (I. Byzov, private communication). But this is again clearly haplogroup R1b, the culture of bell-shaped beakers, because it goes again from the Pyrenees to Europe, following the migration path of carriers of the haplogroup R1b1b2.

This chronology from Anatoly Klesov seems to be quite reliable. It seems that the subsequent appearance of some "emptiness" of the population in Siberia and near the Urals is explained by the outflow of the population to areas close to western Europe. Most likely cause of outflow: climate. But the higher culture of western Europe is also likely. And to this, very likely, - successes in the fight against the opposition of Western European peoples. If 4000 - 4500 years ago the West pressed the Proto-Slavs, then 3000 years ago the opposite process went. All peoples inhabiting eastern Europe took part in this process. Bulgars, Mordovians, Bashkirs, etc. Later, they created many states or autonomous regions in states in Europe.

It is very likely that Western historians, distorting the surviving memoirs and documents, later passed off their own feelings from the invasion of East Europeans as the feelings of the Slavs from the invasion of the alleged Mongol-Tatars. This is evidenced by the fact that no burials of numerous Mongol-Tatar leaders have been found, which is allegedly explained by the wisdom of the Mongol-Tatars. Say, no one should desecrate the grave of the leader. However, if you remember that the ancient Slavs burned the corpses of the dead, then everything falls into place. That is, these ancient Mongol-Tatars were Slavs. Unlike the late Tatar-Mongols.

There is one more hypothesis. Everything known for the period of total distortion of history was sorted according to the principle: the positive takes the west, the negative is left to the east. Therefore, all the horrors of the Mongol-Tatars ended up in the

east. It is possible that the act of throwing weak babies off a cliff, attributed to ancient Sparta, actually took place among the Slavs. They just lived in those places. It is possible that this was a cleansing, including from the dwarf breed. Which was in abundance after crossing with Siberian and Asian dwarfs. Confirmation is the breed of "Russian bear" and various epic heroes. This is not an invention, there are heroes in Russia and among the Slavs, just look at the champions in boxing, fights without rules, wrestling, barbell, etc. And in the outback there are heroes and stronger ones, but not everyone manages to enter the big arena, and the character is not suitable for modern civilization. Unfortunately, this cleansing was done to the detriment of mental faculties.

The methods possibly used by Western Europeans in their attack on the Slavs are well illustrated by a well-known historical example. When the leaders of all Prussian tribes were gathered in one place, ostensibly for negotiations, and then cut. This is one of the fragments of the era of shattered skulls. It is presented in encrypted form.

The moment of David's murder of Goliath, known from the Bible by crushing the skull with a stone thrown from a sling, deserves special attention. It is possible that the main reason for the era of shattered skulls is laid out here. When Western settlers from the shores of the Atlantic (mainly from Turkic-speaking settlers, about the same as the Albanian settlers in Serbia), led by clever Jewish advisers, commanders and inventors, armed themselves with slings unknown to the Slavs, they were well trained and rushed to the east. There they successfully defeated the Slavic troops, destroyed almost all the men, but left strong and beautiful Slavic women. That is, they did about the same thing that haplogroup R1 did with haplogroup I in the Fergana Valley. This is how the present Western European nation was born, in beauty and intelligence not inferior to the Slavs, but not with the R1a group, but with the R1b group. And curiously, it was the R1b group that turned out to be more tolerant of the presence of Jews

(simply smart ones). That was the reason for a much larger percentage of Jews in Western countries and, in terms of the aggregate of their influence, to be countries of a higher standard of living, technology, culture, and finally, football and tennis, than the Slavs. Which is what we observe.

The era of shattered skulls continues. Is your skull shattered yet? Then we fly on NATO planes to you.

And one more circumstance. Historians do not pay much attention to the interbreeding of a modern type of man with a dwarf type that settled long before him, which took place in the era of resettlement from Africa. What is the story of the chapter "On the role of pygmies and dwarfs in human evolution." But the overwhelming number of historical events and migrations is precisely connected with hybrids from dwarfs, with gabbers.

Figure 47. Table of haplogroups in European countries. Taken from the free internet.

Stage six. Europe 4.000 BC.

So, about 5000 years BC, haplogroup R1b attacked from North Africa, through Gibraltar and captured the coast of Spain, and then France. The R1b tribes dealt very decisively with all foreigners. Also, an indirect confirmation of the high aggressiveness and ruthlessness of the haplogroup R1b is the fact that in countries with a predominant haplogroup R1b, in the countries where they won, the percentage of R1b residents is extremely high. France 61%, England 67%, Spain 69%, Ireland 81%. While the percentages of the R1a group in the countries where they were the winners are noticeably lower. Poland-55%, Russia-47%, Ukraine-43%, Belarus-49%, Slovakia-42%, Lithuania-38%, Latvia-40%. That is, the tribes of the R1a group were noticeably softer with the defeated and left more living men. Perhaps at least male children were kept alive. Even the Great Russian group N is inferior in cruelty to the hot haplogroup R1b. Finland 58% N, Lithuania 45% N, Latvia 40%, Estonia 34%. True, to the mentioned percentages, one must also add the

percentages of haplogroups I1 and I2, and then the percentages of Aryan male winners will noticeably increase.

To feel the depth of the cruelty of ancient people, and not only the ancients, you need to watch stories from the wild world on YouTube. They shoot such scenes that people with weak nerves can not stand it. When wild dogs or hyenas snatch the insides of antelopes and bulls that are still alive and conscious. And they have no one to ask for help.

In the era of the broken skulls, the R1b group actively advanced and squeezed the R1a group out of Western Europe. Obviously, the main reason for the wars between R1a and R1b was language differences. In fact, the fraternal tribes R1a and R1b ceased to understand each other and became enemies.

Approximately 4000 BC, the general group N is divided (according to some designations) into N3, which moves northward, and N2, which moves southward and heads approximately towards present-day Moscow and further to the Baltic Sea. In its movement, the N3 group reaches what is now Finland, partly to Sweden. Haplogroup N2 populates territories from Chuvashia, Mordovia, Udmurtia, Mari El, to Moscow, Latvia, Lithuania, Estonia. It should be noted that both N2 and N3 in European territory were already significantly enriched in Slavic genes. And they have largely lost their narrow-eyed. However, they retained the Mongoloid genes of steadfastness and their own pathological greatness. Retained the genetic Mongoloid matrix. Haplogroup N3 broke off in Sweden and died down in what is now Finland. And haplogroup N2 continued its active expansion to the west and south.

The name of the CHUVASH people is related to the Turkish SAVASH - war. SUVARS is also the name of the Chuvashes. That is, from Siberia. This is the disintegrated Tartary. The Chuvash custom of tipshar - to hang himself at the gates of his enemy - is related to hara-kiri. Only here is a rather different moment. So that the village thinks that he hung you up and

pounced on him. The name VAYNAKHI (Chechens and Ingush) is a war.

Chronicle. 4500 BC People learn to use the plow. 4250 BC Development of copper and bronze metallurgy. 4242 BC The very first year according to the Egyptian calendar [1].

Situation in Europe 4.000 BC

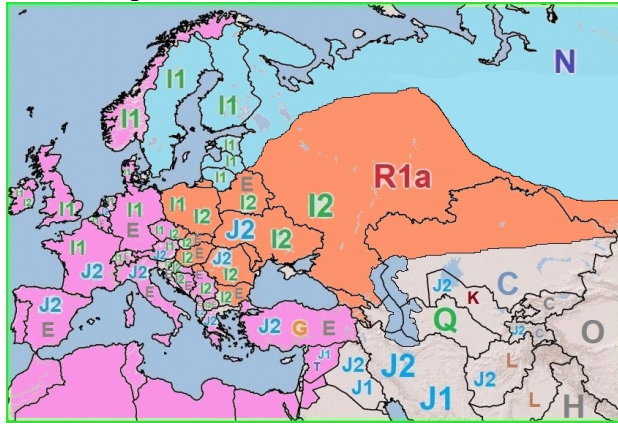

Figure 48.

Stage six. 4000 BC. Heading east.

Together with the squeezing out of the haplogroup R1a from Western Europe, the haplogroup R1a began to move from the regions of today's Ukraine to the east. What was it? Fleeing the R1b tribes due to military clashes? Or is the legend right that it was the movement of the Aryans towards the Sun? According to this legend, the Slavs wanted to reach the sun itself. Or (© Dubinyansky), as they called then, to reach the Celestial Empire. This name was later assigned to China. However, the remaining R1a tribes managed to stop the eastward expansion of R1b. It is very likely that they were helped in this by the N tribes, which already at that time had hybrid peoples with the R1a tribes and made up a noticeable part in the Baltic countries and in Northern Russia. It is also possible that the eternal assistant of the Russians helped: Moroz. He stopped both Napoleon and Hitler and more ancient conquerors. A mixed population of R1a and R1b (Sweden,

Germany, Serbia, Croatia) remained in the contact zone. Of course, all ancient haplogroups I, J took part in all these events in small numbers.

In their movement to the east, the R1a tribes defeated many Mongoloid tribes. As usual in war, men (who did not hide) were killed. The women were raped. This gave rise to the Central Asian peoples of the haplogroup R1a: Kyrgyz, Uzbeks, Tajiks, Afghans, Kazakhs. By the way, it is possible that in this movement of the Slavs to the east, haplogroup P disappeared. It was "assimilated". The Kazakhs later branched off from the Kirghiz, settling large vacant territories after the Aryan Cossacks left to the west, in the territory of present-day Ukraine, Don and Kuban. But the territorial name Cossacks remained and became a popular name, Kazakhs. Who have a close language with the Kyrgyz.

In the process of the movement of haplogroup R1a to the east, the Mongoloid tribes O, N were strongly pushed back. China was squeezed out to the borders of the current Great Wall of China. Which the Slavs R1a later forced to build the Chinese as a border. But later, China began to push back. Today this wall is far inside China. And the expansion of China does not stop. The Yakut tribes N were squeezed out to the Arctic Ocean itself. R1a reached Kamchatka and Sakhalin. Up to the Japanese islands (the Slavic settlers of the Ainu remained there). But they never reached the Sun. And further, the disappointed R1a turned south and moved to India and Persia. Because in the course of the wars, they received information that it is warmer in the south.

India is a country of ancient Slavs. See their religion and traditions. If you want to know the ancient Slavs. Hinduism is the ancient religion of the Slavs.

Chronicle. 4000 BC The wheel is invented and is being used. Rice growing is developed in China [1].

Stage seven. 3000 BC.

The Slavs conquer Hindustan and settle.

During this time, many technological discoveries are taking place.

3400 BC Initial forms of writing [1].

3200 BC Boats use sails on the Nile River.

3000 BC Bricks are widely used and made by firing. The first city-states were created, palaces were built. Temples are usually built in the city center. There were major military campaigns of ethnic groups of people.

The difficulty in describing the era from 3000 BC is that real events and events invented by historians begin to mix here. Plus, religious scriptures are superimposed on this.

Stage eight. 2000 BC.

Approximately 2000 years BC, the alignment of haplogroups that exists today was established.

Chronicle. 2667 BC The very first pyramids were built in Egypt.

2400 BC Construction of Stonehenge begins in England.

1250 BC Moses begins to lead the Israelites out of Egypt.

483 BC Buddha dies in India.

214 BC Construction of the Great Wall of China begins [1].

Situation 2.000 BC. Russia. In the European part, Great Russians, or simply Russians, are beginning to settle, but not Slavs, but Finno-Ugric. Outwardly, they almost do not differ from the Slavs, only a small percentage of narrow-eyed, but they have a significantly different genetics and mentality. Later, the Great Russian state of Muscovy will be created.

Figure 49.

Europe today and practically it was 2000 BC, picture from Eduard Chernov (<https://www.lab-prototip.ru/images/beginning/2019/JUL/2019-07-16-r1b-protiv-r1a/1.jpg>):

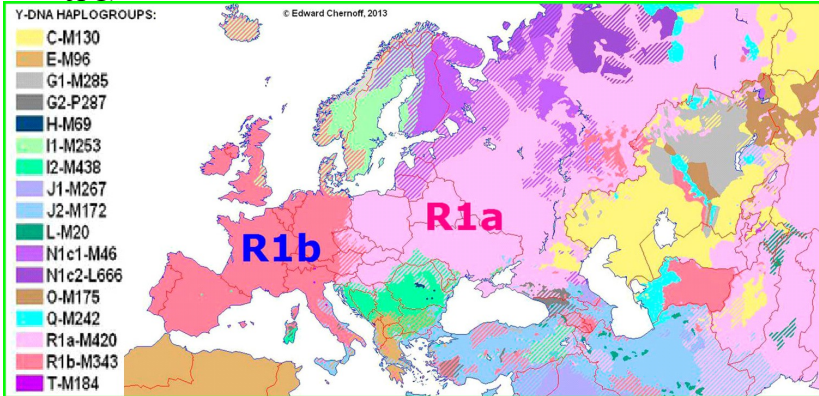

Figure 49.

This is a map of the predominant settlement of a particular group. In fact, many haplogroups have historically lived together in a mixed state.

Further, the events that are noted in the official history begin.

Major events in Russia.

The mysticism of the Russian flag.

Fatal events sometimes happen in the social life of countries and peoples. Such an event happened in Russia as well. The Russian tricolor - a flag made of three stripes: white, blue and red - was

first raised when the first Russian ship "Eagle" was launched in 1668 during the reign of Alexei Mikhailovich Romanov.

Further, many events take place around the flag. At one time the flag turns completely red. But in 1992, Russia returned under the tricolor flag again.

Small historical and geographical retreat. Here is a map of North America.

Figure 50.

Aside from the illogically inherited Alaska of the United States, the division of America according to the North-South climatic principle is quite obvious. North is for Canada, south for the United States. Why is it not one state? The difference in climate contributes to the division of peoples. And this division should be parallel. Otherwise, if there is a large vertical difference, then centers appear (like Moscow) that suck money out of the rest of the country.

If you look closely at Russia, such a division is also gradually taking place. Remember the huge USSR? The southern countries are leaving, breaking away: these are all Asian republics. Caucasus (Armenia, Georgia). Chechnya almost separated. The Balts retreated along ethnic lines. Belarus remained to live under socialism. It is strained, but Ukraine is also coming off. Because there are national reasons. She herself is torn to pieces. But among the reasons is the impact of climate. The northern climate creates its own, special, Nordic, tough mentality. Which is not pleasant and unacceptable to the southern peoples. The length of Russia

from south to north is too great for the peaceful coexistence of various regions and inhabiting peoples. And this is a time bomb.

But this is just a preface.

What is the meaning of the Russian flag? Allegedly, the meaning of such colors is that red meant statehood, blue - the color of the Mother of God, under whose patronage Russia was, white - the color of freedom and independence. There is another "sovereign" interpretation of the meanings of the colors of the flag, which means the unity of three fraternal East Slavic peoples: white - the color of White Russia (Belarus), blue - Little Russia (Ukraine), red - Great Russia. In fact, initially there was no point. And the ancient kings did not have any wisdom. I liked the colors (as in the store), and bought it. Guardsmen to the Tsar: choose which flag to wear. Tsar: I like this one, motley, striped. You think over there, what is the point to put in each strip.

Currently, the following interpretation of the meanings of the colors of the flag of Russia is most often (unofficially) used: white means peace, purity, perfection; blue is the color of faith and fidelity, constancy; red symbolizes energy, strength, blood shed for the Fatherland.

What is special about such a flag? At first glance, it's just a symbol and nothing else. Three colors, white - blue - red.

But in the 21st century mysticism is happening. Research on haplogroups begins. And this is how scientists draw the settlement of haplogroups. Exactly so, without any photoshop, without a second thought and without repainting the colors.

At the very top, of course, is the white Northern Ocean.

Below is the resettlement of one of the main haplogroups of Russia, the northern haplogroup N, "Great Russian". This is approximately 20% of the population of Russia.

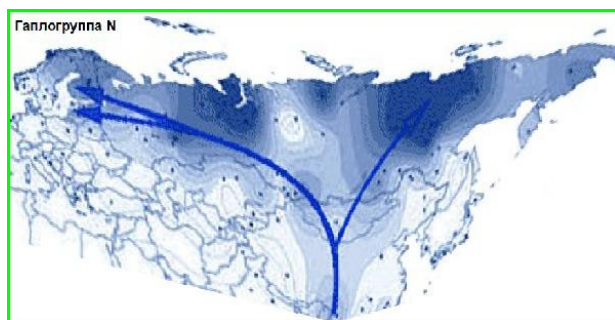

Figure 51.

And at the very bottom is the settlement of the most common haplogroup in Russia, R1a, or "Aryan", which makes up about 45% of the total population.

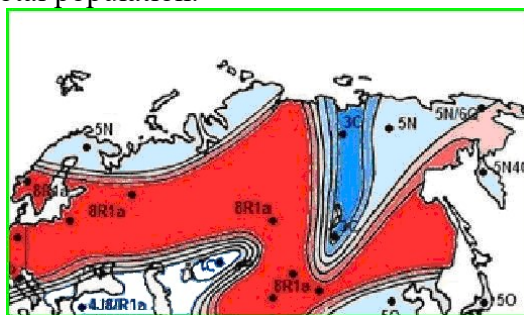

Figure 52.

All pictures are taken from the Internet, no photoshop. If you add these two pictures, then it is not difficult to find out the next picture, already a little with the participation of Photoshop:

Figure 53.

This is exactly what the distribution of the main haplogroups and the flag of Russia turns out to be.

It should be remembered that haplogroups N and R1a are very different in mentality. Haplogroup N is close to Chinese, Mongoloid, collective. And communism was brought to Russia not so much by Marx, but as by the tendency of haplogroup N to collectivism. Haplogroup N is actually the Tatar-Mongols, or, as they are called in Europe, the Finno-Ugric. The Romanovs were close to the Slavs, the Aryans, they were drawn to Europe, related to Europe. But in 1917 the Finno-Ugric won the civil war. Disguised as Bolsheviki. And this became a terrible disaster for Slavic Russia, from which it cannot recover to this day. Russia cannot calm down. The Finno-Ugric diaspora presents more and more new tricks. That is the revolution of 1917, then collectivization, then the shooting from the tanks of Parliament in October 1993. That is Putin's paradise and reset.

Haplogroup R1a is more democratic, selfish and tends to Europe. Representatives of the R1a group, after 1917, won twice: Khrushchev and then Gorbachev. But they could not keep the aggressive Huns. Today the Huns rule again.

Now we know what forces are tearing Russia and neighboring countries apart. And no matter how much we oppose, no matter how many parties we create, “YEDRO”, you cannot trample against genetics and climate. The main thing is to disperse peacefully and beautifully, with a minimum of casualties. Otherwise, again, wars and millions of victims.

The settlement of the Mongoloids took place mainly from east to west. On the contrary, the Slavs settled mainly from Greece to the east. Adding to those ancient (possibly Old Believers) who had lived on the Russian Plain for many millennia. At the same time, the Slavs settled in the south of Russia, and the Mongoloids in the north. It happened historically. And since these peoples from time to time fought among themselves, then somewhere along the parallel of present-day Moscow, up to Siberia itself, there were mixed peoples, that is, the Great Russians themselves.

Muscovites and various Chukhonts, Mordovians, Vepsians, Chud, Vod, Izhora, Udmurts, Nenets, Mari and other Chuvash and Tatars became such peoples. These are all Slavic-Mongoloid mixtures, in various concentrations and in various original specimens. These Finno-Ugric peoples began to crystallize around Moscow. They adopted the ancient Slavic language, brought into it their original militarized, boorish obscene language. They appropriated the term for themselves: Russians. And they named their territory Russia. Without going into details, this word is related to the German word Reich. This is one of the arguments that create the resultant name Russia. The second argument is Kievan Rus. This is also the Polish Rukh. The third is the state of Austrasia, etc.

Figure 54.

So, at the junction of the Slavic and Mongoloid peoples, the Russian people formed (Figure 53). Mostly around Moscow.

Russia as a battlefield between the Slavs and the Mongoloids.

The essence of the problem is very simple. Russia is a country where two very different peoples met and mixed. From the north, Great Russians (= Finno-Ugric), haplogroup N, and from the south, Slavs, haplogroup R1a. And so, on the interference of these two streams, many wars and tragedies, both real and literary, were born. This is "Quiet Don", and A. Tolstoy's trilogy "Walking through the agony", and many other works. Well, the real fates of

real, strong people who have not found any logic in what is happening. Including the fate of 27 million Soviet people who died in the homeland. Why did they die? For a dream? Or for Putin to become a lifelong marauding despot today? With the surrounding nouveau riche billionaire ghouls?

The Slav Bandera, the Slav Vlasov, and the Slav Shukhevych fell into this meat grinder. Both the Slav Shushkevich and the Slav Kravchuk. And the Slav Gorbachev. They took the wrong side, or rushed for a long time in search. They mistook the Northern Great Russians for the Slavs = Russo-Yakuts. Which were both Lenin and Yeltsin and Putin. These are empty-headed, but not adequately aggressive and impudent politicians. And the Slavs mistakenly took them for their own. This was a monstrous and fatal historical error.

What do you want from the unfortunate hybrid Chukchi? He just followed orders in good faith. Carried a suitcase for the boss. He has no ambition. He did not punish any of his employees! For 20 years, not a single one! He shot only enemies and competitors. He was guided by a primitive principle: to preserve the territory at all costs, to spit on the tragedies of the peoples living on it. Save the territories, and plunder, plunder and plunder the peoples living on them.

The global panic was created by Putin's effective managers and, above all, Putin himself. They messed up with contracts, with pipelines. No matter how you grimace, no matter how hard you try, one day life will pose a task that will require intelligence and knowledge. And this caodla has nothing. Only greed, anger and hatred for a foreign people, for the Slavs. Unbridled greed and anger towards competitors. Putin's cemetery has about a hundred people ordered. The FSB cemetery numbers thousands. Thousands more simply died from Putin's insane actions.

There is a big military-strategic game for the Crimea. It is far from over. It is just beginning. The Americans and the Ukraine (that is, the Aryans) had their own plans for the Crimea. Finno-Finn Putin prevented them. Americans do not forgive this.

Remember what happened to Japan after Pearl Harbor?
Remember what happened to Gaddafi? Crimea is Russia's Pearl Harbor. Putin is the Russian Gaddafi.

Russians are descendants of Great Russians or simply Ugrians. A suitable term has not yet matured. And today some (even women) growl so that their souls sink into their heels. They are beasts. 1/6 of the land was raked up and everything is small. But they themselves do not reproduce, because internal mutual malice stifles all desire to reproduce. Because there are too many freaks.

Greed will destroy the fraer. Insane greed for foreign territories. Reluctance and inability to work. Stupidity. Mutual internal unbearable aggressiveness, which eventually spills out onto neighbors. Why do you need so much territory? But because we are stupid and we are scared. Imagine that Siberia is Chinese. It's scary. Imagine that the Crimea is Ukrainian. It's scary. Well, you need to be friends with them, you need to exchange, but there is nothing. You have to show yourself, but there is nothing. In addition to missiles and tanks, which were developed during the Soviet era. Mostly on samples stolen from the west.

The unity of Russia is incompatible with either capitalism or socialism. There are 30 million Russo-Yakuts in Russia. Haplogroup N. For them, the autochthonous social system (as for all Mongoloids) is communism (socialism). And 90 million Slavs, Aryans, for whom the autochthonous system is selfishness, capitalism. Haplogroup R1a. Lenin organized the Civil War, in which the Russian people were divided into "Reds" (based on the Finno-Ugric) and "Whites" (based on the Slavs). Unfortunately, in war, socialism usually wins, they are wilder, more friendly and collective. Therefore, the economically diverse Slavs were defeated and thrown into the Black Sea. And those who are not thrown off are subordinate to the Moskals. And to this day, the Great Russians are at the heart of the Russian government. Not Slavs. Dirty Slavs. Red Slavs. Slavs with spoiled genetics. Absolutely insane for the Slavs, Marx's theory fell on the fertile soil of the Russian Finno-Ugric peoples. And then she moved on

to the Chinese, where she found her autochthonous soil. The theory of "internationalism" also played a role, which allowed many small peoples to unite (first of all, Chechnya, plus the Finno-Ugric, as it has always been historically), and sit on the neck of the Slavs. The only way out for Russia is the division into north and south. On the Finno-Ugric and Slavs. With different social devices. The North is socialism. South is capitalism. Many politicians, both Platoshkin and Spitsyn, are Great Russians, give out the surname in -IN, YN. These are not Slavs. These are aggressive Great Russians and they are again pulling into socialism. All Slavic interest Llect was in slavery under socialism. And again he will fall into slavery if the people choose socialism and return to the USSR.

Each stick has two ends. Marx was right about one thing. But he turned out to be absolutely and maliciously wrong about something else. Marx's theory is applicable only to mono-national countries. Like China. In which the dominant nation coincides with the titular one. That is why China has risen. And in multinational countries where the "equality of all peoples" is proclaimed, inevitably some nations climb to the very top (like the Great Russians in Russia, Slavic-Chinese hybrids), and the rest sink to the level of wordless slaves. In Russia, alas, it was not the titular nation, not the Slavs, that climbed to the top.

The situation in Russia is complex. And without knowledge of haplogroups in the last century and before, it was generally not solvable. Only in the 21st century did the theory of haplogroups gain clarity and DNA developments. The following is found out.

- The North and Urals of Russia are occupied by the Great Russians (= Chukhonts = haplogroup N). There are 30 million of them and these are of varying degrees and varieties of hybrids of the Yakuts (Chinese) with the Slavs.

- The center, south and flanks of Russia are occupied by pure Slavs (haplogroup R1a). There are 90 million of them.

- These are people who are very different in ethnicity and psychotype. The classic Great Russian is Putin. He is practically indistinguishable from a Slav.
 - Another 20 million in a mixed state are other haplogroups.
 - The Ruriks were Great Russians. Ruled for 800 years.
 - During the Romanovs, the dominant nation was Slavs = Russians. 300 years old. But there was no clarity and unambiguity in society. In 1917 the Great Russians came to power (under the guise of "proletarians"). We know the lawlessness and otvyaznosti of this people for the atrocities in the civil, Stalin, and the NKVD. It was against the Great Russians (unconsciously) that the West organized Hitler's invasion. But with the help of detachments, Stalin managed to win.
 - Khrushchev wrested power from the Great Russians (also instinctively). Relying on the victorious Slavic generals. Khrushchev, Brezhnev, Gorbachev were Slavs. However, they were forced to maintain a system that was alien to the Slavs. And this led to a crisis. In 1990, the Great Russian Yeltsin again wrested power from the Slavs. And today for 30 years the Great Russians have been rampaging in the vastness of Russia. They sneer.
 - Which exit? - Division to the south - north. Moscow to the Slavs! Divide nuclear facilities proportionally.
- Muscovy of 30 million seized 1/6 of the earth's land, appropriated the Russian language, appropriated the name "Russians" and the name of the country Russia (changed Rus). And today it threatens the whole world.

The system of imitations in Russian society.

To characterize the Russian society, the authors offer the following pearls of their own production:

- Russia is a country of aggressive thoughtlessness.
- The Russians do badly well, but they do well badly. This author's aphorism is difficult to understand the first time. But that is why it is valuable.

So something similar is happening in science. So, right off the bat, in the 30s, maybe earlier or maybe later, a perfect Russian scientific system was invented. Its essence lies in the fact that the scientific level of a scientist, his place in the scientific hierarchy, they try to determine, at best, by his memory (academic performance at the institute), and most often and as a rule - by some personal qualities of contact, adaptability, sneakiness, ability to lie and steal other people's results. Well, how could it be otherwise? There are no objective and rigorous ways of assessing the significance and usefulness of scientific developments. Of course, there is public recognition, but this case is easy to manipulate, which is what the powerful of this world take advantage of. So, in the current Duma and Government, only a small part of the deputies and ministers are not purchased doctors of science, because they are lazy. Purchased "doctors", unfortunately, fit well into the general list of scientists doctors, because real doctors in the majority, according to the same principles of "patency", become doctors.

This system of "imitation" was adopted in the USSR in many intellectual spheres. They imitated composers, writers, artists, poets, scientists. There were unions of writers, artists, composers, there was an Academy of Sciences. But what is strange, for some reason, real, beloved among the people, read writers, respected artists, popular musicians could not become members of the corresponding union. And those crooks who somehow infiltrated there, having received a recommendation from the same, but already members of the union, by acquaintance, through connections, for some reason they could not create anything interesting in their field of activity. The same is true for science. The crooks received recommendations and positive reviews for their hacky dissertations and became the same hack doctors, candidates and academicians.

They imitated production leaders, miners. A lie, it does not disappear anywhere from society, even with a change of formations, it simply passes from one type to another. That Soviet

lie of "imitation" has passed into the current lie of fooling the poor part of the population. Starting from election promises and ending with the wildly advertised "increases" in pensions and social benefits by 3% with inflation of 15%.

Our society is so arranged that it is trailing at the tail of Western civilization. Therefore, the main part of the general lie is still located in the field of imitation. Activity, reforms, freedoms, entrepreneurship, etc. are imitated. But in fact, everything flows as it did, nothing changes, corruption, embezzlement, capital export, and tax evasion flourish.

The main genetic alignment before the new story.

So, here is a simplified map of the location of haplogroups in Europe before the beginning of New History.

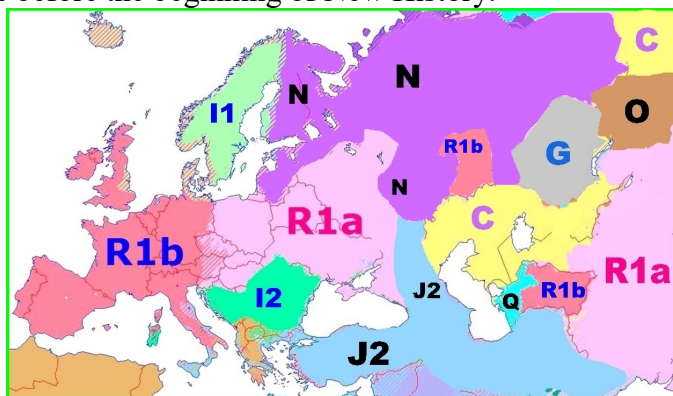

Figure 55.

The figure shows the areas of residence of the tribes with the designation of the predominant haplogroup. Of course, there is nothing pure in nature. The tribes liked to plunder each other from time to time. Then they loved to avenge the robbery. Military contacts were frequent. There have always been slaves, rapists. There were cross-links.

As can be seen from this figure, the area of residence of the Slavs R1a has historically been surrounded. More precisely, a part of the range. The main range of R1a went to India and left hybrid

offspring in Uzbekistan, Kyrgyzstan, Tajikistan, Afghanistan, and Kazakhstan. From the west, Germanic tribes were pressed. From the south, the Muslims pressed, then they were called the Khazars, today there are Chechens. From the north and east, the Great Russians, hybrid tribes resulting from the mixing of the Yakuts with the Slavs, pressed on. Historians of the 18th century called these tribes Tatar-Mongols. Clashes with the Romanians and Bulgarians took place from the southwest.

If we compare the number of R1a residents in India (with Asia) and in Europe together with Russia, we get the following picture.

In the European part: $\approx 190.000.000$

In the Asian part: $\approx 430.000.000$ Twice as much.

Why such difference? Mainly because of the last two world wars, as well as the civil war in Russia and repression in the territory of Russia and neighboring countries.

But what is interesting, after all the great migrations of peoples, we found ourselves head to head with our brothers R1b, who went on a different route. We faced them head-on, and for many centuries we have been fighting among ourselves and exterminating each other. To the delight of the Chinese genetic offshoot, the Finno-Ugric. On this occasion, they even declared the expulsion of the Slavs (Poles) from Muscovy a holiday. And the heroes are the Finno-Ugric Minin, who expelled the Pole brothers from Moscow, and the Finnish-Ugric Ivan Susanin, who led the Pole brothers into the swamp.

The history is written by the winners, and it is not always true. Some Turkic Mongoloids are strenuously pushed into us, who, with a whoop, jumped straight from China all the way to Rome itself. Some Mongols who made a yoke to the Slavs, but whose genetic traces were allegedly not found in Europe. Although 30% of the European part of Russia has a haplogroup N. But these are "our" Mongoloids. At the same time, in historical texts, the genetic affiliation of peoples and ethnic, linguistic ones are constantly mixed.

The theory of haplogroups puts everything in its place. Since ancient times, there has been a war between the tribes N and R1a. War between the north and south. War with varying degrees of success. The Huns came from the northeast, from the Urals. Mordva, Udmurts, Mari, Nenets, Veps, Chud, Vod, Izhorians and other tribes of group N, these were the Huns. The British named them Mordor, Mordva, Udmurtia. Not by chance. The word Mort = Death is already at the root of these names. Mari El is also there. Erzya (cut) is also there. These are clearly not self-named peoples. These names were generated by the process of creating these tribes: the extermination of men, aboriginal Slavs, and, classically, violence against Slavic women. These were very aggressive, arrogant, wild forest tribes, noticeably burdened by the northern climate and lagging behind in evolution. However, they overtook in malice, belligerence, collectivism and mutual assistance. Their writing, thinking and language remained at the level of hieroglyphs. Basically, these are hybrids between the Mongoloids N and the Slavs R1a, but with the Mongoloid genetic matrix in the brains.

The Slavs can speak among themselves softly and friendly. But try to have a friendly conversation with the Finno-Ugric. He won't talk to you at all and will declare you a fagot. Because this is the only way to maintain your supremacy in society, being more stupid than those around you. But at the same time, he portrays a smart one who understands who is a fagot and who is not a fagot. And keeping quiet when discussing in society (you will pass for smart). And again, our sample is Putin. He never participates in any communication. Because all his stupidity will immediately come out. Yes, she gets out from time to time. He prefers to remain silent, sit back, speaking only with speeches on a given topic, and with memorized answers to selected questions. At the same time, positioning himself above the participants in the disputes. Posing as something that allows him to consider himself above the rest. He kind of ignores everyone else. Nothing like that

just does not exist and does not happen. But the Slavs are led to this and swallow it.

Why are there fewer Aryans today than Erbins?

Our calculation for all countries of the world gives the following results.

R1b total number $\approx 830.000.000$ people.

R1a total number $\approx 620.000.000$ people.

Why are we, the Slavs, the Aryans R1a lagging behind the Erbins R1b?

The reason is simple. Today there are 140 million in Russia. According to scientists, if it were not for the 1917 revolution, which the Great Russian, Chuvash or Kalmyk Lenin (according to grandfather Ulyanin) arranged for us, if they lived peacefully, the population of Russia today would be about 350 million people. Here they are 210 million behind the Erbins. And this is not a fluctuation, it is not an accident. Today, this is a stable, irreversible process of destruction of the Slavs by the Finno-Ugric peoples, behind whom is China and other Mongoloid peoples.

It's time to end the victory The Germans were defeated? Well, who lives better today, we or the Germans? Come to your senses, Slavs. The Great Russians, the descendants of the Tatar-Mongols, were warmed up, and the brothers of the Slavs, Ukrainians, Belarusians and Balts were instead squeezed out of Russia. Was Russia really bad under the Germans, the Aryans Romanovs? But the Chuvash Lenin raised the Great Russian rabble and brought blood and chaos to the Slavic country. And since then, the Great Russians have been in power for more than 100 years: Lenin, Stalin, Bulganin, Kalinin, Kosygin, Yeltsin, Putin, Sobyenin, Mishustin, Volodin, Nabiulina, Baturin, ... 10 million in the civilian, 27 million in the domestic, 10 million repressed, 30 million were not born during the Yeltsin-Putin years. May be enough?

The social consequences of the October Revolution are catastrophic. All this is the result of the Great Russian

government. Is it possible to stop this process of extermination of the Slavs? Can. But only in one way: by separating from all Ugro-Finns by the border. Otherwise, the Slavs will be destroyed.

Movements of Russian haplogroups.

All Russian history is the interference of two main haplogroups, N (Yakut = Chinese) and R1a (Slavic). Plus, in some places there is sometimes a small participation of other haplogroups, I2, J, R1b, C and some others. Haplogroup I2 is mainly mixed with haplogroup R1a on the territory of Ukraine and western Russia. Most likely these are the areas adjacent to Belarus. But the main events are associated with the interference of haplogroups, N and R1a. That is, between the Mongoloids and the Slavs (Europeans).

War in those days was reduced to the killing or capturing of men. The prisoners were made slaves or even eaten. And the women of the defeated tribe were divided among themselves by the winners. What they took as wives, in harems, what they left to fend for themselves. There is a higher meaning in ancient wars: the male population is exterminated in them, but women are fertilized and a new people is born. Just like the change of the leader in the lion's pride takes place. He destroys all the cubs of the previous leader, but takes all the females for himself. After each such battle and victory, a new tribe of half-blood hybrids was born. Between the race of Europeans and the race of Mongoloids. These are very distant races, they diverge evolutionarily for 40 thousand years. And from such mixtures in the first generation, very strong hybrids arise. Only in the first! Who grew up and went to fight with other tribes, both European and Mongoloid, and mixed. And thus, by the era of about 3000 years ago, numerous peoples-hybrids of Mongoloids with Europeans, different percentages of mixing, different times of mixing, different sets of genes, various small admixtures of other distant haplogroups, and different spoken languages were created on the territory of Siberia and the Urals. There was no written language yet, so numerous fateful wars and genocides will remain out of history. Although,

undoubtedly, in a hundred years, when the haplogroups of all people become known, computer technology will restore all prehistoric wars and movements of peoples.

There is a concept: evolution. Associated with the concept of evolution is the concept: complication. If you do not list all the haplogroups, but only those mentioned here, then the complication of the haplogroups looks like this: G - N - R. According to the chronology of occurrence. The simplest people mentioned are G. These include, for example, Stalin. Simply put, primitive bandits. Further, haplogroup N pre-evolved to hieroglyphs. And the most difficult groups are R1a and R1b. They were the last to emerge. Here humanity has pre-evolved to signs, letters, texts, science, poetry, literature, music. There is a constant struggle between the new and the old in the world.

Regarding the Slavic group that ended up in India. They did not want to exterminate the ancient Indian haplogroups (H1) or failed. And I had to live in a state mixed with them. Naturally, there was no development. As well as the life of haplogroup R1b in South America along with the Q Indians. Also constant chaos, revolutions, technological backwardness, no progress. The Slavs also had to live in a mixed state and with haplogroup N, and even from time to time to give up the royal crown.

By 1917, Russia came up with the king of the haplogroup R1b and great prospects for world leadership. Alas, alas. In 1917, the Great Russians (N) revolted under the leadership of Lenin (Ulyanin, also N). And plunged the country into chaos. Then the Great Russians were led by the even more evolutionarily backward Stalin (G) and the chaos continued. The West wanted to fight this, found Hitler (E), organized a war. But it was not possible to defeat Stalin. Stalin simply filled up the West with millions of corpses. Detachments, executions, cruelty, discipline. Promotion of the ideas of socialism. After Stalin's death, the initiative was seized by the Slavs: Khrushchev, Brezhnev, Gorbachev. They are actually Ukrainians, Slavs. They managed to mitigate social aggressiveness. Reconcile all citizens. And even

try to build socialism with a human face. Alas, this was prevented again by the Great Russians N. By the way, they are idolaters. They love to build monuments, monuments, memorials, Yeltsin centers and mausoleums to Lenin. Tsereteli blossomed with them. Great Russians Yeltsin, and then Putin again recreated thieves' chaos, bandit lawlessness. We raised the level of aggressiveness in the country to the pre-war level again.

Stalin is the leader of the lowest, uncultured level. Animal level. However, like Putin. For the Slavs and Europeans (R1a and R1b) Stalin is the enemy. But on the other hand, for backward haplogroups up to J, N, O, P, Stalin is the most beloved and understandable person. The Second World War is a clash between the most ancient groups of Hitler (E) and Stalin (G). And this is symbolic.

The Slavs were twisted into a ram's horn and lowered in 1917-1922. Under the leadership of the Finno-Ugric Lenin. During the Civil War, 10 million of the Slavic elite were destroyed or thrown abroad. We should not make the mistake of considering the winners and the losers the same in that civil war. The country was headed by foreigners, mainly Great Russians (= Finno-Ugric) and Caucasians. And for 100 years, the Slavs have not been able to escape from the embrace of alien genetics. This is another show There is turbulence, randomness and unpredictability of political events, the absence of any logic in them. The butterfly effect of influence on the future is clearly manifested. Oh, if Fanny Kaplan hadn't missed ...

The next point is very difficult. Because more than two members are intertwined. In the center of the Slavs, Kiev. Khazars (Muslims) from the south. Tatars from the East, Golden Horde. About the Tatars in Western Europe. Collapsed Tartary, where did she run away? By tradition, to the west. Let's remember Margaret Thatcher (Tatars in the last name) and Tartarin from Tarascon (Tatars in the name and the city also with a Tatar). Where did the names Tottenham, Tutaev come from? Tajiks = Tatar Dagi.

And plus to this, when describing Khazaria, jumps are often observed. Some authors present Khazaria as a Muslim state. And other authors for some reason ascribe Judaism to the Khazars. And Judaism is more inherent in Germany. Most Jews lived in Germany and Poland. Historians write that the Golden Horde replaced Khazaria. But in fact, these are just different events in different geographic locations. And there is an opinion that the Golden Horde is Muscovy. Or somewhere nearby.

The well-known, notorious ORDA, in reality, arose northeast of Moscow and actually came from the north. Although later historians turned everything upside down. In the formation of the horde, according to many indications, the Germans took part. How it went, and where the Germans went later, historians will have to find out. In particular, the city of Nienschanz is of Swedish-German origin. Which was later conquered by the Slavic Tsar Peter 1 and renamed Petersburg. And historians later lied that Peter 1 built this city in the Baltic forests and swamps, on the bones of thousands of Russian people. If there were bones, then the bones of the soldiers of Peter 1. Several dozen.

This is confirmed in linguistics as well. The words ORDA and the German word ORDNUNG (order). And also in the names of the regions UDMURTIA, MORDOVIA. And also in the English word MORT (death). Yes, however, and in the Russian word DEATH. The Horde brought death to the Slavs. And Hitler and Napoleon only tried to destroy the horde.

Germany overthrew Yanukovich's pro-Moscow government and liberated Ukraine. Germany does not need a hostile Ukraine. Germany today holds Russia today as a raw material appendage. That is, in fact, Tartary was preserved, only its top moved to Germany and further to the West.

A large percentage of Chechen genetics J in Mordva and Udmurtia, as well as in Tatarstan, testifies to close military cooperation between Khazaria (Chechnya) and the Horde. This is an eternal cooperation in the enslavement and plunder of the Slavs. He came to the surface immediately after Yeltsin came to

power. Let us recall the Chechen advice notes, in which Russia was robbed of billions, which later turned into the Chechen war. Where did they come from? They came from internal connections among the people, coming from antiquity. Which is not at all as ancient as official historians believe. And everything happened literally in the 17th century.

Perhaps no Ruriks existed. They were invented by German historians to blame many of the troubles and echoes of ancient wars on them. On the Ruriks, the Tatar-Mongols and on the Khazars. But in our story it is accepted that Ruriks existed.

Since the 15th century, a double-headed eagle with a single crown over two heads has become the symbol of the emperor of the Holy Roman Empire. Later, in the 19th century, the double-headed eagle became a symbol of power (coat of arms) of Austria-Hungary, and during the time of the all-German parliament (1848) (German Paulskirchenparlament) - the coat of arms of the German Reich.

Figure 56.

From this figure, we see that Ukraine since ancient times gravitates towards the Khazar trident, and Russia uses the German two-headed eagle. That is, the Golden Horde = Germany again.

Historically Kiev belongs to Poland. But its foundation is invented by sentimental historians. The real emergence of Kiev is shown in the following figure below.

A powerful tribe of Polyans with an ancient capital never existed in the city of Kiev. It did not exist because the steppes and forest-steppes north of the Black Sea in the 7th-10th centuries were completely controlled by the Khazar Kaganate. The lands of the glades and northerners were directly part of the kaganate. And the Khazars collected tribute from the Radimichi and Vyatichi. As for Kiev, it arose not as the capital of the mythical "state of the glades - Rus", but as a Khazar border fortress in the north-west of the Kaganate's possessions. And its original name was Kuyawa. It bears the name not of the Polyan prince Kiya, who never existed, but the vazir of the Khazar troops of the Khorezmian Kuyi, who founded this fortress in the second half of the 9th century. The fact that the original name of Kiev was Kuyava is evidenced by the forms of this name among foreign authors of the X-XI centuries. Constantine Porphyrogenitus (Greece, X century) - Kioaba. Al-Istakhri (Arab, X century) - Kuyaba. Titmar of Merseburg (German, XI century) - Cuiewa.

Figure 57

Kiev was founded by the Khazars and at that time received the Khazar trident on the coat of arms. This version of the founding of Kiev is confirmed by the studies of the authors of the population density of the regions of Russia by the Chechen haplogroup J.

Below is the same area today:

Figure 58.

In the 13th century, a disaster struck the Slavs. From the north, tribes under the common name Tatars (= Finno-Ugric) attacked the Slavs. These were the remnants of ancient Tartary, haplogroup N. Not even remnants, it was just the movement of Tartary. From the south, Muslims, Khazars, mainly Chechens and related tribes, haplogroup J. They were spiteful, wild, aggressive people, Asians. And once they closed in the area of today's Tatar-Mordovians, along the line of Mordovians-Chuvashia-Tatarstan-Bashkiria. In the figure, in the lower part, a thick border is drawn in green along the capitals of the listed regions Ufa - Kazan - Cheboksary - Saransk, and then through Voronezh - Kursk - Kiev. Below is a table with the population density of various haplogroups. Group J is highlighted in red.

Азиатские гаплогруппы в российских республиках.

Гаплогруппа Республика	R1a	R1b	N	J	I	G	E	C	Q	L
РОССИЯ	47	6	25	5	15	4	5		1,5	
Татарстан	20,7	1,9	28,3	15,1	13,2	7,6	5,7	5,7		
Чувашия	27,9	2,3	27,9	16	11,7		14			
Мордвия	42,4	10,2	10,2	15,3	5,1	3,4	10,2	1,7		
Башкирия	32,1	44,5	16,3	2,9	0,5	1,4	0,7	0,5		
Чечня	1,6	2,5		70		4,1			8,2	12,4
Дагестан	3	5		70		5	2			
Ингушетия	1,5	2,5		80		4			8	12
Осетия	6,7	7,0		20		46,7	13,3		6,0	
Удмуртия	10	2,3	82		1,1					
Марий Эл	47,7	2,7	50		8,1					

Figure 59.

Haplogroup J is present practically only in four regions (except for the Caucasus): Tatarstan, Chuvashia, Mordva and Bashkiria. Together with the Caucasus, they give 5% of haplogroup J in Russia. Unlike haplogroup J, haplogroup N is more mixed with the Slavs. And visually they can be distinguished only by their surnames ending in -IN. This is a characteristic mark for the descendants of the conquerors, the Tatar-Mongols. Once she was a source of pride, today it is the other way around. Apparently such names were received by the conquerors.

These areas, plus Khazaria, united against the Slavs, and arranged a Tatar-Mongol invasion for them. But there are no genetic traces of the Mongols proper in Russia. And as many genetic traces of the Finno-Finns and Chechens as you want. Wild tribes of the Tatar-Chechens flooded into Russia, destroyed all the cities and exterminated 30% of the Slavic population. And lowered its level below the plinth.

The Chechen Muslim Khazaria, in collusion with the Finno-Ugric Muscovy, tore apart the Slavic principalities and Kievan Rus vertically from Chechnya to Yamal and established boundaries between themselves along the line (in today's terms) Bashkiria-Tataria-Chuvashia-Mordva-Voronezh-Kiev. Earlier it

was mentioned that the word Voronezh probably comes from the words Voro Ingo = Igo of Thieves. This line belonged to Khazaria. Therefore, the Khazars made border Muslim settlements in the aforementioned areas and converted the occupied areas to Islam. This is evidenced by the Chechen haplogroup J, preserved in Mordovia-Chuvashia-Tataria. It is 16% in all three districts. In Bashkiria and Voronezh, the percentage of Chechens is lower, since Chechen settlements were subsequently assimilated or destroyed. But the Chechens themselves are found. And the Slavs are historically afraid of them.

Of course, for the resettlement of Chechen soldiers there, houses and villages were “liberated” from the Slavs. Islam was forcibly imposed by blood and whips and traditional Slavic Christianity was destroyed. Since then, in Mordva, Chuvashia and Tataria, the percentage of the Muslim Asian haplogroup J is 16%. The rest of the population by haplogroups is approximately the same as that of all Slavs. In Bashkiria, J is less, only 2.5%, because there was a strong Aryan haplogroup R1b, which significantly pressed and assimilated the Chechens. But she could not resist Islam. In Voronezh, the Chechens were almost completely assimilated and squeezed out by the Russian Slavs. I remember in my childhood I was surprised (60s, Lipetsk region), where did we get in our Russian village the vicious, hunch-nosed, screaming bow-legged Chechens and completely stupid Chechens, whom everyone was afraid of? Chechen women are very unpleasant, loud, aggressive, petty, they hate Slavs. However, like all the peoples of Russia. The Chechens stole Russian people into slavery and kept them in cellars. Used as domestic helpers. Or maybe they were forced to give birth. That is why the Slavs pay for slavery under the Finno-Ugric and Khazars. This is a very cruel historical and genetic trap.

The Finno-Ugric border military settlements belonging to Muscovy were named Udmurtia and Mari El. By the way, this confirms that all historical events took place very recently, within 500 years. Noteworthy is the root of the MR in the words Udmurtia, Mari El and Mordva. I wonder what this means?

Thus, we formulated how all historical events, invasions, wars, expansions and annexations took place. The elites solve their problems with the hands and lives of the uneducated and deceived population. And so it was and will be forever and ever. It is written in the Bible: do not create an idol for yourself, be it Putin or Stalin. All idols are two-faced, multifaceted, deceitful and cynical. Nothing human is alien to them. They also love to scoff at the deceived and defeated.

Tartary.

In the interval from the beginning of our era to 1000 AD, the formation of Tartary existed on the territory of Siberia, consisting of hybrid, mainly Yakuto-Slavic tribes. The very name Tar Tar © probably meant Kings of Kings. Although it is possible that the meaning of this term Tartary is only that it is a Territory. Similar to the fact that in ancient times there was the term Africa. That is, it was not one state, but only a territory in which many peoples lived. But it is also possible, on the contrary, that the word territory comes from the state of Tartary. Subsequently, this state of Tartary collapsed into small parts, and went to Europe, to Finland, the Baltic States, Pomorie, to Muscovy, and the remnants today appear as republics: Tatarstan, Chuvashia, Mordva, Mari El, Bashkiria, the Yamalo-Nenets district, and others. And this movement to the Karelian Peninsula, in the Urals and the Volga region, it was not khukhry-mukhry, but a bloody battle of tribes for territory. The Finno-Ugric fought against the Slavs. And the advancing Finno-Ugrians achieved a lot.

Americans, British, Germans, French are our brothers, we are brothers, R1a and R1b. We are Europeans, we are Aryans. We are separated by only 5-10 thousand years of evolution. This is much less than the distance to the Chukhont Huns N, separated from us by 40,000 years of evolution, who have always plundered and lowered us. With whom we have only a common territory, but millions of freaks across the country from the collapse of the Finno-Ugric genetics. Who, with their Jesuit policy, quarreled us

with brothers-Slavs, Ukrainians, Belarusians and Poles. They write to us in the inversion of history that the hero Minin liberated Moscow from the bad Poles, but in fact the alien Finno-Finn Minin drove out our fellow Slavs, the Poles. And the hero Susanin led the Poles into the swamp, saving the Finno-Ugric king. The Finno-Ugric imagines themselves as "Great Russians", the highest race in relation to the Slavs. And today they mercilessly robbed the Slavic old people for 5 years of retirement and continue to rob. Today we are personally convinced that the Slavs and the Finno-Ugric are not brothers or even friends. But it is not for nothing that the proverb says that we are fools where we are not aware. Most of the Slavs do not know and do not understand what is happening, and they hung on their ears a lot of pseudo-historical noodles.

The ancestors of the Turks were nomads, people from Altai. Their self-name "Turk" meant "strong", "strong". In Altai, they multiplied and in the 6th century set off in search of a better life. They settled in Siberia, the Volga region, Central Asia, the Caucasus and by the XI century they reached the borders of the Byzantine Empire, which they began to gradually eat. By this time, pieces of the weakened Byzantium were bitten off by many peoples, including the Slavs ...

However, no matter how many terms we come up with, the genetic basis of Tartary is based on two genetics: Slavic and Yakut, with minor impurities. All erbins (R1b) left the territory of Russia much earlier than the formation of Tartaria.

Two Tartaria: North and South.

Oh dear sir, kind sir,
because she won't be mine anymore,
the rich chose, yes the Tatar,
and not to see joyful days ...

It cannot be said that Tartary existed firmly and for a long time, becoming a large, united and serious civilization. Perhaps, from

the point of view of Western historians, it was just a kind of TERRITORY. From the point of view of DNA genealogy, Tartary was North and South. Here are some very important differences.

At the heart of Southern Tartary were the Slavs and their military campaigns. At the heart of Northern Tartary were Mongoloids, Yakuts, Chinese. Most likely, in the wars between Northern and Southern Tartaria, there was a mixing of genetics with subsequent selection in accordance with the matrix of the main tribe. In the south, tribes with a Slavic matrix had an advantage, which is noticeable in the mentality of today's Uzbeks, Kyrgyz, Tajiks, Kazakhs, and partially Tatars. They are drawn to the Slavs. And in the north, the tribes with the Yakut matrix had an advantage, which is evident from the mentality of the Udmurts, Chuvashes, Mordovians, Mari, Nenets, partially Tatars, Finns, Karelians, many small Finno-Ugric peoples, and the Muscovites themselves. They are drawn to China and China understands this. This is why, globally, Manchuria has become Chinese, and the Great Wall of China, which used to be the border, is now far inside China. There is a return movement of China.

Accordingly, the invasions of the Tatar-Mongols were different. There were southern Tatar-Mongols, basically the same Slavs. It was always possible to come to an agreement with these, and the Slavic leaders did. And there were also northern Tatar-Mongols, from Ruriks to Bolsheviks, who despised, hated, and killed the Slavs. It was a mentality alien to the Slavs. She despises everything reasonable and hates the Slavs for their kindness, intelligence and softness. The northern Tatar-Mongols recognized only the slavish position of the Slavs. This is what we can clearly see today in the actions of the Russian authorities.

What does the difference between haplogroups mean?

The Russian people are made up of many haplogroups. But the main haplogroups of the Russian people are the following: R1a - 47%, N - 20%, I2a - 11%. The rest of the haplogroups are present

in quantities at the noise level. Consider the distribution of these three main Russian haplogroups in chronological order.

What does commonness or difference of haplogroups among peoples mean? Means a lot. By itself, a haplogroup does not mean anything. But the stream of settlement of peoples plays a role, in which this haplogroup began to multiply and settle. And the flows of settlement arose in different places of the globe and in different eras. Therefore, people from different streams of settlement are very different. To the extent that some of their hybrids do not produce offspring. These are some differences in psychology, in outlook on the world, on society. These are the aspirations of peoples for rapprochement or antagonism between peoples.

The oldest Russian haplogroup: I2a - 11%.

The history of Russia began with the peaceful settlement of the territory by ancient tribes. From the west, predominantly haplogroup I2. Perhaps earlier I2 came from Fergana, where they, together with R1a and R1b and I1, formed the European type of person. In a few thousand years, these tribes will dissolve among new aggressive invasions and will not play a decisive role in the bloody events of the last two millennia.

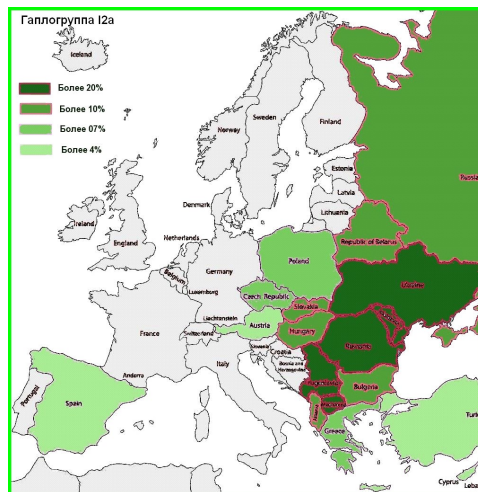

Figure 60.

What do we see? We see in this haplogroup the kinship of the Russian people with Belarus, Ukraine, Moldova, Romania, Bulgaria, Serbia, Bulgaria, Macedonia, Albania, Hungary, Slovakia. In fact, this is our relationship with Europe. This is just an ancient people who settled peacefully on the East European Plain about 5-10 thousand years ago (give or take). The appearance of this haplogroup among the Russian nobility has not been studied.

The next most ancient haplogroup: N - 20%.

The second most important in the history of Russia was haplogroup N. It arose in Siberia, went first to the north, and then split into two branches. One branch (main) went to the north-west, to the Ural Mountains, and the second branch, weaker, went to the north-east. The purely Mongoloid peoples, the Chukchi, Evenki, Yakuts and others, went to the east.

The northwestern branch of the settlement of haplogroup N reached the Kara and Barents seas and populated the shores of these seas.

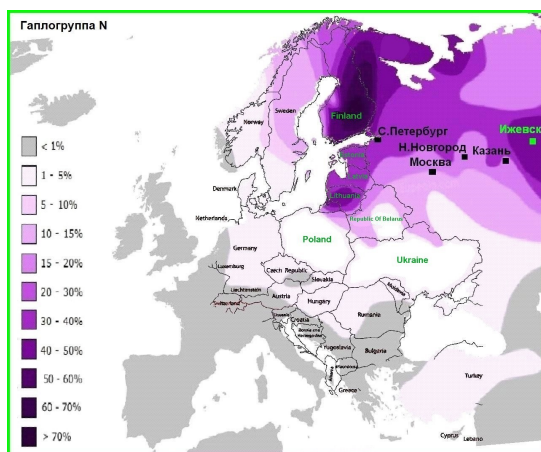

Figure 61.

How this settlement took place is not known to history. Of course, there were wars, someone was exterminated. It is important that the resettlement of the N group took place in the

north of Russia, in harsh climatic conditions. The largest concentration of haplogroup N today is in Finland, 59% of the male population. The concentration is also high in the Baltic countries. In Russia, the total number of haplogroup N reaches 21%, but since N is located in places of the main concentration (north, from Moscow to the Barents Sea and the Volga region), in these areas the concentration of N reaches 50% of the population. This part of the Russian territory will be called Muscovy. Its ancient language was close to the ancient Finnish language. Later, upon contact with the Slavs, the entire population of Muscovy was retrained into the ancient Slavic language, that is, today's Russian. Which, according to historians, is Bulgarian, which is quite natural, since the main settlement of the Slavs took place from the Balkans 3-5 thousand years ago.

What do we see? The second layer of the Russian people is the northern, Nordic. The highest concentration is found in Finland. Well, for this Nordic layer, Russians have the greatest kinship with Finland, the Baltic countries (Estonia, Latvia, Lithuania), Sweden and Belarus. To a lesser extent, the relationship with Ukraine, Poland and Norway. Is it not from this layer that all our Norman theories of the origin of the Russian people originate? Is it not from this layer that the chronology comes from, according to which today is 7353 from the creation of the world? Isn't this the date of birth of that very first Hunnu, a Slavic-Chinese hybrid?

...

By the way, a significant number of Russian tsars - Rurikovichs are from this haplogroup. And the Russian nobility too (<http://pereformat.ru/2013/02/ryurikovichi/>).

Here is this noble, haplogroup N:
Yaroslav the Wise and Monomashichi.
Gediminovichi.

Lithuanian princes Giedroytsy.

Tatar princes Kugushevs.

A significant part of the Tatar Karin princes.

Dynasty of Baku khans.

Two of the three tested (paleo-DNA) representatives of the Pazyryk culture.

Presumably V.V. Putin (northern Veps people).

Further, the following princely surnames: Gagarin, Kropotkin, Khilkov, Puzyna, Putyatin, Vadbolsky. And more: Shakhovskoy, Massalsky, Rzhnevsky, Lobanov-Rostovsky, Koribut-Voronetsky. More surnames: Selivanov, Kozlov, Svistunov, Danilovich, Arkhipov, Mukovnikov, Poturaev, Larionov, Shekhovtsov, Kuleshov, Zabelin, Nazarov, Nikitin, Vasiliev, Matyushonok, Prokopovich. There are mainly Russians, Ukrainians, Belarusians, Poles here. Here are Latvians - Auzins, Lasianis, Vitavskis; Lithuanians - Bagdonavichus, Semenas, Dovydenas, Andreas, Stankevichus, Sabis, Bartaitis, Grusauskas and similar names; Poles - Khilinsky, Kruzikovsky, Novak, Orlovsky, Krupiensky, Buinovsky, Klobukovsky, Moszhinsky, Piotrovsky, Rykatsevsky, Zhukovsky, and so on.

As you can see, surnames with endings in - IN are far from being limited here.

By the way, remembering the Russian tradition to give illegitimate children a truncated surname, it is not difficult to imagine how the surname Putin could appear from the surname Putyatin ...

Group N, or in other words, the Finnish-Ugric one is distinguished by high army abilities, discipline, and cruelty. Do not forget that Finland defeated Russia itself in the 1939 war, which had multiple advantages in strength. Let's not forget the northern ice hockey teams of Sweden and Finland, which successfully compete with Russia and Canada. These people are very courageous as a result of their evolution in the north. And also because of the northern Siberian ancestors. Morals are very harsh and all kinds of "gays" among the Finnish-Ugric peoples are despised. By the way, it was the extermination of the "fagots" that was one of the main slogans during the invasion of the northern Tatar-Mongols and Bolsheviks.

The Finnish-Ugric stratum of the Russian people played a decisive role in the victory over Hitler. However, this layer was also the reason for Hitler's attack. This same stratum today is the cause of concern for the entire Western world. Well, in the USSR, the image of such an exemplary military man was actively cultivated. Let's remember the film "Officers". It is the Finnish-Ugric representatives that are distinguished by a special ability to shout at a person so that he may have a heart attack. Moreover, shouting in Great Russian is allowed, but answering a shout in Slavic with fists is a crime. This is how the Finno-Ugric and crushed the Slavs with their alien mentality. Shouting, obscenities, contempt for reason, contempt for softness and kindness, the cult of the fool are the main elements that brought the Finno-Ugric to the Slavic civilization.

The invasions of both Napoleon and Hitler were most likely echoes of the more ancient invasions of the Golden Horde. And most likely the Slavs would have obeyed both Napoleon and Hitler without sacrifice, as they obeyed the Golden Horde. The decisive role in the victories over Napoleon and Hitler was apparently played by the Finno-Ugric stratum of the Russian population.

In the scientific literature on haplogroups in the modern era, there is a certain "shake down" of the designations of haplogroups, in connection with which the secondary letter designations are often changed. Therefore we are here about let us specify which of the subgroups of group N we are talking about. About that one.

And the youngest haplogroup: R1a - 47%.

And finally, the main component of the Russian people is the haplogroup R1a. Let's pay attention right away: the concentration of R1a in Finland is low in comparison with all neighboring countries. This indicates that haplogroup N gave a worthy rebuff to the invasion of R1a from all sides. Or has the ability to squeeze

out all conquerors later. Or she exterminated the Slavs who had previously lived here.

The resettlement of the haplogroup R1a has already been caught by historians. These are all kinds of "epochs of great migrations", epochs of great upheavals in Europe, campaigns to the west and back to the east.

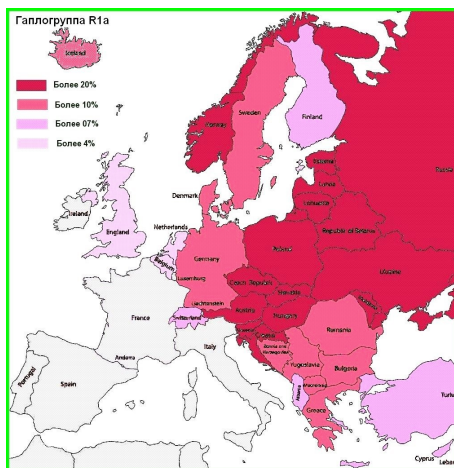

Figure 62.

Let's see who we are related to in this haplogroup? Again Belarus, Ukraine, the Baltic States, Sweden, Czech Republic, Slovakia, East Germany, Austria, Hungary, Slovenia, Croatia, Romania, Bulgaria, Serbia, Macedonia, Greece, Iceland. And to a much lesser extent Turkey, Albania, Switzerland, Belgium, Holland, England.

Countries related to Russia in haplogroups, these are the traditional countries of the former socialism, these are the countries of the former USSR, these are the countries bordering on Russia. It's just that today the West, under the influence of the United States, has greatly expanded its influence and ruined many peoples for itself. This is the result of political mistakes by the authorities of the USSR and modern Russia.

R1a is basically close to the R1b group, on the same Altai (Turkic) matrix. Only their settlements are divorced in time and space. In places and at times they crossed. The path of the R1a

group is also not easy. At first, she moved east, absorbed all small peoples and created a powerful state (Southern) Tartaria.

Figure 63.

On the above map, Muscovy is still considered a Slavic country by inertia. Although the main population is already the Finno-Ugric.

The main language in Southern Tartary was Russian. Or rather Sanskrit. SANSKRIT = ZIONSCRIT (© ChurlyaeV). In that era, no one hid belonging to Zion. We were proud of this. The name HABER was proudly borne by all Jews. Zion ruled in all countries and peoples. The Zion mentality was dominant until it was crushed by the Finno-Ugric mentality, which despises "fagots", clever people and other representatives of Zion.

Southern Tartaria never joined the Finno-Ugric Muscovy. Which can be seen from the above map. With the exception of those eras when Muscovy was under the yoke of Southern Tartary and paid tribute to her. This tribute was called Yasak, and those who paid this tribute were called Yasak or pagans. This is where the term LANGUAGES came from - those who paid YASAK (© ChurlyaeV). Initially, this did not carry any religious meaning. During the 300-year yoke of the Golden Horde, all Muscovy was retrained into Russian, that is, the Tartar language.

It makes sense to pay attention to one more loophole for counterfeiters. And one more reason for historical mistakes. There is the people of MAN-GALLA - they are, in fact, GER-MANZY. Here the commonality of the words GALL-MANIA and GER-

MANIA. Most likely, the name MONGOLIA originated from the term MAN-GALLIA, which went to the narrow-eyed inhabitants who remained here after the departure of the German tribes from Mongolia. In about the same way as the name KAZAK-STAN went to the narrow-eyed tribes who remained here after the Slavic Cossacks left to the west. That is, the return movement of the Mongoloids is observed again.

Another branch of the haplogroup R1a went south and settled there in India. But that's a completely different story.

Tartary successfully fought China and pushed it back to the borders that are today called the Great Wall of China. Apparently it was built by Chinese prisoners and slaves under the supervision of Slavic overseers.

German tribes played a significant role in Tartary. Later they all went to Europe, but left many traces in linguistics. For example, MAN-GALLIA = MONGOLIA = MANCHURIA. Or RUS = REICH.

The stellar era of Tartary (who spoke Sanskrit = Russian) was the enslavement of Russia and almost all of Europe at the beginning of the 2nd millennium AD.

Figure 64.

However, this led Tartary to death. The European climate, the gentleness of manners sucked in the Tartar nobility. And the top

of Tartary gradually flowed into Europe. And after her (and maybe earlier) and many peoples: Bulgars, Alans, and all the rest. Where they lost their Russian language. Tartary was drained of blood, the ties between the leaders were broken. The same thing is happening today.

Weakened Tartary fell to pieces. The southern part was picked up by China. And the northern part managed to be grabbed by the Finno-Ugric Muscovy, the former colony of Tartary. With the arrival of Rurik, Muscovy from a colony became a metropolis. Russified Muscovites understood that the descendants of the Slavic leaders would present a bill. History will produce an invoice. Mongoloids have always been careful and avoided any risks. Siberia taught me. Therefore, a legend was invented that, they say, the ownerless people of Russia themselves summoned the Finnish-Ugric Ruriks of the haplogroup N to the kingdom. This is nothing more than a legend. According to the official history, Ruriks ruled for 800 years.

Then the Rurik clan allegedly degenerated and a new 300-year count of Russia began after the South Tartar yoke: the Moscow yoke. It was, as it were, a mixed yoke, something intermediate between the Slavs and the Finno-Ugric. It also lasted 300 years of Romanov lawlessness. At this time, the whole real history was reversed to please Muscovy. A slightly different name was coined. RUSSIA instead of RUSSIA = REIKH = TARTARIANS. Ermak's campaign and all sorts of victories were invented (or inflated). Muscovy raked under itself all the former peoples and territories of Southern Tartary.

The Moscow (mixed) yoke lasted until 1917, when internal tension, not without the help of the West, destroyed the power of the Romanovs. An ethnic coup took place and the Tatar-Mongols came to power again. Even the abolition of serfdom, introduced by the Romanovs, did not help. In 1917, the real Finno-Ugric yoke began.

After Lenin's death, Stalin took the stage. He himself is in haplogroup G, but he correctly guided himself on whom to rely

on, and led, saddled the power of the Muscovites and brought it to perfection. And then to the point of absurdity. Gradually, the bass, courageous Finno-Ugrians took all the communist and state posts. Any movement of the mind was forbidden. Even grandmothers selling seeds were dragged to the prison.

One of the pressing problems of Muscovy was access to the Black Sea. The Romanovs also fought many wars with the remnant of Tartary - Turkey. TAR = TOUR. Crimea was conquered. Crimea was purposefully populated mainly by retired military Russians from the North, Muscovites and Finno-Ugriic. That is, the type for the settlement has been chosen ideally.

By the way, this settlement of Crimea by Muscovites played a decisive role in the modern annexation of Crimea to Russia. There are practically no Slavs in Crimea. The population of Ukraine and Crimea does not feel friendly feelings. Therefore, everyone votes in unison for Muscovy.

After the death of Stalin, Khrushchev spoke out against the morals of the Muscovites. He acted like Stalin, like Gorbachev later, on an intuitive level. Khrushchev intuitively took the Crimea away from Muscovy and gave it to Ukraine. Khrushchev made indulgences for the rest of Russia, which were compromised. This froze the situation until the Gorbachev era. Gorbachev again took a step towards the revival of the Slavic diaspora. But the Finno-Ugriic and the hidden down Yeltsin tore the reins from Gorbachev's hands. Yeltsin sympathized with Muscovy. And the power was again seized by the brave Finno-Ugrians. Putin, according to Veps, is haplogroup N. This is a person from the most militarized, bandit strata of the population. Of those in which, according to Zhvanetsky, "the pilots are incredible." And Stirlitz leads the whole Hitlerite Germany by the nose.

Putin is also acting intuitively today. Although it is possible that the court historians told him something about haplogroups and about the Pechenegs. He froze all the gains of the liberals - supporters of Southern Tartary, he does not touch them. But at the same time he enriches his friends. Someone would think so. In

fact, Putin is enriching the Finno-Ugrians. Group N. All his friends are Peter, this is Muscovy. Putin enriches and strengthens Muscovy and its power over the rest of Russia. When all the assets are absorbed by Muscovy, then it will begin a new expansion of haplogroup N.

Slavs.

The tale about "three kinds of Slavs" is a lie invented by the descendants of the Tatar-Mongols. There is only one kind: the Slavs. And there are still Russified Tatar-Mongols, who climbed to the Slavs.

The term Slavs comes from "word" and not from "glory". Proof: Slovaks, Slovenes. The Finno-Ugric also stole and misinterpreted.

There are supposedly three groups of Slavs.

Anatoly Klyosov writes.

Traditionally, the Slavs are divided into three groups - Eastern Slavs, Western and Southern. Eastern Slavs are Russians, Ukrainians, Belarusians. Remember that the Finno-Ugric people in this context are not Russians. Western Slavs - Poles, Czechs, Slovaks. South Slavs are Serbs, Croats, Bosnians, Macedonians, Bulgarians, Slovenes. This is not an exhaustive list, you can recall the Sorbs (Lusatian Slavs), and others, but the idea is clear. Actually, this division is largely based on linguistic criteria, according to which the Slavic group of Indo-European languages consists of eastern, western and southern subgroups, with approximately the same subdivision by country.

In this context, the Slavs are "ethno-cultural communities", which includes languages. In this form, it is believed, they were formed by the 6th - 7th centuries AD (!!! - P.S. - let's remember these dates). And the Slavic languages, according to linguists, parted about 1300 years ago, again around the 7th century (!!! - P.S. - let's remember these dates). But the genealogically listed

Slavs belong to completely different clans, and the history of these clans is completely different.

Therefore, the Western and Eastern Slavs as "ethno-cultural communities" are somewhat different concepts. Some are mostly Catholics, others are Orthodox. The language differs markedly, and there are other "ethno-cultural" differences. And within the framework of DNA genealogy, it is one and the same, one genus, one and the same label in the Y-chromosome, one and the same migration history, one and the same common ancestor. The same ancestral haplogroup.

What is "ancestral haplogroup", or "genus haplogroup". It is determined by labels, or pattern of mutations in the male sex chromosome. Women also have them, but in a different coordinate system. So, the Eastern Slavs are the genus R1a1. Among the inhabitants of Russia, Ukraine, Belarus - from 45 to 50%.

Conclusion - the term "Slavs" depends on the context. In linguistics, "Slavs" are one thing, in ethnography - another, in DNA genealogy - a third. Haplogroup, the genus was formed when there were no nations, no churches, no modern languages. In this respect, belonging to the genus, to the haplogroup is primary.

Since belonging to a haplogroup is determined by very specific mutations in certain nucleotides of the Y-chromosome, we can say that each of us carries a certain label in our DNA. And this mark in male offspring is indestructible, it can only be exterminated together with the offspring itself. Unfortunately, there have been plenty of such cases in the past. But this does not mean at all that this mark is an indicator of a certain "breed" of a person. This label is not associated with genes and has nothing to do with them, namely genes and only genes can, if desired, be associated with the "breed". Haplogroups and haplotypes do not in any way determine the shape of the skull or nose, hair color, physical or mental characteristics of a person. But they forever bind the carrier of the haplotype to a certain stream of settlement, at the beginning of which there was a patriarch of the clan, whose

offspring survived and live in our days, unlike millions of other broken off genealogical lines.

As will be shown, members of the R1a1 genus in the Balkans, who lived there 12 thousand years ago, after more than two hundred generations came to the East European Plain, where the ancestor of the modern Russian Slavs and Ukrainians of the R1a1 genus appeared 4500 years ago. Five hundred years later, 4000 years ago, they, the Pre-Slavs, went to the southern Urals, another four hundred years later went to India, where about 400 million of their descendants now live, members of the same genus R1a1. The genus of the Aryans. Aryans, because they called themselves that, and this is recorded in the ancient Indian Vedas and Iranian legends. They are the descendants of the Proto-Slavs or their closest relatives. There was no "assimilation" of the haplogroup R1a1 and there is no, and the haplotypes are almost the same, they are easily identified. Identical to Slavic. Another wave of Aryans, with the same haplotypes, went from Central Asia to Eastern Iran, also in the 3rd millennium BC, and became Iranian Aryans.

Finally, another wave of representatives of the genus R1a1 went south and reached the Arabian Peninsula, the Gulf of Oman, where Qatar, Kuwait, the United Arab Emirates are now, and the Arabs there, having received the results of DNA testing, are amazed at the test certificate with the haplotype and haplogroup R1a1 ... Aryan, Proto-Slavic, "Indo-European" - call it what you want, but the essence is the same. And these certificates define the boundaries of the range of the campaigns of the ancient Aryans. The calculations below show that the time of these trips to Arabia is 4 thousand years ago.

P.S. In terms of the study of words, the campaigns of the Slavs in Arabia and Africa.

EGYPT = E-TSARIT; (G = C)

COPTS (people of North Africa) = TSARITS;

CAIRO = KING;

SIRT (Libya) = TSARIT;

MISYURAT (Libya) = MY TSARIT;

ARABIA (ARABS) = ARIA, that is, the name comes from there, although the people have changed significantly and have forgotten all their past, etc. See the chapter "Linguistics".

And who is "Indo-Europeans"? From the above it follows that the "Indo-Europeans" - this is the ancient *rod R1a1*. Arias. Then everything, or in any case, a lot falls into place - and with the arrival of people of this kind in India and Iran, and the spread of people of the same kind throughout Europe, and hence the emergence of the Indo-European group of languages, since this is actually theirs, the Aryan language, or its dialects, and the emergence of "Iranian languages" of the Indo-European group, since these are the Aryan languages. Moreover, as we will see below, "Iranian languages" appeared after the arrival of the Aryans in Iran, or, more precisely, not "after", but were the result of the arrival of the Aryans there, in the 2nd millennium BC.

The time of the spread of the "Indo-European" or "Proto-Indo-European" language also remains uncertain, and varies from 4500-6000 years ago, if we take representatives of the Kurgan culture as its carriers, to 8000-10000 years ago, if its carriers are the then inhabitants of Anatolia. Or even earlier. Proponents of the "Anatolian theory" believe that the main argument in its favor is that the spread of agriculture in Europe, North Africa and Asia began from Anatolia between 8000 and 9500 years ago, and reached the British Isles about 5500 years ago. Supporters of the "Balkan theory" use the same arguments about the spread of agriculture, albeit from the Balkans towards Anatolia.

The same applies to the ancestral home of the Slavs. Some believe that the "ancestral home of the Slavs" was in the region of Pripyat and the Middle Dnieper. Others believe that the "ancestral home of the Slavs" was the territory from the Dnieper to the Western Bug, which the Slavs occupied two to three thousand years ago. And where the Slavs were before, and whether they were at all - they consider the question "unsolvable at this stage." Still others suggest that the ancestral home of the "Indo-Europeans" in general were the steppes of the south of present-day

Russia and Ukraine, but still others reject this indignantly. Fifths believe that the ancestral home of the "Indo-Europeans" and the ancestral home of the Slavs should nevertheless coincide, because the Slavic languages are very archaic. Others correct that not "Indo-Europeans", but one of their large groups, thereby hinting that "Indo-Europeans" should be different. Which ones are usually not explained.

Russia is not a single people.

Russia is not a united country. It is a mechanical mixture of two great peoples: Slavic and Finno-Ugric. And it would be fine if they lived peacefully and amicably. The country has an atmosphere of mutual hatred, anger and contradictions in society. Constant wars, external and internal. Constant conflicts, repression, exile, executions.

In Russia, everyone is embittered to the point of exhaustion. And no one understands the essence of what is happening, mistakenly believing that we are one (Slavic ?!) people. And in this state, the state of two rams, rested with horns, we live. But we do not understand this and think that all countries live like this. Anything can be done with such a society. And it will do whatever it wants with itself. This is the same situation of turbulence, without laws and without waiting for the result, and without any logical description. The situation of surrealism. Everything happens as in the novels "Quiet Flows the Don" or "Walking through the agony". Without understanding by people of what is happening. In vain are young people looking for at least some kind of logic in this country in which they were lucky to be born. People are in vain looking for common terms to describe our country. The word "people" is not applicable here, because peoples are different. The word "mentality" does not apply for the same reason. There is a quiet civil war in the country between two different mentality, mixed by the will of fate. And at the level of instincts and ideological fakes such as "Stalinists", "Vlasov" or "Bandera".

Let's imagine that 10 outstanding Russian people and one common person have come together. And this simple man looks at these athletes and thinks: this is what kind of Russian people we are! We are good hockey players (Ovechkin), and weightlifters are good (Vlasov), and MMA wrestlers are good (Emelianenko), and boxers are good (Kostya Tszyu), and mathematicians are good (Perelman), and singers are good (Magomayev), and composers are good (Tchaikovsky) etc. But this is not at all the case. All these outstanding personalities are transnational hybrids and, plus, have received good conditions for development. It makes great people. But this does not apply to the genetics of an entire nation. And as a rule, the children of these outstanding people, even if they follow in the footsteps of their fathers, do not achieve such success. Nature is relentless and always rests on the children of hybrids.

We see how compatible these or those evolutionary layers of mankind are on the example of Europe. It was divided into many small states and thus achieved reconciliation. These states usually differ in a set of basic haplogroups. This indicates that different haplogroups, different time slices of humanity psychologically and mentally strain each other. Even if they began to speak the same language. Up to the outbreak of conflicts, civil wars and subsequent disintegration of the state into parts. The question is, why artificially create indecently huge empires? There is perhaps a defensive meaning in this. This also makes sense of enrichment for the ruling circles, which can rob more of the people. And of course the selfish ambitions of the rulers. There are many more disadvantages. In the modern era, it is enough to have a collective agreement with other countries for defense. Everything else is from the evil one.

This problem must be solved and not left to chance. Because we have already lost more than 100 million of the population, mostly Slavs. And the process is far from complete. We are surrounded by the strongest powers, catching up with us in numbers and far ahead of us in terms of economy. USA, China, Japan, Germany,

England, France, Italy. And our potential Slavic allies Poland, Ukraine, Belarus, the Baltic states, eke out a poor existence. Because of the strong influence on all the Finno-Ugric components, with its revolutions and coups.

Difference between Slavs and Ugro-Finns.

All different peoples feel dislike for each other. The Slavs also feel dislike for the Great Russians. The Ugro-Yakuts have already squeezed Ukraine, Belarus and the Baltic states out of Russia. Previously, Poland was squeezed out. But not only were they squeezed out, they also ruined relations with Ukraine for centuries and will certainly ruin relations with Belarus. And in addition, they celebrate the expulsion of the Polish brothers from Russia on November 4. Which quite claimed the Russian throne several centuries ago.

In general, the speed of events with the squeezing out of Ukraine, Belarus and the Baltic states again makes one think that history is inadequately lengthened. And at the same time, the victory of reason and democracy is far from obvious, what we see in Russia, in which the principle of "tsap-tsaraps" of all human achievements successfully exists, and the people remain primitively stupid.

There is a traditional substitution of concepts. Yes, there are rich people in America, there are also in Russia. There are beggars in America and there are beggars in Russia. But here's the fundamental difference. Whatever one may say, the most intelligent, the most talented, the most cunning, the most calculating people in America are rich. And beggars in America are the least fit and laziest. Yes, there are deviations, there are exceptions. But in general, the Oscar is awarded to worthy actors and directors. I won't say this about writers and artists, I don't know. But Dali and Picasso are recognized in the world. But in science, alas, the mafia also receives prizes. The mafia that has taken root in lying around the collider, black holes, the big bang and Einstein. Computer technologies and space are pushed by

worthy people: Steve Jobs, Elon Musk, Bill Gates. And if I turn out to be a beggar in America, I will say: apparently I am really a fool, I am not fit for anything and so I need it.

And what about Russia? And in Russia, I know for sure: today the richest are bandits, scum, scoundrels, liars and scoundrels. All prizes are knocked down by rogues, scum and scoundrels. All high positions are occupied by rogues, scum and scoundrels. All computer and rocket technologies in Russia are headed by scum and scoundrels, and therefore there are no achievements. In Russia today there is not even an illusion of any kind of justice. There is no law in the country of Orthodoxy. A bandit has ruled in the country of declared democracy for 20 years. Today Russia is a country of crookedness. Russia is a crooked state. And in Russia there is no justice, but only crooked justice. We don't need the truth, give us lies. And give us bow-legged brides ...

Mocking history is already a consequence. It is based on the contempt of the proletarians for reason and education, adopted under the rule of chukhni (since 1917). According to Marx, the proletarians despise the "clever". Chukhnya also lags behind in mental development. It is enough to pay attention to the purchased dissertation of Putin and dozens of deputies, ministers and government officials. But to say directly that they hate smart people would be humiliating. Therefore, the Chukhonts adopted complex tactics. They actively oppose the "homosexuals". Simultaneously and in parallel, they declare all creative people, musicians, scientists, writers to be homosexuals. And in this way, with such a two-way move, they gradually spread rot on reasonable people. That is, as if independent processes. But in fact, this is one process: suppression of reason among the people. What Putin is doing and Stalin is doing does not fit into any logic. This is just bestiality, placed in power. Hence, many perversions in all branches. Including the distortion of science (Lysenko), the distortion of history (the appropriation of the entire Slavic culture, language and name by chukhnya), etc. Including the perversion of various "unions". Union of Writers, Union of Composers, etc. in

which the entrance was closed for real writers and real composers. Today we are witnessing the perversion of democracy.

This is how alien genetics adapt. As soon as the Slavs take power and live according to the Slavic laws, according to the Slavic mentality, the "Great Russians" begin to rage and arrange a revolution. This was done under Nicholas II, and so was done under Gorbachev. This was done in ancient times. Let us recall the tsarist coups. And as a result, the descendants of the Tatar-Mongols always end up at the top. Their lust for power and greatness is inadequate.

The feeling of greatness is a pathology inherent in most Yakut-Slavic hybrids. These are the magic tricks of genetics. But there is also a fundamental principle. After all, everyone knows that the Chukchi consider themselves the smartest. And all the other Mongoloid peoples. And when, when hybridizing with the Slavs, they receive a beautiful Slavic body, they are very proud of this and love to show it off.

Figure 65. Plato's Tatar bastard Privalova is so proud of Slavic gorgeous white body ...

Apparently, these were the Tatar-Mongol khans. Who were also proud of the beautiful Slavic body.

Attention should be paid to the allegedly "folk" traditions of wearing kokoshniks on the heads of Russian Finno-Ugric women. It is very likely that here, according to Freud, a pathological sense of greatness is given out.

However, the greatness of the Muscovites = Finno-Ugric climbs from everywhere. Starting from a huge occupied territory. Moreover, what is typical, when the ancient Slavs advanced, they

drove the Mongoloids to the places where the Chinese wall passes. But when the Finno-Ugric come to power, an offensive to the west and a retreat in the east begins. Today, all processes are leading to the fact that Siberia will become Chinese, and all Slavs will be kicked out of Kazakhstan. The so-called "show-off" is a pathological greatness. They seem to be on their own, but it turns out that they have a genetic hybrid nature.

In Russia, 20% of haplogroup N, and for the most part it is in a mechanically mixed state with the Slavic haplogroup R1a. And in Russia 45% of the Slavic haplogroup R1a, with some (in the north) in a mixed state with haplogroup N. Further. Haplogroup N are Mongoloids, Chinese, Yakuts. Their ancient way of life in Siberia: poverty, dirt, years of not washing, cold, dog-eating, and to this complete collectivism, equalization, communism. Otherwise you will not survive. That's where communism comes from, that's where leveling comes from. The Slavs do not want such a life. The Slavs want to live like Europe. We have two incompatible peoples in our country. Chukhontsy (these are Chinese with European appearance) and Slavs. Chukhonets Lenin made a revolution. And we will fight and destroy each other indefinitely. Until we split up with the Chukhonts. It is necessary to draw a scientifically sound border. And all the Chukhonts go there. And all the Slavs from there. Give everyone a million for troubles, moving and exchange of apartments. Communism was born by the Mongoloids and their mentality.

Have you read a lot of novels by Chinese writers? Do you know a lot of Chinese scientists? They are not here. Because in their evolution, the Chinese have lagged behind in talents. But on the other hand, they were overtaken in collectivism. This is where the wind of communism blows. He is again in the same "scratch-and-scratch" policy. And today they amaze the world with their collectivism. With its construction projects, technologies. But this is all stolen technology from the west.

Well, what kind of hybrid people that arose at the junction of the Mongoloids and the Slavs? And this people is called differently in

different places, Ugrians, Chukhons, Vepsians, Chud, Vod, Vyatichi, Krivichi, Udmurts, Mari, Chuvash, Mordovians, Muscovites. Summarized: Russians. But not the Slavs. This nation has already spread across Europe. And outwardly you cannot tell from the Europeans. They are very collective. Friendly. And stupid.

Belarusians are Slavs, like Ukrainians, like Russian Slavs. But the Muscovites and the entire north of Russia are Chukhnya, not Slavs, haplogroup N, hybrids of Slavs with Yakuts. These are the former Huns and Tatar-Mongols. Putin is one of them. He is afraid to openly discuss, because everyone will understand his stupidity and deceitful essence.

In the north of Russia live Mongoloids, haplogroup N. The rest of Russia is inhabited mainly by Slavs, haplogroup R1a. At the junction of these two haplogroups, wars took place in all centuries, with the destruction of men and the capture of women. This is how the Great Russian people were born. The Great Russians are the entire north and east of Moscow. There are about 20-30 million Great Russians in Russia. This is a lot. This people is distinguished by the fact that in the process of ancient wars, violence, selection, it received a European appearance, but remained Chinese from the inside. This is what the Russians are. These are not Slavs. It's like inflatable dicks. Outwardly the same, but inside the air.

It is not worth replacing the genetic concept "Russian" with the concept of "Russian language". And you shouldn't substitute ethnos and culture either. This is stupidity and a crime. Today Russians are Muscovites = Chukhonts = Ugrians = Mordovians = Udmurts = Mari. According to the scientist, this is haplogroup N. And the Russian language is acquired for them. But for Ukrainians, Belarusians, and Russian Slavs, Russian is their native language, it is at the core of Sanskrit. This is haplogroup R1a. And giving up the Russian language to Ukrainians is an unforgivable weakness.

Since 1917, Chukhonts have been in power in Russia, savages whose native language is abusive. Under the control of the Georgian also savage Stalin. They enriched the Slavs with this language. Chukhni surnames usually end in -IN, YN. But there are also quite a few Slavic endings. Look above what surnames are in power today.

The main Russian secret is that Muscovy is not a Slavic country. These are Chukhonts, a mixture of Yakuts and Slavs. Mordva, Udmurtia, Chud, Vepsa, Mari El, Nenets, Muscovy. They have a Yakut insides, they are inside the Yakuza. And the appearance is Slavic. And so Muscovy subdued the entire Slavic country. Chukhontsy think in pictures. That is why no one understands Putin's logic, and he himself does not understand the criminal code and does not respect the constitution. Today Muscovy is openly plundering the entire Slavic world. And she is not ashamed to do this, just as cows do not hesitate to piss and shit in front of all honest people. And with the collapse of Russia, all Slavs will be left without nuclear weapons!

Through deceit, sometimes weapons, sometimes poison, hunting tricks, sneaking, snitching, the Chukhonts crawl into power and, at their behest, the whole story was reversed. That is, it was not they, the wild ones, who climbed up to the Slavs, but the wild Slavs who climbed up to them culturally. They misinterpreted everything. I'll clean it up. And in addition, Putin from Chukhon today tells everyone that nothing was done in the USSR except galoshes. This is why they did not do that because you Chukhonts were in power. And today you Chukhons are in power again. And again you will not do anything.

Undoubtedly, ethnic conflict is at the heart of all Russian troubles. It is not obvious, like the entire internal Russian conflict. Zasorin is a Chukhonskaya surname. From the Ugro-Chukhonts. Sino-Yakut branch of evolution. Golubnichy is a purely Slavic surname. These are actually two different people, two species, the coexistence of which is impossible. Between them there are 80,000 years of separate evolution. So it worked. We are talking

about the conflict in Blagoveshchensk in the Amur College of Construction and Housing and Utilities. Student Zasorin started shooting, as a result of which five students were seriously injured. One of them Golubnichy died in the hospital.

What does Russian trace mean? What was this trail? Was it a Slavic trace or a Ugro-Chukhonsky trace? Alas. According to the historical tradition and lack of understanding of the authorities, this was the Ugro-Chukhonsky trace. With all the benefits for the same Finnish Chukhonts (only of an earlier spill and cleaned by the Swedes), and all at the expense of the oppressed Slavic population. Bad tradition, gentlemen! Bad! Ukraine could not stand it, rebelled. The Balts could not stand it and rebelled. All are against the "Great Russian", but in fact the Chukhon tradition. Enough! How long, mother, will we endure chukh on our neck ?! And with it and Chechnya.

Today the new Chukhon bald devil has been ruling Russia for 20 years. We see what he brought the Slavic people to. Fuck the Slavs, this rubbish on the neck?

Who are the Slavs? - This is haplogroup R1a. It was they who settled as far as India, created the Sanskrit language, and drove the Chinese as far as the wall, which they forced the Chinese to build in order to be remembered. And who are the Chukhontsy = Great Russians? - This is haplogroup N, this is the north of Russia. It was they who in the old days attacked and took prisoners away, raped Slavs, took them as wives. And they captured mostly beautiful ones. This is a shame that they spoiled the genetics of the Slavs. As a result, a mixed people was created: Finno-Ugric = Great Russians = Ugrians. Most of the Ugrians settled in the European part, in Muscovy, the Baltic States, Mordva, Udmurtia, Chuvashia, Mari El. Ugrians are mentally and ethnically Chinese (Yakuts), but with a European appearance. They are prone to collectivism and communism. It was they, under the leadership of the Chuvash Lenin (= Ulyanin), who made the revolution and bloody purges. Let us recall the purges of the Red Guards in

China. These are the cruel yakuza. Yakuts and Yakuza of the same root. They are very dangerous.

Northern peoples are not one people. There were many settlements of northern peoples. There were several streams of resettlement. In fact, in ancient times there was a small population. Therefore, one successful attack by a small army led in 500 years to the emergence of a new people in this place. The Russ are one of the streams of settlement of the northern peoples. Finns and Scandinavians are a completely different stream. And there was also the most ancient stream, and not one, that reached Rome. But these were not Russians.

The first "Maidan" was in 862 with the arrival of the Great Russian Rurik. Nobody called him, then historians made it up. Nobody needed him fucking. He just learned Russian, and then came as Russian and seized Kiev and power in Slavic Rus.

The Slavs Romanovs took power after the Ruriks brought the country to complete impoverishment and troubled times (like Putin is today). At the same time, they themselves degenerated, their surname disappeared. However, the people themselves who came with the Ruriks did not disappear anywhere and today they make up 60% of Udmurtia and a significant part of Muscovy. The Romanovs ruled Russia from 1613 to 1917. And then the Finno-Ugric came again. Because of the foolishness of the crazy Lenin, charged with the crazy Marx.

You need to understand what has been happening in Russia since the invasion of Rurik. Rurik (haplogroup N) is the capture of Kievan Rus (haplogroup R1a) by the Finno-Ugric peoples. These are very different, incompatible flows of settlement and different mentality. And since then there has been a bloody struggle between these streams and it can end only with the separation of Muscovy from Russia. Forever and ever. For eternal times. Although one language is accepted, it is the Slavic language. This is nothing, dozens of countries speak English, but they do not feel love for each other. The Finno-Ugric stole everything: the language, and the name (with the change of Rus to Russia), and a

huge primordially Slavic territory. Moreover, they squandered and lost (in favor of the Mongoloids) a significant part of this territory, in particular Manchuria and Kazakhstan.

All the conquests of the Great Russians did, firstly, from the Aryan countries, and secondly, not with their own hands, but with the hands of the Slavs! The Crimea was conquered by the hands of the Slavs. Which is controlled by the Finno-Ugric authorities today. Both Napoleon and Hitler were defeated by the hands of the Slavs. The hands of the Slavs defeated Chechnya in the 19th century. It was defeated again by the hands of the Slavs in 1999 under the leadership of Putin. And today she sits on the neck of the Slavs. Who needs it? This is only needed to support the current government by the Chechens. Today the Finno-Ugric authorities are sucking all the juice from the Slavic majority for the improvement of Moscow.

Yes, we should not cling to the Moscow Empire. She has outlived herself. Civilization and scientific and technological progress made a large territory meaningless. People live well in small areas. England, Sweden, Norway, Finland, Holland, Belgium. Let's better prepare for the collapse of Russia and not repeat the mistakes of the collapse of the USSR. So that the borders do not pass along random lines, as happened with the Crimea and northern Kazakhstan. So that the Slavs do not suffer. There are 10 million Russians living throughout Siberia, mostly Slavs. We need to take care of them. We need to bargain with China. Let him set up housing for 10 million people in our European part. Let's move culturally and give up Siberia. And let them occupy our cities, Novosibirsk, Krasnoyarsk and others. Those who want to become Chinese, who love narrow-eyed peoples and the Chinese mentality, let them stay in Siberia. You can't steal in China! Think!

But one should not go to the other extreme, push back and not surrender the territory to China. Moreover, the territories are largely enriched with Slavic genes. All seceded territories and

peoples must have independence. We must remember that one day China will also fall apart.

One of the instinctive aspirations of a person is to take a high place in society. In the United States, such a place is inherited and legalized in many ways. For more than 100 years in Russia, the rootless Chukhnya, a mixture of Slavs and Chinese, has been in power. In fact, this is the basis of the Russian "nation". This is an analogue of mongrel dogs of casual street mating. And there is no social hierarchy here. Here they easily penetrate from rags to riches and back.

Chukhonskoe obscurantism on the march. ALL TEXT SOURCES will be strangled, including the constitution and the Criminal Code, for the Chukhonts think in pictures and reason in terms of concepts. Both texts and logic are alien and disgusting for them.

We are not brothers! And the Chukhonts are not Slavs! This is who is killing each other. No Kadyrov will ever rise above the Slavs. Chechens do not fucking need the Slavs to feed these breeding savages. You will never hear a song by a Chechen composer and a novel by a Chechen writer. The time of internationalism has passed. We must decisively dissociate ourselves from all Chukhonts and Chechens and create a single Slavic state. And live according to the laws of the Slavs, and not according to the laws of the mountains, Sharia or the north.

Russians = Rusichi and Finno-Ugric (Russian-speaking) = Rusyns - that was the ancient terminology. But everything is forgotten and lost. A loud voice - here it is, the language. Several reasons are intertwined everywhere.

Why is the Slavic people silent and enduring? Because they don't have pathological arrogance. Here is a genocide of arrogance. When the Slavs are in power, the Finno-Ugric climbs out to the revolution because of arrogance. And when the Finno-Ugric are in power, the Slavs endure. That is why it is necessary to divide these peoples.

What are Russians.

Remember Pushkin's story "Shot"? About the hatred that comes from nowhere between officers, soldiers, between people. In life you meet with many people. But one day you meet a person who behaves incomprehensibly and annoys you. And hatred begins. Fierce hatred, which, according to biblical stories, ends with the skinning of a living enemy. Hatred, which leads to bullying between soldiers, leads to duels between officers. Hatred arises and exists between people. There are people who cannot exist together because they hate each other.

Hatred also exists among animals. Dogs and cats hate each other. At any level. A pack of dogs kills a cat. Big cats, lions and tigers, kill hyenas, jackals, and all the barking dogs in the village. They hate dog barking. This is exactly the same human barking. And quiet smart people hate their barking relatives.

Approximately 30-50 thousand years ago, when the most advanced haplogroup was N, and Siberia had an acceptable climate, part of this haplogroup moved to the north. The other part remained to the south and continued on its way to South Asia. After several thousand years, the climate in Siberia cooled. And grouping N in Siberia faced enormous difficulties. Snow, snow blindness, blizzards, greatly changed this people and led them to narrow-eyed. But not only the appearance has changed. In an effort to survive, the inner essence of these people has changed. Maybe they lived in yurts for many people. Maybe they hunted mammoths together. They became collective. Even worse: they survived only by destroying all mammoths and other ancient giants. They mastered reindeer and dog breeding later, when the mammoths ran out. Of course, all the processes described did not have an absolute and total character. But on average, what happened was that a Mongoloid nation was born. With a collective core. All selfish people who sought to stand out were destroyed. In about the same way as kulaks were deported to Siberia.

Later, part of this haplogroup acquired the O mutation, which spread to the southeast and formed China. At the same time, another part of the NOP grouping partially evolved into haplogroups, sequentially, P, Q and R. Once again, these processes of settlement took place not in a pure, but in a statistical form, with very different variations.

Proceeding from the southern part of the NOP group through P and Q, the haplogroup R settled to the west, in the Urals, then stratified into haplogroups R1a and R1b, which settled in Europe in different ways.

Meanwhile, another part of the narrow-eyed (northern) haplogroup P, in the form of its derivative Q, moved to America and settled along North and South America.

Then, for several thousand years, famous historical events took place in Europe, ancient Egypt, Italy, Greece until Columbus discovered America. After that, all the gopota from Europe rushed to America, ruthlessly exterminating their brothers, the American Indians Q. Q and R are standing side by side ...

Later, the Americans, without hesitation, dropped atomic bombs on Hiroshima and Nagasaki (groups O, N, D). And the British did not hesitate to add Chinese (O, N) to drugs, exterminating millions. It is generally accepted that with this they wanted to intimidate the USSR. Yes, they did. Although they did not understand what the USSR was. But the essence of what was happening was that the Erbins R1b did not feel any brotherly feelings for the Mongoloids. And also to hybrids of Mongoloids with Slavs.

But the story doesn't end there. Since its inception, the haplogroup R has been in continuous contact with the narrow-eyed haplogroup N and its derivatives along the north of Siberia. This occurs in parallel with the dispersal of haplogroup R to the west and haplogroup N also to the west. So they moved, constantly at war with each other. And in these wars a new, hybrid, Finno-Ugric nation was born. It is a nation with a European appearance and Mongoloid psychology. This is the

greatness of Russia and its unpredictable path. But this is both the tragedy and the fall of Russia. About 20% of today's Russia are people of haplogroup N. Of these, a significant part have a completely European appearance, but the Chinese are inside. Approximately 45% are people of haplogroup R1a, with a completely European psychology, but among them there are many narrow-eyed. These are quite comparable values and the influence of those and these cannot be neglected. All kinds of impurities in the nation, even at 3-5 percent quantities, have a strong influence on the mentality of the people. And this 20:45 ratio undoubtedly makes a very big difference.

The result of these collectivist features of the Russian people was a strong lag behind civilization and progress, which was hampered by rejection of the achievements of single geniuses. Civilization is built by the efforts of individuals. The result was numerous wars and uprisings against the king, the last of which was the 1918 civil war.

Today the situation is tense again. The main conflict takes place between north and south and is pumped up by western Europe. This conflict will never end until we

The story of Oleg Tabakov and his first wife.

By the way. Do you know that the real name of Tabakov is Utin ?! It's almost Putin. He is an adopted son in the Tabakov family. So if you want to know the essence of Putin, look at Tabakov. Who was cheated for 700 million by the end of his life, and where did he get these millions? Right. Cheated the actors of his theater.

What is the tragedy of Tabakov's first wife, Krylova. So.

- 1) Krylova has a Slavic surname and is most likely a Slav.
- 2) Tabakov has an original Finno-Ugric surname Utin. Exactly the same Finno-Ugric surname Zudin. Soul kinship worked. This is how she took Zudin Tabakov away. Yes, a dog can take root in a wolf pack. Maybe even find a partner. But one day the wolf meets the she-wolf and the choice will not be in favor of the dog.

- 3) Finno-Ugric, these are the descendants of the Tatar-Mongols, who massacred the Slavs and settled in their homes. Over the centuries, they got used to it, adapted, but the gangster's insides cannot be changed. Hatred of the Slavs cannot be canceled. Today they rule and we see how they rule. They have ruled since 1917.
- 4) Look at Tabakov's children from his first marriage. They are somehow strangely dark. But this is easy to explain. Finno-Ugric are Yakuto-European hybrids. Therefore, the Yakuts are often seen in their appearance. For example, the same Konchalovsky's son Yegor has a clearly Mongoloid appearance. Yes, and Nikita Mikhalkov. This also manifested itself in Tabakov (Utin).
- 5) As reported in the YouTube video, Krylov's mother lost contact with the children. Yes, it is understandable, because children are not Slavs. Children are Finno-Ugric, at least half.
- 6) That's the whole story. Tabakov was initially loyal to Krylova, lived with her. Molested young girls, looking for his Finno-Ugric star. And I found her in the face of Zudina, And she found him. And she bore him two Finnish-Ugric, not Slavs.
- 7) And those around you grumble, they say, what a disgusting Zudina. That is how it is. These are Tatar-Mongols, they are hateful to the Slavs. As well as vice versa.

How to position yourself for the Slavs to small nations.

About fraternal peoples. There is a single Slavic people, divided only geographically, and therefore according to the local linguistic dialect: Ukrainians, Belarusians, Russian Slavs, Poles, Czechs and others. This is haplogroup R1a. They are white. There are about 90 million Russian Slavs. But those who call themselves Russians, in fact, these are Slavic-Yakut hybrids, or otherwise dirty Slavs, or Chukhonts, or Great Russians, or Reds. This is haplogroup N. There are about 30 million of these. But they are politically active, and raised by the Chukhontsy Lenin, they have been holding power since then for 100 years.

The equality of all peoples is declared in Russia. Wiggle your brains, rastaman, if you have them, from what hangover 90

million Slavs are equal to 1 thousand of some half-Chinese - Barguzins? What the hell do you need? Fuck goat button accordion? Russia is full of monsters, morons and patients from mixed marriages. From the decay of genetics of hybrids.

You are falling into the same mistake that all Russian leaders and tsars fell into. Nobody needs your Council of the Indigenous Peoples of Russia. This is incredible stupidity. And because of this stupidity, the country will always be headed by representatives of small "indigenous" peoples: Lenin (Chuvash), Stalin (Georgian), Yeltsin (hereditary down), Putin (Chukhonets). Why do the Slavs need it? Why wear Chechens and other "brothers" on the ridge who cut the throats of Russians in 1995? And this will inevitably repeat itself in the future.

Only Slavic nationalism will save the Slavs. To hell with all foreigners. It is necessary to designate the Slavic territory and declare the Slavic, mono-national state of Russia. And all foreigners can enter Russia only with a complete rejection of all autonomies and national languages, territories and borders. In their own language, let the cormorants in their village.

It's much simpler. Both Polish Russophobia and Ukrainian Russophobia, and throughout the world, Russophobia boils down to one thing: Russians are the Chinese from the inside, but in a European shell. This is why Russians are so difficult to communicate. They are deceiving. They do not react in the way expected of the Aryans. And they themselves do not understand this, and those around them do not understand.

Crimea was artificially inhabited by Chukhnia, Russian immigrants from the north. Therefore, the situation is paradoxical: Crimea was territorially Ukrainian, but the population was not Slavs, the population was Chukhonts. These are alien peoples, outwardly European but the Chinese inside. Hence Kiev's dislike for the Crimean population. In fact, Crimea today is Chinese.

Putin did not need either Crimea or Donbass. He just wanted to steal, scabbard. But the military generals pressed and forced to take the Crimea. And they wanted to take the whole of

Novorossiya. But Putin, as an official, has saddled this Novorossiysk direction. At the same time, he condemned the Russian Slavs to poverty with his bridges, championships and echelons to the Donbass. Here's the gist of what's going on. Stirlitz is in power. Classics of spy art.

I will put it differently: the United States has a war only with China. This is the war between the Aryans and the Mongoloids. This is a war between democracy and communism. And Russia and Ukraine are intermediate links in this grater. The main world conflict between Aryan and Mongoloid genetics.

This is how the modern alignment of population and religions looks like © Dubinyansky:

Population			
O + N	1 788 642 109	25,4%	Mongoloids
R1b + R1a + I1 + I2	1 516 135 270	21,5%	Aryans

Figure 34. (repeat)

Religions			
1.	2 419 000 000	33,0%	Christians
2.	1 650 000 000	22,7%	Muslims
3.	948 507 000	14,5%	Induism
4.	468 736 000	7,0%	Buddism

Figure 35. (repeat)

These are the main population groups that influence world politics. As it is easy to see, despite the huge population, religion is generally alien to Mongoloids. For the simple reason that texts are alien to them, they think in hieroglyphs. And no one has bothered to write their Bible in hieroglyphs yet.

Let us recall the secret, not perceived function of religion by many. Yes, religion is a lie and deceives the working people. But it serves the genetic selection of smart and cunning people.

And if in Ukraine, Germany, England, Aryan genetics prevails, then in Russia since 1917 the hidden Mongoloids, Chukhonts = Ugro-Yakuts, have been in power. That is, Chinese genetics.

The USSR is not a fiction. The USSR is the field of all the conquests of the haplogroup R1a, the Aryans. Kyrgyzstan, Uzbekistan, Tajikistan, Afghanistan, Kazakhstan - these are all peoples assimilated by the Aryans. And they are drawn to us. Here it is necessary to annex India, it was also conquered by the Aryans. And the USSR has always had good relations with India. And from the USSR it is necessary to remove for ever the eternal field of conquest of the Yakuts-Chinese - Great Russians, Chukhonts, Vepsians, the field of conquests of haplogroup N. This is an ethnos alien to the Slavs. And we do not want and will not live according to the Chinese ethnic group. We will not build Chinese (Leninist) communism. Or we will build communism, but only with a European face, with a European mentality. If this is possible.

It's not about development. It's about genetics. Do you know pedigree dogs? This is the breed. They give birth to only the same thoroughbred. And sometimes a thoroughbred walk up from a stray dog. And a kind of outwardly purebred dog is born. But inside, genetically - rotten. And the offspring from him is rotten. This is how the Slavs sometimes found themselves under the Mongoloids. This is how the Russians appeared. Outwardly, like the Slavs. Shit inside.

Ukraine is making a historic mistake. She gives her native Slavic = Russian language to the Chukhne = Ugro-Yakuts who climbed in from the north. And she herself goes to the small-town Mova, Russian-Polish surzhik.

With the collapse of Russia, the Slavs will be left without nuclear weapons.

Stalin instinctively relied on the primordial, ancient Russian (not Slavic), Hunno-Chukhonsky, northern stratum of Russia and the USSR. Which by the people, by inertia, was called "Bolsheviks", "Proletarians". Yes, the leaders themselves mistakenly believed that they had roused the Russian proletarians to the uprising. Everything is so arranged that these proletarians turned out to be

predominantly aggressive Hunno-Chukhonts. Which, according to historical tradition, once again, crushed the peace-loving Slavs and established their power.

And just as instinctively, Stalin built all the strategic enterprises around Moscow and to the north. Khrushchev and Brezhnev had no choice but to continue construction. Sarov, Arzamas, Plesetsk - all this will go to Muscovy in the event of the collapse of Russia. If you look at Baikonur from above, then it is at the latitude of Astrakhan and Kerch. It could well have been built on the territory of the Kuban, there is a lot of space there. It was possible to put astronauts on the Caspian Sea, like the Americans. Apparently this was a weak attempt to wrest their lost territory from the Kazakhs. Did not work out. And they lost the spaceport. And they lost the territory.

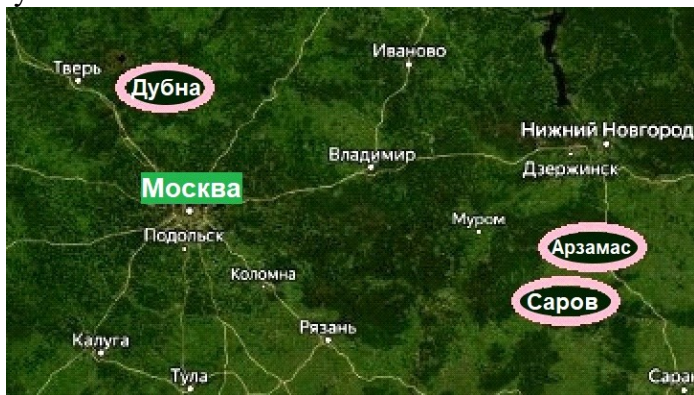

Figure 66.

As we saw in the example of the collapse of the USSR, it happens suddenly, unexpectedly, intoxicated. At the same time, borders and territories are distributed along randomly drawn lines. Approximately how Crimea was given to Ukraine. It will be approximately the same with Russia. All borders will run along random administrative lines. But these lines have already been drawn so that all nuclear facilities will be at Muscovy. And all funds from all over the country are pumped out to Muscovy. And then the Hunno-Chukhonskaya nuclear Muscovy will dictate to all

Slavs how to behave. And she will again force everyone to unite and continue their slave existence.

For several years now, everyone has already noticed that Putin is simply dismissing generals in batches. I would venture to suggest that in place of the dismissed Slavic generals, the Hunno-Chukhonsky are appointed, with the ending of the surname in -IN or at the place of residence of Mordovia, etc. So that there are no riots when the military units will go over to the Hunno-Chukhonts. Mongoloid Shoigu today, the Minister of Defense is also not accidental. Mongoloids, Chinese and Hunno-Chukhonts are related. These are haplogroups close in time and origin. As if there was no one to put up after the dismissed ethnic Slav Serdyukov, as if Shoigu turned up on the arm. In fact, Putin's cunning plan to compromise the ethnic Slav Serdyukov and staging the Mongoloid Shoigu. This operation is akin to the question: if not Putin, then who? If not Shoigu, then who? Everything is prepared, all competitors are removed.

If you analyze the layer of fools, then among them there is still the smartest. And this is exactly what Putin is today. That is why putinoids ask the question: if not Putin then who? They mean only their own social stratum of fools, opportunists, and the nomenclature. Of course, there are more worthy people. But they are from other layers.

Thus, Ukraine and Belarus have already been barred from nuclear weapons. European Slavs have long been removed. Further, the Russian Slavs will be removed. That is, the entire Slavic world, except for distant India, is deprived of nuclear weapons. There is no need to comment on who will get Siberia and the Far East in case of disintegration. There is no place for the Slavs. Then they will be kicked out of Kazakhstan.

Remember what powerful economic ties were with Ukraine in terms of military cooperation? Everything is destroyed to the ground. Whose game is this? One thing is clear, this is not a Slavic game. This is someone else's game and we are pawns in it.

But there is also a plus. Then the Slavs will join together under the wing of NATO. And finally, the dividing line between Europeans (thinking texts) and Mongoloids (thinking drawings and hieroglyphs) will be marked. The main front line runs between China and NATO.

What Ukrainians and Russians need to do to reconcile.

Yes, the Slavs are one ethnic group. One people. One haplogroup R1a. We are one Russia. Due to the large territory, many communities were divided, removed, and often quarreled. This is a natural process. But something started about 2,000 years ago. Because of the Slavic natural tolerance and kindness, Russia was settled from the north and east, let's say, let's take this term, Chukhonts. If there are Chechens, why not Chukhonts? They are also called Tatar-Mongols. They are even earlier than the Huns. Somewhere they settled, somewhere they conquered. In terms of their spiritual organization, this people is much closer to the Chinese. Haplogroup N2. They are related in mentality to the Gypsies = Tse Huns. Not to be confused with the Finnish haplogroup N3, they parted with it 7000 years ago. Haplogroups R and N in their ancestors P and NO diverged about 40,000 years ago. This is a lot. During this time, the Chinese (haplogroup O) became narrow-eyed and differ greatly in mentality. Worse, the NO group evolved towards thinking in pictures, which manifested itself in writing in hieroglyphs. And we, Europeans, do not understand at all how they write these hieroglyphs. And for them this meaning is. Thinking in pictures is also noticeable in our president (haplogroup N). He does not delve into the textual part at all, he is not friendly with texts and computers, does not have any social networks. He doesn't want to remember promises. He cares about the picture in which he stands on the mountain, and the crowd is below. And in his hands is a purchased scholarly dissertation.

They conquered or settled, mixed. But the ancient Chukhon klikuhs remained, which were later formed into surnames, and

many surnames turned out to be similar to Finnish ones. Only the Finns have them on -EN, and the Russian ones on -IN, -YN. Currently, the Chukhonts live in a mixed state in the northern part of European Russia. The Chukhonts mostly adopted the Slavic Russian language, perhaps they contributed something of their own. It's not even possible, but definitely brought in. Huns = Muscovites brought the obscene Ugric language to Russia.

Ukrainians must admit that their language is one of the dialects of the Russian language, which was influenced by various states in which the territories of modern Ukraine were located.

The main Slavic language is today's Russian. With slight regional variations due to mutual remoteness. Ukrainian, Belarusian, Voronezh and others. The rejection of the Russian language by Ukrainians is due to the rejection of the Chukhonts living in Russia today. As Lomonosov said, if it is added somewhere, it will be taken away somewhere. The Chukhonts climbed into Russia, stuck in and squeezed out Ukraine. And today Ukraine is forced to abandon its ancient Slavic language (practically Sanskrit, it reached India itself) and switch to local MOV.

It is necessary to prohibit the imposition of the Ukrainian language as mandatory. At the very least, you need to make two languages the state and give people the opportunity to learn in the language they like. Absolutely right. But the reason is the same: the rejection of the Chukhonts. Ukrainians do not want to speak the same language with the Chukhonts and live with them in a mixed state.

Regarding the actions of the OUN-UPA and their leaders Bandera, Shukhevych, Konovalets, etc. All the actions of the OUN-UPA and their leaders are again the rejection of the Chukhonts. The leaders did not know what we know today, DNA genealogy. And they solved the problems of that time, looked for a way out for the people by those means that were known and understood at that time. They acted on the level of intuition,

instincts. And then they were traditionally defamed by the Chukhonts-Bolsheviks.

Ukraine allegedly took shape as a state and a nation thanks to the USSR. The economic potential of Ukraine was allegedly able to materialize only thanks to the leaders of Russian leaders - both tsarist Russia and the Bolsheviks.

Yes, Ukraine allegedly "took place", but in fact was squeezed out of Russia, just like Belarus, which also "took place". Neither Ukraine nor Belarus had to "make up". We are one Slavic people. But this was forced by the Stalinist leadership, which, willingly or unwillingly, played along with the Chukhonsky and Caucasian minorities in Russia. The obscene Stalinist internationalism, which played out towards evolutionarily and culturally distant peoples (Caucasus, Asia, north, Siberia), national dances in the Kremlin Palace, alienated native peoples from the Russian Slavs: Ukraine and Belarus. Worse than that. The nationalities "Ukrainian" and "Belarusian" were invented, and the "Russians" were left to the Russians, and the Chukhonts and a lot of mentally and genetically alien, enslaved peoples were included in the "Russians". All these are the games of the enemies of the Slavs. Or the actions of amateurs and fools.

You should not substitute concepts. And call chukhonophobia Russophobia.

We are faced with a choice: either - or. Either the Slavs are our brothers, or the Chukhonts. The Chinese expansion to Siberia is inevitably approaching. Because the Chinese and the Chukhonts are brothers. Everyone can see it. Of course, Japan will leave all the Kuril and other islands. And we must not be afraid to face the truth. The best way out, with minimal losses, is to separate Muscovy. Let her reunite it ties in with Finland.

Ukraine.

The Slavic Ukrainian people are abandoning their native Russian language and switching to some kind of "MOV". And at the same time, not Slavs, Chukhonts, Slavic-Chinese hybrids,

Ugrians, an alien tribe, haplogroup N, in the past Huns and bloody Tatar-Mongols, people with European appearance but Chinese mentality, appropriated the Slavic Russian language, appropriated Russian nationality, and squeezed out of Russia two large nations: Ukraine and Belarus. And earlier Poland. This is what has been happening in the last 100 years after the revolution organized by the Chukhontsy Lenin.

Ukrainians! Someday you will understand that Putin is not a Slav. In Russia, since 1917, the Chukhonsk power has been. Haplogroup N. These are externally Europeans, but internally, ethnically Chinese. They used to be Huns. Then the Tatar-Mongols. Then the yakuza.

Ukraine is not a mistake. Russia to the north is 50% non-Slavic. Russia to the north of Moscow is Chukhonskaya, haplogroup N. In fact, these are Chinese in European guise. If in the European part of Russia there are 80 million Slavs, then the Chukhonts are 30 million. And since the time of Rurik, with a break for 300 years of the Romanovs, the rest of the time Russia is a Chukhon empire. And Putin is the last Chukhon king. Ukraine is the rebellious Slavs. Chukhnya threw them out and punished them with Crimea.

How to enslave the great Russian nation.

17 April 2020, 17:29

There is no doubt that the Slavs are a great nation. The Slavs created the Sanskrit language, the descendant of which is the Russian language. The Slavs conquered dozens of peoples and settled from Poland to India.

The Slavs are smart, kind, beautiful, hardworking. They lived according to the principle of the jungle: every man for himself. Is there power? Work, give birth. No strength? Survive as best you can, no one will feed you. From each according to his ability, to each according to his work. And no collective farms, no communisms. If there is a lot of strength, and the bump is large, several wives were allowed, there is nothing sinful about what is

useful for the gene pool of the nation. This was later adopted by the Muslims. If the bump is small or weak, then for God's sake have fun with each other. Nobody is forcing you to reproduce. Nobody blames you for such a natural mistake. So they lived for thousands of years.

And next to the Slavs lived Mongoloids-Yakuts. It so happened for them that fate threw them to the north, where conditions for work and survival are difficult. And you need to mobilize as much as possible to survive. In the conditions of snow storms, snow blindness (which is why they became narrow-eyed). Only collectivism helped them survive. Sometimes several families lived in one yurt. And thus, the harsh climate made the Mongoloids a collective people. It is important for a collective people that no one stands out, does not differ, that everyone is small and bow-legged, and everyone is the same.

Well, where neighbors are, wars happen, captives happen, interracial marriages happen. Who is responsible for the consequences? And so, for centuries, the Mongoloids took away the Slavic captives, and accumulated a Slavic body in themselves. And in the end, the Finno-Ugric people were created, which outwardly has an almost European look. But internally very different.

And then one day a tribe of Finno-Ugric people came to the Slavs from the north and said: we will just live next to you. We will do everything as you do. We will speak your Russian language. We will not fight. - Well, the Slavs said, live in peace. And so they began to live side by side, Slavs and Finno-Ugric.

But the Mongoloid psychology of the Finno-Ugric demands that no one is different. And so the Finno-Ugric began to express: what are you, Slavs, some peasants having fun with each other? Oh, this is not good. - Really? - Said the Slavs. - And what to do. - And you have to kill them, they are bad. - So they are kind of smart men, skillful, they know all the work better than anyone. Why kill such people? - And all the same it is necessary to kill

them, they fagots, - the Finno-Ugric bent their line. Well, that's how they killed all the fagots.

They began to live without fagots. But the Finno-Ugric people are not appeased. - And what is it, they say, some of your Slavs have several wives? This is not good. Some a few, while others do not get it. - The Slavs listened. They believed it. And they introduced a law that all men have no more than one wife. So natural selection was suppressed among the Slavs. Selection of heroes and sages.

And the Finno-Ugric already enjoy authority among the Slavs, they have found equality. This is how they live for many years. Yes, only once one Finno-Ugric said: - but something not all of us live alike. Some are poor, others are rich. It is not right. Everyone should live the same way. - The Slavs thought. - Well, how is it all the same? Someone works smart, brings a lot of benefits. And someone is a fool, he has one weeds in his garden. - But then the Finno-Finn Lenin jumped out. And he proclaimed that the Bolsheviks (read fools) must take power! To build a just society, communism. - And since by that time there were a lot of Finno-Finns around Moscow, and there were also many fools among the Slavs, the Bolsheviks took power. Along the way, they killed millions of rich Slavs, threw them into the Black Sea, and with them smart and newly born fagots.

They began to live and build communism. But the chiefs everywhere were Finno-Ugric or Slavic fools. And something went wrong with the building of communism. - We build, we build, but there is no sense, - said the Slavs. Well, his on fick this communism. Let's live as we lived, every man for himself. - They chose Gorbachev as the leader. Gorbachev began to return back to the natural order for the Slavs, capitalism.

But the Finno-Ugrians have already gained power under the USSR. They were the main people. They owned the KGB. They didn't want to give up power. - Oh, do you want capitalism? So get gangster capitalism! - And they first nominated the Finno-Ugric Yeltsin, a hidden down, hungry for power, in order to

overthrow the Slav Gorbachev. And they threw it off. And they shot the parliament from tanks. And they began to rampage in power. They began to create gangster organized crime groups. They announced privatization, began to build a GKO pyramid. They stole from the heart. And when Yeltsin became bad, he gave the throne to the Finno-Ugric Putin, as the most authoritative bandit.

This is how an outsider small hybrid people, with the help of two or three cunning moves, conquered the great Slavic people ... And some of them fell on the Jews. Who are the Jews? This is just the tip of the iceberg. This is the elite, each nation has its own. Icebergs decide everything, not the tip.

Bananas are not Russian food.

- Of course, the sale of bananas to the Russians is beneficial. They are bought for a pittance, and sold with hundreds of percent of the profit. And when the bourgeois has 100% profit, then see the quote from Marx.

- It is not for nothing that our ancestors have settled and moved across the earth for many tens of thousands of years. No wonder our ancestors received mutations in genes and chromosomes. All this accumulated. All this adapted a person to life outside Africa, outside of cheap bananas. And what is the result? Bananas have caught up with people everywhere, in Europe and America and Asia.

- Yes, bananas are tasty, soft, they are touted on TV. Their chemical analysis is the best. But, apparently, the microflora accompanying bananas is not the same, not ours. This is not ours, not Russian food.

- When a European man eats even one banana, he swells terribly. When I eat a C grade of bananas, four hours later, a revolution in my stomach begins. And it lasts three hours. Can be connected to the Miller pipeline. So it's better to exclude them from your diet. Just like palm oil, it hurts my liver. Everything is possible,

oranges, cabbage, salads, vinaigrettes. Except for bananas. Moreover, so as not to fall into a fool when you are with a girl. - Bananas are everywhere, in all markets. They are inexpensive, they are affordable. They are more cost effective than apples, do not corrode teeth like apples or oranges. But after...

Palm oil is poured into us under the guise of "refined sunflower". But here's the strange thing: refined is much cheaper than unrefined! Also, the solid fraction of palm oil is mixed into butter. For this reason, I gave up butter altogether. It's just not on sale. It is all exported to China.

Great Russians.

A significant part of Russians are HUNNs, forest bandits. Haplogroup N2. Europe cried from them in all ages. Today the Huns are in power. It was the Huns who set the aggressive tone of communication in the USSR.

Not Finns. Finns are N3. Russian Chukhonts are N2. They parted with the Finns 7000 years ago. N3 are less aggressive today, they live quietly in the north, in Finland. And the very scum, forest bandits went further south, engaging in battles with the Slavs. Several times they got out to Europe: Huns, Tatar-Mordvinians.

Stenka Razin again. Kozma Minin, who liberated Moscow from the Poles-Slavs. And so they got out in 1917, when everyone had forgotten, under the leadership of Ilyich. And since then they have not been able to push them. Putin is the heyday of the Huns in Russia.

This is not a USSR tradition. This is the systematic suppression of the Slavic people (R1a) by the Huns (N). The Huns came to power under the leadership of Lenin and continued under the leadership of Stalin, when he intuitively saddled a stream of cattle, successfully choosing a pseudonym. However, like Lenin. Slav Khrushchev seized power. But Gorbachev made a mistake, and the Huns got out of control. Now they do whatever they want with the Slavs, like the Americans with the Indians.

Vodka is the weakness of all narrow-eyed, haplogroups N and O. That is why Russia is overflowing with alcoholics. By the way (!) Kokorin comes up to the Chukhonts by his last name, in -IN. And Mamaev, by the very last name, is clearly from the Tatar-Mordovians, that is, he is also a Chukhon. Descendant of Mamai. So they ended up in the slammer.

To mix historically Huns with Saxons or Slavs? Will not work. The Huns left a clear mark: Hungary. Hungary = Khan Tsari. And the Ugrians means the same thing: Tsars. They considered themselves kings and were called so. The resettlement of the Saxons took place somewhat separately from the invasions of the Huns. And here we still need to figure out if the words SAKSY and KAZAKI are related?

Have you noticed that Hungary somehow falls out of the European countries? And the fact that all narrow-eyed people write in hieroglyphs? And the fact that our prezik thinks in pictures? 40,000 years of separate evolution mean something.

Haplogroups NO (from which groups N and O, Finns, Ugrians, Muscovites, Yakuts, Chukchi, Chinese, Japanese later went) and group P (from which groups R1a and R1b later went, all Europeans, Slavs, Germans, Italians) diverged approximately 40,000 years ago. 40,000 years of separate evolution. Compare the face of a Yakut and the face of a Slav. These are external differences. But there are also strong internal differences. The gorilla is slightly different from the bear in appearance. But it differs even more internally. And the Yakuts are the same Ugrians, the same Putin. That is why no one understands him. None of the Slavs understand his logic. Look at Putin's entourage. Nobody understands them either. We were crazy that we chose such a prezik. However, no one chose them. They took power from Gorbachev by force. With the stupid connivance of the West. Aryans should help each other, not harm.

But it is precisely here that lies the watershed between Muscovy and real Slavic Russia. Real Russia is culture, kindness, laws. And Muscovy is rudeness, this is Lieutenant Rzhevsky, this is swearing

- the language introduced by the Great Russian Muscovy. The Slavs have never had a mate. Mat is the language of bandits. And no matter how much it was banned, it will always be, as long as Russia has Muscovy.

Slavic Rus (based on Ukraine) was deprived of the Russian language, mentality and all eastern territories. The Muscovites took it away. And today Ukraine runs like a chicken with a severed head.

In fact, the Huns = Moskals = Ugrians = Mordva = Mordor = Chud = Vepsians are Chinese, or Yakuza with a European appearance. Mixing result. While the Kyrgyz and Kazakhs are Slavs, they have received a Chinese appearance as a result of mixing. But the Slavs from the inside.

Can you imagine a Chinese in your soul, but with a European appearance? These are Russians, haplogroup N. There are 20% of them in Russia. I came across the Chinese at the Cherkizovsky market. These are absolutely boorish, rude, screaming people. If you can't buy from them, then they shout after: Pinyuka! Apparently this is a Chinese insult, the embryo of an obscene language. The remaining 80% of Russians are predominantly haplogroup R1a, Slavs who settled as far as India. Haplogroup N is also among the Finns (50%) and 20 percent for the Baltic peoples.

These two streams N and R1a, they do not mix and do not assimilate. These are historically very distant streams. And they will always be at enmity with each other, and in such a country there will never be order and wealth. Here the rich do not want to live and are afraid to live. There is one philosophy here: steal and run west.

The northern Nordic peoples are haplogroup N. This haplogroup, with its arrogance, anger, aggressiveness, conquered the huge Slavic state of Russia (haplogroup R1a) and renamed it in the Vologda style to Russia. There were several exoduses of the Huns. The latter is the Baltic Huns, those who are in power in Russia today. And there were also the ancient Huns who reached

Rome. Pay attention: Huns - at the end of 2 letter H. This is not accidental. Compare: Finns, Xi Jinping.

Klyosov mistakenly mixed Russians and Russian speakers. It is not the same. Russians are R1a. R1b is close to them. All other peoples are foreign to the Russians. But Russians live in friendship and harmony with them. However, there is one Finno-Ugric people, from the north, group N, who are inadequately, pathologically power-hungry. And because of them, great problems occur. They have great things and they create great problems too. These are the Huns, they have already gotten everyone with their aggressiveness, arrogance and banditry. Petersburg - this is just them.

Invasions of the Great Russians.

The name "Mongol-Tatars" goes back to the work of the papal ambassador Plano Carpini "History of the Mongols, which we call Tatars". Carpini in 1245-1247 made a diplomatic mission to Central Asia, to the great khan Guyuk. Before that, the conquerors were called in European chronicles only "Tatars", just as they were always called in Russian chronicles (the latter never knew the term "Mongols").

As everyone knows, in ancient times, in the absence of mass media, the same historical events were perceived in different ways in different nations. And different chroniclers set out events in different ways. Even the Gospels of the four apostles are presented in different ways. And also, as the temporal distance from the event, it is also described by different historians in different ways. And also historians often distort history to please the ruling kings. Also, the terms used often have a vague meaning. Etc. History is not science for the most part, but the writing of beautiful legends.

In science, sometimes there are such interweaving, in which it is very difficult to separate the lie from the truth. Just as it can be difficult to separate a developed cancer with metastases from the human body. Such scientific interweaving slows down the general

development of science, creates a sense of a dead end and the impossibility of progress. Because any progress meets a contradiction in terms.

Nevertheless, in the 21st century, DNA technologies have emerged that allow you to create a certain frame of historical events. And to remove from history much that is far-fetched, superficial. And one of the absolutely monstrous legends, which turns the whole story upside down, is the story of the Tatar-Mongol invasion of Russia. Everything in this story was overgrown with beautiful drawings of horsemen, beautiful details of battles and wisdom of commanders, beautiful literary works. But any attempt to provide a scientific provable basis meets an insurmountable wall.

Russian-Yakuts? Slavic-Yakuts? So these are Finno-Ugric and Great Russians! Here's what to call them now. And with these terms we will describe the entire true history of Russia!

The Great Russians came from the north. At first they were the ancient Huns who tormented Europe. Then the Ruriks who conquered Kiev. Then they were Tatar-Mongols who tormented the Slavs and Kievan Rus. Then they suddenly rose up in the form of the Bolsheviks under the leadership of the Great Russian Lenin. Then Stalin supported the Great Russians. And under Stalin, the Great Russians rampaged over the Slavs. But Khrushchev and Brezhnev slightly cooled the ardor of the Great Russians. However, Gorbachev made a number of mistakes, as a result of which the Great Russian Yeltsin came to power again, and then the Great Russian Putin.

The northeast of Europe from Karelia to the Khanty and Mansi beyond the Urals are all Finno-Ugric tribes. The territory in the triangle - Königsberg - Pskov - Vyazma - is the territory of East Prussia - until 1740 - the capital of Mankerman - now Polotsk.

South of Prussia was the Slavic Eastern Polya - the people - the Polovtsians, they had two capitals - the secular one is Pereyaslavl and the church one is Chernigov. It was in Chernigov that there was a Tomos from Byzantium. Chernihiv - until 1700 the capital

of the Slavic Empire - which stretched from the southern part of the Pyrenees - through Greece - Serbia - Albania -Bulgaria - and to the Bosphorus, Tavria and present-day Ukraine-Polyania ...

Now it is clear - that neither the Swedish - Finnish Ingermanlandia - where Moscow Tartaria appeared since 1700 - nor East Prussia - nor the Finno-Ugric peoples from Karelia and beyond the Urals - not the Russians - not even the Slavs - not even the Christians - until 1770 years were NOT ...

How the settlement of the Finno-Ugric took place - this is precisely what is cut out of history. The Great Russians are presented to us as a primordially Russian people. All sorts of "Ruriks" who were "invited" to power are being exaggerated. Recently, Putin was allegedly invited to power. Yeltsin invited. But this is not the case. There was conquest, there was resettlement. Then there was the invasion and resettlement of the Tatar-Mongols. There was a third resettlement in 1917. There was resettlement during collectivization. The Slavs were squeezed out. Chukhnya settled. Today the Slavs are being squeezed out of Moscow. The old people are taken to the forest and killed. And the chukhnya is settling again.

The 1917 revolution has no economic basis. It is difficult to understand, but it is true. A Chukhonsky abscess has ripened in Russia. Fertile semi-wild Great Russians, or Yakut-Slavic hybrids, or for short Chukhonts, occupied a low position in Russia. They lived in shit, in poverty and had a penchant for such a life. But the Chukhonts have, this is their genetic property, inadequate arrogance and inadequate propensity to appropriate someone else's. Putin calls this property "scratch-and-pinch". Therefore, they always climb into the bosses, although they do not understand what needs to be done there. Something like Putin today. So he climbed in, broke firewood, and the country is in the ass.

A very interesting excursion into the settlement of peoples here. But it does not include haplogroups and many stories are dubious.
<https://www.youtube.com/watch?v=UupBZ0wdDmE>

In 1917, the Chukhonsky abscess broke and they took power under the leadership of the Chukhonsky Lenin. But they would have taken power anyway. Because their around Moscow and St. Petersburg there was a majority. More than Slavs. Around Moscow and St. Petersburg, they are BOLSHEVIKS.

This is all superficially. But look at what are the important points.

In 1917, the Romanovs were replaced by the Chukhons Lenin and Stalin, they organized a civil war of the Chukhnyi (they were all beggars) against the Slavs. This was the hidden meaning of the revolution, civil war and the idea of communism. And they took away all property from the Slavic rich and divided it among the Chukhonts. Then the Chukhonts carried out "collectivization" and again ruined thousands of wealthy prosperous Slavs, sent them into exile and shot them. And this despite the fact that there were Slavs, and not a few, who supported the revolution and Lenin. It is very difficult to navigate this world. It is very difficult not to bend the shore. It is very difficult to live next to bandits.

Then Khrushchev seized power (a Slav), Brezhnev supported. However, Gorbachev burst out and gave power to the Chukhonts. But he didn't just give it away, but on the transition to capitalism. And now the chukhnya, which gained strength under socialism, seizes all property and becomes the ruling class! At the same time, clearly occupying a wrong place in society. But this is exactly what Putin needs, because he instinctively strives for a return to the USSR, to communism. He seeks to compromise all capitalism.

Here it is, the castling of peoples. Chukhnya climbed out of rags to riches. And the Slavs were reduced to poverty.

Russian is the native language of all Slavs. Who did not understand: Russians and Slavs are not the same thing. And if we do not understand this, then Russia will perish. There are 30 million Great Russians and 90 million Slavs in Russia. The Slavs are pure Aryans who reached India and settled in many European countries. The native language of the Slavs is Russian. Great Russians are dirty Slavs, Finno-Ugric, a cross between Slavs and

Yakuts, Mongoloids. The native language of the Great Russians is obscene. They stole the Russian language from the Slavs and appropriated the term "Russians" for themselves. Between the Slavs and Mongoloids, 40 thousand years of separate evolution. That is why European Russia is crammed with physical and mental monsters. Discrepancy between Yakut and Slavic chromosomes.

Slavs are R1a. Cossacks are Slavs. What can not be said about the Great Russian. Great Russians are a hybrid mixture of Slavs and Yakuts. Great Russians are Finno-Ugric: Mordvinians, Vepsians, Chud, Vod, Izhora, Muscovites, Udmurts, Mari and others. These are dirty Slavs. They are characterized by pathological arrogance, inadequate ambition and really poor learning ability.

There is some connection between China and Chechnya. But it is much longer. Chechnya has historically always been an ally of the Tatar-Mongols. Together they robbed the Slavs and parasitized on them. And the Tatar-Mongols are in another way the Great Russians, or Chukhonts, the products of mixing the Slavs with the Yakuts. And already the Yakuts are directly narrow-eyed relatives of the Chinese. Putin as a Chukhon is a Slavic-Chinese hybrid, with a Chinese soul and a European body, of which he is very proud and loves to show off his naked torso.

How the Tatar-Mongols survive among the Slavs. Either as proletarians (socialism) or as bandits (capitalism).

Revolution of 1917. What was it.

At first glance, everything looks like a revolution. But a deeper look gives a different picture. let's look chronologically from 1917. So, the liberal public, deceived by the ideas of Marx (false ideas), rushed to overthrow the tsar and liberate the oppressed proletarians. But what happened as a result? As a result, a dull part of the population came to power. I will not now specify the stupid part by nationality, but these are to a large extent Chukhonts, Finno-Ugric. Then the dumb part did what it wanted,

under the guidance of first the crazy Lenin, then the dumb leader Stalin. Then there were the stupid Khrushchev, Brezhnev. The people are tired of stupidity. Clever Slavs united in a trade mafia and created a shortage of goods. The smart ones demanded a smart leader. Smart Gorbachev began perestroika. And the country would have followed the Chinese path. But the old foolish nomenclature, stupid, with inadequate ambitions, came out again. They were already in power. So they turned to capitalism. Yeltsin and then Putin. Yeltsin gave freedom to Chubais and GKO's. He fiddled with wood and fled, gave power to an accidental St. Petersburg gopnik altogether. Don't bother Gorbachev!

Confirmation that the peasant poor were Ugro-Finns, for example, here: <https://www.youtube.com/watch?v=lzTreB-pbpw>. This video is about Napoleon's invasion. And Napoleon was helped by Russian Finno-Ugric militias. Moreover, it was not a class struggle, although at first glance this is so, allegedly the peasants want to take revenge on the landowner. And this was in reality a purely ethnic showdown due to the difference in the mentality of the Slavs and the Finno-Ugric. This is confirmed by Napoleon himself. He said that he could have used the Russian militias in large numbers, but he refused because of the terrible customs of the Russian (= Finno-Ugric) peasantry. Which was distinguished by cruelty and arbitrariness. It is precisely this cruelty that sits today in the modern masters of Russia. Napoleon was good at understanding people.

The idea of communism.

Most people, including myself, perceived communism as a kind of friendly collective. In which everything is fair, right. From each according to his ability and to each according to his needs. It feels good. But at the same time, after all the beautiful words, for some reason, the leadership chose not at all those smart and kind people whom I would like to see there.

In the USSR, there were many problems that were attributed to temporary shortcomings that will be overcome, etc. However, the

temporary disadvantages were not overcome, but only worsened over time. It all ended in a landmark conflict between Yeltsin and Gorbachev, in which the hidden down Yeltsin won and broke a lot of firewood.

What was it? And hell knows. It was crazy. Loss of all landmarks by the people. Loss of ground underfoot. History moves forward, and past events are forgotten.

Among the main problems of socialism is the administrative command system of management. It seems that it was created by Stalin. And it seems like you can't do without it, you need discipline, subordination, etc. What's new here?

It turns out you can. And this new thing is so monstrous that for me it completely negates the entire Marxian and Leninist idea. So, let's take a closer look at what a "friendly team" is.

Some team is being assembled. Let's say a scientific laboratory. And she needs a boss. Who will be the boss? Is it really this skinny bespectacled man who knows a lot and knows how? No. No one will listen to such a boss. There will be no discipline. There will be chaos and confusion who does what and who is responsible for what? Only the most vicious, meanest dude can become the boss, who can control and restrain the aggressive behavior of everyone else. Only a dude who would become the leader in a prison cell becomes the boss. There was a camp hierarchy in the USSR. Of course, such a boss could not invent something scientific and valuable. Therefore, the ideology of "tsap-tsarap" flourished.

Now let us ask: is there something in common between the "communist friendly collective" and the "camp hierarchy"? There is not? But these concepts are inevitably linked. And inevitably one follows from the other in any attempt to create a team. That is, with any attempt to build communism.

With any attempt to create some kind of collectives, the camp hierarchy, mutual anger, inadequate ambitions and anger of the whole society inevitably emerge. And inevitably, leaders of the camp, mafia type, like Yeltsin and Putin, come out. And it is these

leaders who overthrow the attempt to put an intelligent person (Gorbachev) at the head.

Putin restored the administrative-command system, only in a different, capitalist form. That is, everything is the same, but now all restrictions on wealth and greed have been removed. And plus all the socialist abomination remained. And it both interfered with the Soviet economy and continues to interfere with the capitalist one. This is what we must fight against. Putin appoints bosses, appoints oligarchs, appoints successful managers, and believes that this is how it should be, now everything will work.

All who hate the administrative-command communist system that Putin has restored, rise from your knees and destroy it to the ground. Only democracy!

Here they love in Russia to invent all kinds of idolatrous nonsense. And then it is sacred to follow it. Be sure to spit and knock on wood. And other shit that complicates life and gives freedom to your natural aggressiveness. How nice it is to pull a friend or acquaintance. How nice it is to make a friend unpleasant.

Lenin.

What to do with Lenin's body. I already wrote about this once, the article was immediately removed. It is necessary to accurately establish Lenin's haplogroup. Most likely it will turn out to be N. Because Lenin's father is Udmurt. The Udmurts, Mordva, Mari are the center of the Tatar-Mongols = Ugro-Yakuts. And after it is established that Lenin is not a Slav, but a Chukhon who organized a civil war for the Slavs with 10 million victims, then throw Lenin's body from a helicopter into the mouth of an active volcano. And the entire holy Orthodox Church, together with Gundyayev, pray for 100 days and 100 nights to the Lord for the curse of everything connected with Lenin. About the memory of 90 million who died as a result of the consequences of Lenin's revolution.

Under the Decembrists, all the evil chukhnya was enslaved. The country was ruled by the Slavs. And the customs in the country

were European. Chukhnya began to be released by Alexander 1, when he abolished serfdom. It was a fatal mistake for Russia. The most cruel mistake that cost the Slavs in the next century tens of millions of lives and the ruin of the entire order. Chukhnya organized itself, under the leadership of the Udmurt (or Chuvash) Lenin, carried out a revolution = ethnic coup. Then she defeated Europe under the leadership of the Caucasian Stalin. And today she firmly sat on the neck of the Slavs. And threatens the whole world with nuclear missiles. Today the gangster chukhnia is headed by Putin.

The theory of haplogroups today puts everything in its place. There is a northern area of settlement of the Chukhonts. There is a southern area of settlement of the Slavs. And you can't hide anywhere. There are no traces of Mongols in Russia. But on the other hand there is a constant presence of Mongoloids, Finno-Ugric and Tatar-Mongols. So they did everything. And the Ruriks have the same group N. And the Huns have the same group. And you can't get it wrong. No one invited Ruriks to Kievan Rus, allegedly there were no rulers. These vicious merciless bandits came, conquered and kept Russia in blood for 800 years. And then, under the Romanovs, historians diligently erased all the bloody deeds of the Ruriks.

Yakuts are actually Chinese, Yakuza. The Slavs (haplogroup R1a) parted with them 40,000 years ago. This is unimaginably long time ago. As a result of raids, violence, captives, selection, they got a European appearance. But inside they remained Chinese. But outwardly you cannot tell. Who can say that Putin is Chinese from the inside ?!

In ancient times, they were the Huns, ravaging Europe. Then they became Tatar-Mongols. These are bandits from the inside, yakuza, cunning, insidious, two-faced, vile. They think not in texts, like Europeans, but in pictures and hieroglyphs. Have you noticed that the picture is important to Putin? Here he dives, here he flies, here he picks mushrooms, here he plays hockey, here he rides a motorcycle with the Caucasian Zaldostanov. Here he

comes to the leopard in the cage. Here he sets the horses free. So he receives the official and in a low voice explains to him that $2 \times 2 = 4$. These are pictures, they are pleasant to him. He doesn't like texts: constitutions, criminal codes, all sorts of laws, rules, logic. He does not like the computer, keyboard, printer.

Gorbachev wanted to reform the USSR in a Slavic manner. But the Great Russians got out (Chinese in European guise, there are 20% of them in the country), led by Yeltsin, and later by Putin. And they ditched the whole conceived reform of Gorbachev. Gorbachev is not guilty of anything. His mistake - he was in a hurry. It was necessary to act carefully, with caution, with feedback. First, the Great Russian KGB had to be changed to the Slavic one. The KGB decided everything. The KGB did not fulfill the order of Gorbachev to throw Yeltsin into the river. I wonder who the performer was there in 1987? Isn't it Putin? It was not necessary to demolish the monument to Dzerzhinsky, but to disperse the KGB itself.

... Russia became a mono-national country under the USSR? Russia became a Chukhon country. 20% of the Chukhonts crushed 80% of the Slavs.

Returning to Stalin. By 1917, Russia came up with a group of even R1b at the head, akin to Europe, and great prospects for world leadership. Alas, alas. In 1917, the Chukhonts (N) revolted under the leadership of the Chukhonts Lenin. And plunged the country into chaos. Then the Chukhontsev was headed by an even more evolutionarily backward Stalin and the chaos continued. The Aryan West wanted to fight this, they found Hitler's executor, organized a war. But it was not possible to defeat Stalin. The USSR was fanatically obsessed with the idea of socialism and filled Hitler with corpses. After Stalin's death, the initiative was seized by the Slavs: Khrushchev, Brezhnev, Gorbachev. They are actually Ukrainians, Slavs, although they are Jews. They managed to mitigate social aggressiveness. Reconcile all citizens. And even try to build socialism with a human face. Alas, this was prevented again by the Chukhonts N. Chukhonts Yeltsin, and then Putin

again created thieves' chaos, bandit lawlessness. We raised the level of aggressiveness in the country to the pre-war level again.

Slavs, turn on your brain. Don't bury your head in the sand! In World War II, we already defended (in fact) the Chukhonts once and lost more than 20 million Slavs on this. 20 million cultural Slavs to protect 30 million wild Chukhonts. Putin drags and substitutes the Slavs for the last battle, in which the Slavs will be completely destroyed and only the Chukhonts will remain. Politics is the art of the possible. Putin found himself in a situation where the real but it is possible to completely free Russia from the Slavs. And he will do it. All of today's power is Ugro-Chukhonskaya. This can be seen by the surnames.

Bandits are the basis of the unity of Russia.

In Russian, a thief is a thief! Tatars have always been thieves and robbers.

Here is just one comment from our discussion on Mayla. "This is the psychodynamics of the population, and the main godfather has nothing to do with it! This is the mentality, and not kings, not chief secretaries, not presidents have absolutely nothing to do with it, remove one, the population will start growing another "dragon" tomorrow! For the mentality is tough, savage. Society lives in Russia "by the right of the strong"! If you defend your interests in Russia, then you must show the others that you are stronger. The strong have rights, the weak have responsibilities! "

History is a big and complex thing. You can't cover it with one glance. We have to isolate the main defining moments and trace their evolution. Here are the peoples. They arise, move, and gain a foothold in the territory. Some die. Some are still wandering. Let's try to trace the emergence and evolution of one people.

Every nation arises from one person. And it multiplies within the first one family. So, 10-20 thousand years ago, a strong man was born, let's call him the Bandit. And his life was simple as truth. Grew up, created a gang, and went to rob the surrounding

families. There were no courts, no police, no prosecutors then. Do what you want with others until they do the same to you. The gang attacked houses, villages, killed men, raped women or took them as wives. With this method of reproduction, the gangster genetics quickly grew in number and then reproduced through new descendants. A whole people arose, prone to banditry.

Meanwhile, in other parts of the globe, peoples multiplied. Many peoples arose. They fought, mixed, moved, worked. A lot of things happened that were not inscribed in history, because writing was just emerging.

It so happened that the bandit people lived in the north, where sometimes there are white nights.

Once a gang of bandyukov decided to rob the southern peoples who lived richer. The leader was Rurik. They rushed to the South, took Kiev and other cities.

Russia rose from the depths of centuries. She first became Tartary. Different peoples fled from Tartaria. The R1b group fled south and then west. There was a great flight of peoples to Europe (Bulgars to Bulgaria, Mordovians to Moldavia, Huns to Hungaria, Bashkirs to the Basques).

And when everyone who could fled, who had a cart, a horse, left, the bandits took power over Russia. Only the period of power of the Ruriks and then the Romanovs is available to modern historians. It was a bloody time of public executions and torture. Bandits are bandits.

During the reign of the Romanovs there was a rapprochement between the royal family and Western Europe. We learned how to build ships, cannons, make gunpowder and weapons. We mastered metallurgy. And at the end of the 19th century, the basic law of the unity of Russia emerged. This is how it is phrased.

When interethnic, territorial, class and other conflicts are brewing in the country, when two large forces clash at the top, at this time a third force turns out to be free, dynamic, easily controllable and well organized: the bandits. They can have a variety of ideologies, declarations, plans, and so on. But they have

the same essence: they are bandits. They are not afraid of blood, they do not need justice. They pronounce popular slogans, theses (April, May and others). But the main business of bandits is money, power and revenge. Revenge for oppressed parents or revenge for the poor life of parents. Or revenge on the surrounding countries and peoples. They take revenge in full: they send them to a felling site, take away housing, savings, savings, socialize cattle, send whole peoples to Siberia and Kazakhstan, and so on and so forth. They repress, then rehabilitate.

We all remember very well how actively numerous bandit groups appeared in the early 90s. They merged with power, and when they simply left power. The cemeteries of the 90s are overflowing with monuments to dashing bandits and their victims. Take a walk lads! And gave the country a president.

The last big fight between the right and the left was exaggerated by Gorbachev. This allowed the bandit Yeltsin (hidden down, grandson down) to come to power. He later gave power to another bandit.

Prior to that, a big battle between the right and the left took place in 1916, between the tsarist government and the nascent bourgeoisie. Here the third force won, with communist slogans, but essentially a bandit Lenin, who later gave power to Stalin.

How to be? What should ordinary working people do? No elections and revolutions can help here. **YOU SHOULD JUST SURVIVE.** We must live as if it is temporary and there is another, more honest and normal life. You can't help yourself with any games. Anyway, they will be deceived and dragged into a war with Ukraine or Syria or Venezuela.

But why bandits? Is it really impossible ... It is impossible. Because the territory of Russia is secured, contained in unity only by bandits. Peaceful people would have long ago divided the country into independent pieces, and would have lived like in Norway or Finland. And we would go on trips to Altai or Sakhalin. In small territories, power is controlled by the people.

On small x territories are not possible Medvedev and Peskov and Soloviev.

Figure 67.

The idiom "bomb Voronezh" was not created by journalists by accident. Truths fly in the air and someone is caught.

Smart and fools.

(We do not remember the source). Highly developed people use more patriotism instead of nationalism, unification instead of cooperation, courage instead of arrogance, caution instead of cowardice, modesty instead of shame, friendship instead of dependence, tact instead of sycophancy, love instead of adoration, perseverance instead of stubbornness, responsibility instead of duties, honesty instead of hypocrisy, development instead of repetitions, equivalent exchange instead of benefits, criticism instead of insult, persuasion instead of fanaticism, pride instead of arrogance, naturalness instead of imitation, optimality instead of excessiveness, competition instead of war, disgust instead of hatred, strictness instead of rudeness, passion instead of excitement, choice instead of randomness, imagination instead of

fantasy , thrift instead of greed, rest instead of debauchery,
elevation instead of procreation, etc.

The underdeveloped townsfolk do the opposite.

Siberia is burning, well, to hell with it. The main thing is Siberia is ours. Crimea is dying of thirst, there is no water. Well, to hell with him. The main thing is our Crimea. Baikal is poured with waste, the water becomes polluted. Well, to hell with him, with Baikal. The main thing is our Baikal. Muscovites and residents of St. Petersburg go to demonstrations. The people are unhappy. Well, to hell with them, and we will take the parades. The main thing is that the power is ours. The power is Muscovite. Russia is an empire. And the metropolis - Muscovy, with the ugro-chud at the head. With haplogroup N, which scientists like Klyosov, for unknown reasons, attributed to the Slavs.

Scientific discussion in Europe:

- Gentlemen, I think so and so.
- And I think so and so ...
- I disagree with the opinion of my opponents and think so and so ...

Scientific discussion in Russia:

- Comrades, I think so and so ...
- Yes, piz * dit is good, you are an asshole and you don't understand a damn thing ...
- “You're both assholes, you don't know a damn thing ...”
- Yes, I'll clean up the f * ck for you now for such words ...
- Further on the soundtrack there are spanks on the f * ball ...

GRC in Russia. 1) Cover concrete with putty before painting. 2) Notches around the edge of the plastic cutting board. They collect germs and dirt. 3) Russian toilet bowls, with the accumulation of feces. 4) Russian apartment layout, toilet next to the kitchen. 5) Russian canisters. The bumps below are like legs. However, in order to reduce the cost, the bumps began to be stamped even at the stage of the shells. As a result, when the lump was wiped, a hole was obtained and the canister was out of order. 6) Russian

plastic and products from it. Everything fell apart after three days. I have a time timer. The handle fell apart.

List of stupid initiatives for the authorities.

(© 15.08.2014 on Maxpark as "Thinker Aloud").

This list must be posted in the Duma. First of all, it is necessary to acquaint young deputies with this list. This list must be addressed when considering all initiatives from the Duma and the Government. And if there is an initiative on this in the list, then either the issue is not immediately considered, or this list is corrected by the constitutional majority of the Duma.

Members of the State Duma and the Government to learn the list by heart and pass off tests according to the USE system (in order to avoid corruption), those who did not pass are automatically excluded from the Duma and the Government.

Consider the following discussions as evasion of public duties:

01. Renaming of cities, streets, squares, lanes, etc. Like: to return the historical name of the Crimea - Tavrida. Or Taman to return the historical name Tmutarakan. Or the return of the historical names that they had before 1917 (before 862, before 1613, before 1991, before 2000).

02. Renaming of militias, abbreviations, etc. to new terms and abbreviations. Like the POLICE in the POLICE, ISIS in DAISH, AIDS in HIV, the traffic police in the traffic police, the Ministry of Internal Affairs in the MOOP, the KGB in the FSB, CORONAVIRUS in COVID-19, and so on.

03. A sudden and unjustified ardent desire of the authorities to remake the military uniform (or the police uniform, or the uniform of other civil servants) into a European, gay, Yudashkin or other way. The uniform should be its own, folk, traditional, recognizable, battle-tested, familiar, stable.

04. Dismantling of monuments and obscene erection of new monuments. We remember that there is no culture of caring for monuments in our country. All of them are craped with pigeons

and absolutely do not please anyone with their appearance. And about the monuments from Tsereteli, a special conversation ...

05. Privatization of industries and enterprises that are profitable for the people and the state, technologically uncomplicated, and efficiently working. In particular: alcohol, tobacco products, oil, gas, coal, any raw materials, metals, wood.

06. Combating alcoholism, smoking and drug addiction by simply banning drinking, smoking and taking drugs in any time or space. Initiative to introduce the Day of Sobriety in Russia. Or introduce a drug-free day.

06-a. Shifting the age of selling alcohol to young people either to the area of small ages or to the area of older ages.

06-b. Introduction or postponement of the deadline for the sale of alcohol.

07. A sudden and unjustified ardent desire to help those in need and at war in other countries. And also to dictators and tyrants. There are enough of our own.

08. Suddenly surging ardent desire among deputies and other officials to hold global sports and other events in the country. Somehow: Olympiads, Universiades, pseudoscientific forums, football championships (which we do not know how to play and will never learn).

09. Suddenly surging ardent desire among deputies and other officials to carry out collectivization of agriculture. Or, conversely, the general privatization of all farms and cultivated land.

10. An ardent desire that suddenly surged among the deputies and other officials to give another state a sea shelf, or a piece of territory, or an island, or to change the border. The strictest prohibition to do this secretly from the people and the media.

11. The ardent desire suddenly surged among the deputies and other officials to allow direct competition between domestic and imported products. Especially in strategic industries: automobiles, shipbuilding, aviation. We must learn to do our own thing.

12. An ardent desire suddenly surged among deputies and other officials to join various international trade, economic and political organizations (such as the WTO, the EU and the like), in which we are deliberately assigned the role of a statistician, an advisory voice and a provider of high salaries for the members of this organization. Naturally at a loss to their economy.

13. The ardent desire that suddenly surged through the deputies and other officials to quickly annex a piece of a foreign country and at the same time, as if nothing had happened, try to maintain friendly relations with this country. Or either. Either friendship or territory. If the territory, then this means complete strategic and tactical readiness for war.

14. Transition to summer-winter time alternation. Winter is introduced and that's it. Checked. We were convinced. We felt it. There is no savings. There are inconveniences. Finally. Forever and ever.

15. An ardent desire that suddenly surged among the deputies and other officials either to fight religion, or, on the contrary, to help the church. Or to build churches on the territories of scientific institutes. Everything must remain stable and the same. The church is separated from the state. The church is separated from science and scientific institutions. The state does not take away buildings and territories from the church. Priests do not consecrate rockets, planes and ships.

16. Do not touch the exam under any pretext! The person who passed the exam really knows something. And those who do not know anything at all pass through the exams to the teacher.

17. Suddenly surging ardent desire among the deputies and other officials to solve the fooda problem or any other problem by simple means. By a simple turn of the rivers; massive construction of dams; the massive construction of hydroelectric power plants, windmills and power generators; or planting all territories with corn; the destruction of all sparrows; construction of steel furnaces in each yard; or a complete switch to GMOs, soy, palm oil,

glutamate, or other similar drastic and adventurous measures. A separate list is needed.

18. Suddenly surging ardent desire among deputies and other officials to appease this or that territorial unit and introduce national, award or other signs (such as the Order of Lenin Leningrad Region) in the name of the territory. All territorial units are equal.

19. Point development of cities with high-rise buildings without accompanying parking spaces. Generally development of high-rise buildings.

20. Privatization of medicine (within the framework of mass medicine) and education (within the framework of fundamental education).

21. Suddenly surging initiative of the authorities to solve the problem of inflation by delaying the payment of wages.

22. Suddenly surging desire of deputies and other officials to OPTIMIZE (that is, to stop) education, medicine or anything else.

23. A sudden surging desire to fight the orphanhood of children by simply reducing the number of orphanages and boarding schools.

24. A sudden rush of desire to change the training programs BEFORE the development and testing of new programs at all costs.

25. Suddenly surging ardent desire of deputies and other officials to amend the Constitution. Especially in terms of extending the term of the next "father of the nation" in power.

26. A sudden desire among deputies and other officials to raise the retirement age or abolish pensions altogether.

27. Fight against incandescent bulbs, without creating a recycling system and producing energy-saving lamps.

28. The introduction of Sharia (Orthodox, Catholic, Baptist, harekrishnyu) councils under the government of the State Bank, other state institutions.

29. Increase the percentage of taxes in order to increase the collection of taxes.

30. Fight against the tyranny of employers by punishing workers. Type: exclusion from the work record of an employee of the time of work for this employer.
31. An obsessive desire to prohibit and censor something. In the movies, or in literature, or on TV, or on the Internet.
32. Change the flag back to the Soviet one. Return the red flag to Russia.
33. Return of the monument to Dzerzhinsky again to Lubyanskaya square. Or replacing it with a monument to Alyonka.
34. Return the historic white color to the Moscow Kremlin.
35. Transfer of capitals to another city. Move the capital to Kazan. (Novosibirsk, etc.). Transfer of the capital of Russia to Sevastopol.
36. To fine men for abortions of their partners.
37. Punishments for parasites. Fight against parasitism, or vice versa, complete resolution of parasitism.
38. Have faith in social media
39. Make forecasts about the ruble exchange rate for six months, a year or more ahead.
40. Make 5- and 10-year plans.
41. Allow - prohibit foreign words.
42. Cancellation of sobering-up centers - re-introduction of sobering-up centers.
43. Prohibit (allow) psychics and clairvoyants
44. Transferring the day of knowledge from September 1 to a later (or earlier) date.
45. Prohibit (allow) psychics and clairvoyants
46. Reform the State Duma in the German manner.
47. Return beer to stadiums. Or, on the contrary, prohibit.
48. Allow / prohibit prostitution.
49. Introduce fines for insulting disaster victims and other deceased.
50. Parents' fine for lack of spiritual upbringing of children.
51. A circus without animals!
52. Prohibit - Permit abortion.

53. Forbid - allow the burqa.
54. Walking schoolchildren in uniform or without.
55. Hand over money to teachers or not hand over money.
56. Expelled from the only housing or not expelled.
57. Pay or not pay oxygen tax.
58. Increase (decrease) the minimum age for marriage.
59. Raise the minimum cost of cigarettes to 178 rubles per pack.
60. To punish or not to punish for dealing with prostitutes.
61. Rename "president" to "supreme ruler". The Liberal Democratic Party proposes a royal anthem, an imperial flag and a Supreme Ruler. It was back in 2017 or earlier.
62. Transition to the Latin alphabet.
63. Colonize Mars or the Moon.
64. Rewrite the text of the anthem of Russia. Or maybe music.
65. To unite Lipetsk, Voronezh and Ryazan regions.

Note. It is necessary to create a page on the Internet and make stupid proposals to make it easier for the deputies to work, he went to the site and Oops !!! There are so many of them, you don't even need to strain your brain

The struggle between scientists and scientific administration.

An eternal natural contradiction: between those who produce knowledge and those who use this knowledge for selfish purposes. This struggle has many manifestations. Naturally, people who use the results of science and technology try to appropriate most of the profits to themselves. And the whole community of real scientists is trying with all its might to prevent this. If there were no laws restricting business rights, then business would constantly steal new discoveries and technological developments. And then scientists would have no incentive to do science. Therefore, various types of patenting have been invented for everything that can be profitable.

However, there is no sharp line between profitable science and unprofitable science. In human society, there are no sharp boundaries at all. There is no sharp line between pure scientists and scientific administrators. Scientists can take part in administration. And administrators can participate in scientific research. There is no sharp line between business and science. Everything is very relative. Investment of capital can accelerate the development of some direction in science. And the lack of funding can slow down the most promising areas of science.

Likewise, a branch of science that is completely useless from a business point of view may suddenly start to generate large profits. Likewise, lucrative areas of science and technology are depleted over time and cease to be profitable.

Examples of the struggle between scientists and administration are: various types of diplomas, dissertations, scientific titles and degrees, patents, copyright certificates, and other labels. All these documents were created as if on the border separating scientists and administration. After all, this border does not have the shape of a smooth plane. This border is shaped like the interpenetrating roots of a tree or the intertwined tentacles of two fighting octopuses. And all the listed dissertations and certificates, on the one hand, were created by the work of a scientist, and on the other hand, they are approved and taken into account by the administration when evaluating the work of a scientist.

As in all spheres of human society, deception and cunning play an important role in the relationship between the administration and scientists. How is it shown? On the part of scientists, this is the invention of false directions of research that require large budgetary investments. For example, the threat of space aliens can be made to pay for a lot of useless space exploration. And the legend of the mysterious boson can be made to pay for the construction of huge colliders. On the other hand, administrators do not sit idly by either. They also come up with ways to deceive scientists. Administrators are constantly infiltrating the scientific community. To be able to keep abreast of all new ideas.

Administrators do not have any weight and authority among real scientists, do not have any discoveries and valuable developments. But they come up with fetishes such as peer review, academic degree, number of publications, number of links per publication (you tell me - I give you), and all kinds of ratings. Scientists are often led by these ratings and titles. And they share with such crooks.

Of course, the whole problem lies in the division of the money allocated for science. Here is a real scientist, he is immersed in science, and every day he brings something useful for the laboratory, for the enterprise. Even through everyday conversations, contacts, advice, tips. But the administrator, he has a fake dissertation, fake publications, fake links (you tell me - I give you). Who should be paid a big salary? Unfortunately, more often than not, the administrator receives a large salary.

So the administrators of the academia.edu site have come up with their own fetishes. New "AutorRank" icon. What for? Well, after all, it is quite obvious that if a monetary equivalent appears in this badge, the crooks will quickly come to an agreement and arrange the procedure "you to me - I to you." And they will have a high "AutorRank". Why step on the same rake?

I recently visited academia.edu. And I see that one user N "recommended" my article. Naturally, I am obliged to "recommended" his article. How else? Otherwise, it will no longer be "recommended" my articles. Again, it turns out "you to me - I to you."

I think all these inventions are not very productive. There should be no standards and rules at all for any actions other than free common sense.

The only useful procedure is secret ballot. There shouldn't be any messages that someone "recommended" your article. In real science, everything must be secret. All votes are secret. All reviews are as secret as possible, and it is better to cancel them. All "recommended" are secret. Reviewers should not be familiar with the authors of the articles. And the procedure for linking to

articles should be removed from science altogether. Same chronological and author links between publications should be established after publication. And if there is a pure theft of ideas, then such publications should be canceled. But long lists of links are completely pointless. Because uh then repetition of the same list. By the way, recently one author on this site offered a list of several pages for all topics in one narrow section of physics. These are the grotesque forms that stupidity takes on.

The system of dissertations is outright fascism.

June 11, 2017 9:21 pm

What is fascism? This is when a certain group of people, selected for some reason, is declared a kind of higher caste. With a variety of consequences from such a choice, privileges, up to massive clean-ups.

In what way is this higher caste distinguished, defined? There are different ways. To the extent that they are understandable to the population. For example, today's Russian lawlessness in society was created by the nouveau riche caste, unjustly enriched by privatization. This is something like entrepreneurial and banking fascism. In Germany, there was everyday fascism, when they declared the Germanic race to be the highest, and the Jewish one to be the lowest, and they carried out sweeps.

Thus, the main feature of fascism is the allocation of a higher caste.

How fascism was realized in Russian science. A lot of what people do in the beginning may have had good intentions. But in the end, the result is different. as in the well-known saying about good intentions. There is a well-known anecdote that for some reason Kalashnikov assault rifles are always obtained from spare parts of the Podolsk sewing machine plant. Perhaps this is connected with the fact that the system of dissertations, conceived to improve Soviet science, led only to fascism and nothing else. What is a PhD, PhD, PhD student? Did they really do something in science? Have you solved the problem? Have you achieved

economic benefits? - Not at all. This is just a dedicated caste of people who, by hook or by crook, defended (or bought, or wrote off) a thesis. In this case, a lie is required about the economic effect, about the most important problem, about the solution of the most difficult problem. But in reality, these are connections, authority of the camp type, the ability to hurt opponents and rivals.

Thus, a pseudo-scientific caste is created, with formalized labels - scientific degrees, crusts. And this caste captures all magazines, sites, forums, promising and well-funded areas. And all other "simple" scientists are kept in a state of slavery. Or work, create the result and give it to your boss. Or goodbye.

Thus, an advanced degree does not in any way reflect a person's contribution to science. It's just a shortcut to belonging to a particular caste. The label of the masters of life. The rest are slaves. It's like belonging to a medieval order.

Intellectual slavery in Russia.

1) The old saying: Victory has 100 mothers, defeat is always an orphan. This is fully applied in the administration of science. Only her is rewarded, and no one is responsible for the defeat.

2) All science is built in the form of an administrative structure. Directors - bosses - are overwhelmed. This structure is combined with scientific degrees. And so that without participating in the structure, you will never get a scientific degree. The structure is primary. And all bonuses, awards and increased salaries are received only by members of the administrative structure.

3) And why in cinema there are awards not only for directors, but also for actors, screenwriters, cameramen, for the best supporting role, for the best leading role, for the music for a film, and so on.

And the main thing is that the director of Mosfilm is not given film awards. Hollywood studio directors are not given film awards. Film promotion managers and producers are not given film awards.

But in Russian science there are awards only for members of the Russian Academy of Sciences, who, in principle, have a distant relationship to science. These are all administrative workers. Managers. Bosses, supervisors, directors ... Huh? Here's a question for real scientists. Will we ever free ourselves from the slavery of a pseudo-scientific administration?

4) Take the popular stage. Who do we know? We know the performers. They take all the popularity for themselves. And hard workers composers and hard workers poets remain in the shadows. This is how our society works. That's in science. those who voice science play a much larger, overwhelming role than those who drive this science.

5) To cast a voice in the flock - it is necessary to have strength and courage. And it is not at all necessary to have a mind. It is courageous people who give their voice. And they are in charge of everything. And in science it is not clear why and why this strength and courage to give voice and the defense of dissertations have been combined. Therefore, if you are smart, but are afraid to voice, then sit without a dissertation.

6) Distribution of premiums. Same. The administration takes the lion's share.

Since ancient times, Russia has adopted a camp hierarchy in society. That is, not in intelligence, but in aggressiveness, in the ability to hurt another. And no matter how smart people came up with, and dissertations were invented, all sorts of degrees, titles, shoulder straps, it was not possible to save the smart from slavery before the bandits in Russia in any way. In America, this problem was solved by His Highness Colt. Which once and for all destroyed the criminal hierarchy and made all people equal. And in Russia, as in the old days, high officials used to drive "sixes", and today they drive "Mercedes" and have six or more deputies.

**How the Physicotechnical Institute was organized.
Groups, elders.**

I was somewhat surprised by the student structure of Phystech. All the elders in the groups were either not Slavs, or similar to the Slavs, but with the surnames -IN. All the elders were absolute amateurs in the field of physics and mathematics, and by the end of their studies they had not learned how to take derivatives and integrals. They moved mainly along the line of high social activity, carried out organizational work for various demonstrations and the like. Community service was rated very highly and even if you did not keep up with your studies, then as an activist you always received a scholarship. The elders were also the commanders of student construction brigades during the summer holidays. That is, back in those days, the administrative resource was charged into science. Social activists were necessarily included as co-authors in scientific works. This is how the party organizer of one research institute Alferov became a Nobel laureate when the real authors of the work on LEDs died. Ultimately, the graduates from the student "headmen" became leaders of science and took all the glory from scientific achievements. Like Korolev or Kurchatov.

Optional: article on the sports system.

Background.

Around 1984, the author invented a sports mathematical model that makes it possible to objectively evaluate the results of tournaments in which some meetings (matches) were missed. Its essence is outlined below. During 1986-1987, the author sent her to several leading sports bodies. Various federations and institutions. In particular, to the Football Federation, from where the answer was preserved.

ГОСКОМСПОРТ С

This letter clearly illustrates how stupid and impenetrable the officials of the USSR were. How stupid and impenetrable is the system of reviews when a random rogue official can hack down the best development.

I remember there were answers from somewhere else, but they were lost. They stayed in the desk at work, in the laboratory where he worked until 1989, and were probably thrown out after being fired. By the way, both the article and the correspondence were conducted at work. Yes, and you cannot send an article anywhere on your own behalf and without the signature of the director of the research institute.

This material at the very beginning of 1988 was also sent by mail to the journal "Theory and Practice of Physical Culture". Six months later, worried about the lack of an answer, the author went to the editorial office and was surprised to learn that the article had disappeared. It is not in the editorial office. Although there was a notification of receipt. The author immediately brought (in person) a second copy of the article, and at the end of 1988 it was successfully printed.

In the meantime, and this is one of the reasons why the author did not begin to popularize his invention, in parallel, one subject appeared (forgot his name), who began to bring in the editorial

offices of the central newspapers some "Eleks ratings" of all kinds of group tournaments. These "Eleks ratings" were obviously calculated using the system described here. But since the first submission of the article to the journal disappeared, the responses of other organizations were not preserved, and the publication took place only at the end of 1988, there is no strict legal evidence of the author's priority. Eleks ratings began to appear in mid-1988. The author's personal opinion is as follows: there was an attempt to steal this system and priority over it. It is very likely that the article, first sent to the magazine, ended up in the hands of this "inventor" of the "Eleks rating". Maybe he was a reviewer for a magazine. A closer look shows a certain extraordinary system and its prospects. The competitor fell for it. But apparently he was afraid of exposure, so his "ratings" gradually died out. Then the 90s began, reforms, the country plunged into chaos, there was no time for sports.

Here is this article from the magazine.

The system for evaluating the results of multi-stage competitions

An unfinished sports tournament is understood as a tournament consisting of separate meetings (games, fights) of its participants, in which, either according to the original plan or for random reasons, there were pairs of participants who did not meet with each other. It can be a tournament in team game sports (football, hockey, etc.) or in individual sports (fencing, tennis, wrestling, chess, etc.), which was held according to the "each with each" system, but one or a group of participants was late by the beginning of the tournament or dropped out before its end (due to illness, injury, etc.). As a result, several participants (or all of them at once) had an unequal number of meetings, and the existing practice of summing points, even if divided by the number of meetings, does not allow distributing the places of participants in this tournament due to the fact that they had different rivals.

Initially, it was only intended to develop a reliable and reasonable way of allocating places in such tournaments. However, the development turned out to be so successful, simple and internally perfect that its capabilities simply defy observation. In particular, the new system has the following advantages:

1. Its application makes it possible to significantly improve such systems of conducting tournaments as the Swiss and "each with each", including unambiguously resolving situations when several opponents have the same number of points. It becomes possible to hold championships according to a system similar to the Swiss one, when meetings of rivals of different classes are practically excluded (and now there are up to 50% of them in championships). At the same time, due to the different price of meetings between leaders and outsiders, adopted in the new system, the "swing" existing now in the Swiss system with an unexpected jump of the new leader due to the points scored in meetings with outsiders is excluded. The need to divide teams or athletes into leagues (highest, first, etc.) disappears. This means that any athlete or team can fight for a high place, there is no need to wait a year to move to the next league (to then come back ...). Can grow throughout the season.

2. It becomes possible to hold shortened tournaments with any number of participants with a previously known schedule of meetings, without elimination (as it happens in the cup system) and almost complete absence of an element of randomness, which (in the aggregate) is impossible when using any traditional tournament systems.

3. The concept "class" of a team or athlete, which is widely used among athletes, fans, commentators, journalists and specialists, acquires a specific meaning.

4. The frequently used rule is clarified: in case of equality of points, the winner in the head-to-head meeting will take the higher place. It turns out that this is true for leaders, but the opposite should be true for outsiders.

5. The use of the new interpretation system allows in a new way, more clearly to illustrate the course of the struggle in the championships, since the usual standings, especially with unequal numbers of meetings, does not reflect the real balance of forces of the participants.

6. A positive impact on the sporting results of tournaments is not excluded. Such concepts as "fixed" matches, "away model", "draw limit" lose their meaning. If the commission determines the "negotiated" result of the meeting, then this meeting can be simply canceled without any replay.

7. The tension in the internal calendar due to international meetings is relieved, since there is no need to provide for "windows" in the championship. During this time, several meetings are simply skipped without prejudice to all participants.

8. Country Cups can be improved.

It turns out that all existing tournament systems are partial, simplified versions of the tournament model that is used in the new interpretation system. Finally, it is known that the traditionally used systems for holding tournaments and systems for interpreting their results, created many centuries ago, are currently experiencing a deep crisis. Suffice it to recall the post-match penalties or toss, the fatal influence of the referees, the sacrifices of the "draw limit", etc. Therefore, one must not stand still, and, perhaps, the new system will thus turn out to be an urgently necessary step forward.

The new system of interpretation is based on the relatively simple mathematical model of the tournament, which, in turn, is built on the intuitive, natural, unsuspecting postulates set out below that are valid for any kind of sport. Further, special mathematical terms are underlined when first used, they are few, and they are generally available.

Postulate 1. The outcome of a meeting of any two rivals has, to a certain extent, a probabilistic nature. In this case, of course, the probability of winning against a stronger opponent is higher.

Postulate 2. For each participant of the tournament m ($m = 1, 2, \dots, M$, M - the total number of participants) there is a certain numerical value K_m , called the "class of the participant". It is assumed that this value is constant during the entire duration of the tournament, and different results of the meetings are explained by the influence of random factors. The meaning of this value is close (but does not coincide) to the concept of "rating" (which also presupposes the existence of a certain "initial" rating and a long period of observation of the participant) and lies in the fact that, in principle, in a certain series of meetings of two rivals, m and n their victories (if a draw is possible, then it is considered a half victory) are treated as $K_m:K_n$. The K_m values of each participant are meaningful only in comparison with the K_n values of other participants, that is, they are of a relative nature. Therefore, they depend either on an arbitrary task of K_m of one of the participants, or on the task of the sum of K_m of all participants.

Postulate 3. The K_m values are finally determined only after the tournament based on the results of all the meetings held. At the same time, it is not necessary for everyone to have time to play with everyone. The number of meetings for all participants may be different, but quite large (statistically significant). The places in the tournament are allocated in accordance with the K_m values. K_m values can also be determined at any time during the course of the tournament to illustrate the course of the struggle. Of course, at the initial stage, they still do not accurately reflect the balance of forces and change during the course of the tournament.

Postulate 4. As a result of each meeting, the opponents m and n , firstly, receive the coefficients a_{nm} and a_{mn} against each other. For team game sports, this can be the notorious 2 - in case of victory, 1 - in case of a draw, and 0 - in case of defeat. True, a differentiated odds distribution system would be more promising: 4: 0 - in case of a big win, 3: 1 - in case of a difficult win, and 2: 2 - in case of a draw. Major is defined differently for each sport. For individual events, the odds can be adopted by others, it is only

important that the sum of the odds per match is constant for all matches of the tournament.

Secondly, each participant m gains a certain number of points equal to $a_{nm} \cdot \{K_m + K_n\}$, which, however, like K_m themselves, is not known exactly until the end of the tournament.

Nevertheless, it is known that each participant in each meeting is interested in gaining the maximum possible coefficient against an opponent. This will be seen from what follows. Thus, it is assumed that the price of one meeting in glasses is not constant, as is the case now, but depends on the class of opponents. This is true. You cannot evaluate matches between leaders and outsiders in the same way.

From the formulated postulates, the system for interpreting the results of the tournament, or, in other words, the method for determining the values of K_m , naturally follows.

In accordance with the mathematical theory and the formulated postulates, regardless of the adopted system of distribution of coefficients in individual matches, the mathematical expectation of the number of points scored by each participant in one match does not depend on the opponent and is equal (with the traditional sum of coefficients equal to 2):

$$A^1_m = 2 \cdot K_m.$$

This follows from the interpretation of the meaning of the K_m value given in postulate 2. Accordingly, after the n games have been played, the expected number of points for the m -th participant is equal to:

$$A^n_m = 2 \cdot n \cdot K_m.$$

In the general case, the number of games played by each participant is different, therefore, in what follows, these values are denoted by p_m .

In practice, however, an element of randomness is triggered, and the participant actually scores B_{nm} points:

$$B_{nm} = a_{nm}^1 \cdot (K_m + K_1) + \dots + a_{nm}^M$$

where the coefficients a_{nm} are equal to 0, if the m -th participant was defeated or did not meet with these participants; 1 - if the meeting ended in a draw; and 2 if won. (This is a 2-point variation again).

Now, given that after a sufficient number of meetings, the participant's random successes and failures are mutually compensated, we can equate the values of A and B in formulas (3) and (2). This gives a system of M equations with M unknowns, necessary to determine the values of K_m :

$$2 \cdot H_{nm} \cdot K_m = a_{nm}^1 \cdot (K_m + K_1) + \dots + a_{nm}^M$$

It is easy to verify that the sum of all equations in system (4) gives an identity. This means that any one equation from (4) can be omitted, since it is a consequence of all the others. Instead, a normalization equation is added to the system, which arbitrarily specifies either one of the K_m or the sum of all K_m , for example:

$$K_1 + K_2 + \dots + K_M = 100$$

In this case, the "middle class" of the participants is assumed to be 100 and the class of each participant will be expressed in% of their middle class.

System (4) without any one equation and additionally with equation (5) and determines all the values of K_m . This is a linear system and can be easily solved even on a manual keyboard typewriter. You can also use a computer.

That's the whole model and system of interpretation.

Calculation example.

For example, the completed tournament of the 10 strongest hockey teams in two circles at the final stage of the USSR championship of the 1985/86 season is taken. Below is the final table of the tournament results.

The results are given not in goals scored, but in scored odds against each other (or in points according to the old system).

	1	2	3	4	5	6	7	8
1. ЦСКА		4:0	3:1	2:2	2:2	4:0	3:1	4
2. Динамо М.	0:4		2:2	2:2	2:2	2:2	3:1	4
3. Спартак	1:3	2:2		2:2	2:2	4:0	3:1	1
4. Сокол	2:2	2:2	2:2		4:0	2:2	1:3	2
5. Динамо Р.	2:2	2:2	2:2	0:4		3:1	2:2	2
6. СКА Л.	0:4	2:2	0:4	2:2	1:3		4:0	3
7. Искра-122	1:3	1:3	1:3	2:1	2:2	0:4		4

The column on the far right shows the command class calculated on the Iskra-122 manual typewriter. It took about 3 hours to solve the system.

The system of equations for determining the K_m values has the form:

$$36 \cdot K_1 = 4 \cdot (K_1 + K_2) + 3 \cdot (K_1 + K_3) +$$

$$26 \cdot K_2 = 0 \cdot (K_1 + K_2) + 2 \cdot (K_1 + K_3) +$$

.....

An example is very clear in that some teams ("Spartak", "Sokol"), which gave battle to the leaders, turned out to be higher in class, despite the fact that they scored an equal or even less number of points than their rivals. In addition, the difference in class between CSKA, the group of "middle peasants" and the group of those who calmed down, breaking into the top ten, is indicative. If we return to the final table, then in the upper right corner of it (or in the lower left) there are the previously known 4: 0 results. Was it worth "driving" CSKA to Gorky or Chelyabinsk?

In conclusion, a few comments on the new system of interpretation. They partly explain the advantages of the new system listed at the beginning, which are not entirely obvious.

1. In team game sports, the concept of "rating", similar to that used in chess, is not applicable. This is due to the fact that there is no such stability as in individual species. The line-ups of teams, coaches change, players get injured, the psychological climate in the team changes, etc. Therefore, the new concept of "class", acting only during one tournament, is more acceptable for team events. In contrast to rating, the concept of "class" can be extended to individual sports, as a result of which there is no need to assign an "initial" rating, as is done in tennis and chess.

2. The use of the new system, obviously, is possible only when the participants held meetings according to a "hooked" scheme, i.e. the tournament should not break up into separate independent sub-tournaments and the engagement must be good enough. Each participant must hold at least 3 - 4 meetings so that the results shown to them can be considered not random.

3. The most suitable rally system for the new interpretation system is Swiss. The new system automatically takes into account that all participants differ in class. This makes the Swiss system fairer and more perfect.

It is in the Swiss system, in its current version, used in chess, that the unequal price of all meetings is confirmed. True, only in the

case when two or more participants scored equal points. Why not introduce this and in the general case of different numbers of points?

4. With a sufficiently large number of participants, the probability of the coincidence of classes in two of them (fractional numbers) is practically zero. Therefore, there is no need to use additional criteria for the allocation of seats.

5. It is unlikely that the "away model" becomes applicable, since, firstly, it is not known until the end of the tournament who is weak, and secondly, you cannot score many points with a weak one, you have to score them with strong ones. Fixed games are also excluded, since until the end of the tournament it is not known who is in what place finally. Who wants to take risks?

Perhaps, for these reasons, a draw limit will not be needed either. 6. The described model can be applied both independently and in combination at the last stage with the cup, when prizes are played among the four (or eight) best according to the system with elimination.

7. It is easy to see that the current practice of summing up points in tournaments in the light of the new system is the use of an assumption, not very logical, that the class of all participants is the same and that everything is decided by chance. This applies to both the Swiss and the one-to-one system. The situation is exactly the opposite in the cup system. Here the element of chance is completely neglected. Thus, the new system includes all existing ("degenerate") options.

8. Finally, one can make sure - and this follows from the very logic of the system that K_m is always positive, and the change in K_m after each round or game is positive if and only if the participant did not lose to a stronger opponent.

The application of the system in each specific tournament should be thoroughly investigated. Only a general description is given here.

A modern addition.

If we allow the presence in the management of sports of at least a small number of scientifically literate people (not counting such as the candidate of sciences Klitschko), then you can save a lot of effort and money, as well as eliminate a significant part of the injustices and uncertainties that arise in tournaments. Another hockey championship ended the other day. Let's ask a few questions.

- Why (and this is repeated in almost every championship) it was twice to meet with the same team in the same championship?
- Why is there no rest before the most important match? The ice hockey sports competition was turned into a competition based on the methods of rapid recovery of athletes within a day. It would be interesting to watch the final of the FIFA World Cup a day after the semifinals. Football players would crawl on all fours there after the ball and roll it with their noses.
- Why is there a preliminary stage in groups in general? What to fight for? For the illusory right to have a weaker opponent in qualifying matches? So anyway, after the first match, you will have to play with all the strong. And then there is a simple lottery.

This is a completely stupid system. the championship. Defaming the whole hockey world in general.

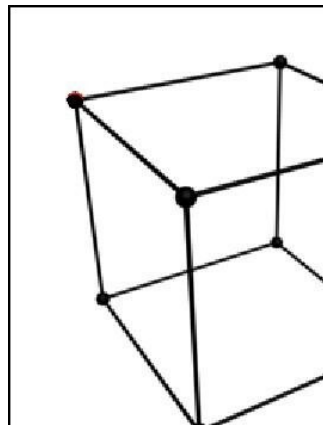

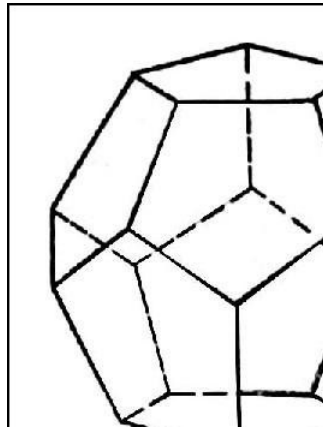

If we recall the history of championships, then according to the system "each with each" the USSR has always won. Even with one or two defeats. Because other teams rescued, which defeated our offenders. It is for this reason that the International Ice Hockey Federation, under pressure from the Canadians, introduced a lottery system, where everything is decided by an accidentally scored goal.

THE CHAMPIONSHIP PLAYING SYSTEM SHOULD BE CHANGED.

Prospects for the application of the new system.
How championships should be run.

The new system allows very convincingly, taking into account the strength of the rivals, to assess the results of "incomplete" tournaments.

Here's how qualifiers can be organized for different numbers of teams in a championship. There are only two examples here, in fact there are infinitely many systems. At the end, a final between the two best is possible. But it's better not to have any ending. Then each meeting of the tournament will be of interest both for athletes and spectators. The attendance of matches will also increase.

Which is more important: the census or the elections?

What is more important: the population census or the Duma or presidential elections?

There are two things: the population census, relatively speaking, once every 5-10 years. And elections to the Duma or the presidency, also once every 5-10 years. Plus or minus. Let's compare the importance of these procedures. The elections are very important. They regulate our life, our power. Determine the direction of development. And the census? Yes, nonsense. The meaning of the census is purely arbitrary. Everyone already knows that the population is practically unchanged. That is, **IN IMPORTANCE, THE ELECTIONS ARE MUCH MORE IMPORTANT** than the **CENSUS**. Now let's compare how the elections and the census are conducted. Let's compare costs and benefits. The census that no one needs is being carried out with colossal fanfare and scope. Millions of young people run around 100% of apartments and houses and enter information on 100% of residents. Colossal expenditures of energy and money. But at the same time, the residents themselves do not have to go anywhere. They live in peace for themselves. Residents do not need to strain. And at the same time, the highest accuracy in estimating the number of inhabitants. All numbers are close to 100%. **CENSUS RESULTS ARE VERY ACCURATE AND VERY REAL**. How are such important elections held? People should wake up, wash themselves (it is very difficult for old people) and walk someone close and someone a kilometer to the polling station. There is a commission sitting there, wiping their asses. No more than 30% will go to the polls. Just who has nothing to do. And plus stuffing. Plus counting fraud. Plus the manipulation of candidates. Plus Pamfilov or Churov. There is no need to talk about any accuracy in determining the best candidate. **ELECTION RESULTS ARE VERY INACCURATE AND SUBJECT TO Falsification**. If we compare the costs of conducting a census and elections, they will turn out to be about the same. Millions of census runners and millions of those sitting on election commissions will receive

roughly the same amount of money. Well, at least in order of magnitude. BUDGET COSTS AND ELECTIONS ARE ABOUT THE SAME. And if you also compare the strain of the population for the census and for elections, then there is a clear preponderance of the census. TENSION OF THE POPULATION AT ZERO CENSUS. AND VERY SIGNIFICANT IN THE ELECTION. Conclusions. They are obvious. Compared to the census procedure, the elections do not stand up to scrutiny. Moreover. It is necessary to abolish the current election commissions, collection of signatures and other crap altogether. And to hold elections according to the population census system, with runners in all apartments.

The main troubles of Russia.

No, these are not "three Ds", they are not fools, not roads, not democrats. These are three troubles that decent people have been writing about for a long time. But they write about them one by one, in different contexts, so readers do not focus on these troubles. And in addition, every time we are given killer examples of Canada, or Finland, in which supposedly all conditions are the same, but they live much better. No, guys, neither Canada, nor Finland, nor Sweden, nor China have such a powerful set of problems that the Russian people have to discuss.

I have repeatedly cited an example from chess in various publications and comments. Here is a game between two grandmasters. Complex, multi-figured position. All rivals' brains are strained to the limit. Let's stop time for a few minutes. Let the chess players freeze. Let them rest. Take and move one pawn or one piece per square. No, not somewhere far away on the edge, but in the thick of things. And we will offer the opponents to continue the game. How will they behave? Here is the one who should walk, will he walk the way he wanted to walk before our intervention? - Of course, he will not go as he wanted earlier. Both grandmasters will have to completely reconsider the whole situation, completely recalculate all variations, all possible

continuations. Because all the previous miscalculations, options, they become inapplicable.

What is happening in our politics? We broke the wood, canceled all the iron curtains, canceled all the achievements of the times of socialism, canceled all the protecting and restraining laws and ... we continue to live according to the same socialist desires and aspirations. Let them withdraw capital to offshore companies, let them mercilessly exploit migrant workers, let them mercilessly breed corruption, let them pump out raw materials, gas, oil and deduct 6-7 percent of all proceeds to the budget? !!! This is wildness. But this is so, because everything that was holding back was canceled. They abolished the Leader who took care of the whole country, abolished the Secretary General, who could intervene in destructive processes. We canceled everything. What for? For what? After all, theoretically, even after the most insignificant change in the political structure, in legislation, in the system, all laws must be revised and adjusted to the new situation! Every single one! Otherwise, with all the movements of the soil, deep cracks are formed, into which all the water will leak and irrigation will become meaningless. We need to plow everything up and restore the integrity of the fields. As well as the integrity of the hard drive in the computer.

Cold climate service.

There are good authors on this topic, for example, Andrey Parshev. A lot of problems caused by the climate. Annual repair of everything that is destroyed by winter frosts; heating of buildings; thick walls of buildings; underground and aboveground heating mains; elimination of accidents of heating mains, etc. etc. Plus, as a consequence, the unprofitability of all Russian products, because a Russian worker has to be paid much more than a worker in China is paid. The Russian worker needs winter clothing, high-calorie meals, warm apartments, etc.

Serving a vast territory, vast distances, the world's longest road network.

The Russians are like a hunter who climbed into a den and shouted to his friends: I caught a bear! - So get him here! - But he won't let me. The Russians grabbed a huge territory. These are colossal natural resources. It would seem, use it like a boss, develop, settle down.

But ... It was then that everything stopped. Roads. They are not eternal. They need to be built and repaired. The construction of roads and railways does not stop, but they are still few, few, few. Several wars, several large and small revolutions organized from the outside, undermined the vitality of the people. They created an internal enmity, created a search for internal enemies, and led to the collapse of the USSR.

Population growth has stopped. A gap has been created between the rich and the poor.

The poverty of the Russian people is a payback for the territory.

October 7, 2017 10:06 am

You don't even need to invent anything. One clings to another. True, it is not known what is primary, aggressiveness or territory. Maybe the aggressiveness led to the seizure of territories. Maybe the territories have somehow gotten a fool, and now we need to be aggressive in order to keep these territories. But anyway, there are constant external attempts to seize territories. And the people permanently residing in these territories are forced to maintain a huge, powerful army, which is dangerous for the surrounding countries. And at the same time, inside the country, maintain the psychological atmosphere of external threats, external danger (look at today's political talk shows), redistributing the budget in favor of the security forces, the army, the guard and their number. And it will always be so. Because a militarized society, bloated military structures will never let some squishy intellectuals come into power. And they will not obey them.

A militarized society gives rise to banditry and protection, and it, in turn, will never allow any business and production to develop. Bandits will never allow agricultural producers to directly bring food to markets and sell. The militarized society and the leader chooses from the bandit environment. Both manners and policies of this leader must fit into the "rules of good manners" accepted in this society. What we really see. We see manners, politics, and the "elite", and the poverty of the people. There is no money, they are with the army, police and guards. But hold on there, all the best you can have without money. Don't count on mushrooms, berries and fishing, they are also taxed.

It will always be so, as long as there is a huge territory, as long as there is a "united Russia". You have to pay for the love of birches. But it is mortally dangerous for us to disintegrate. Each breakaway territory instantly becomes hostile to the rest of Russia. Instantly everyone is forced to retrain the language from Russian to the local dialect, to the local MOV. Turning the Russians who remained there into slaves.

Is there a way out of this vicious circle? Is there a way out of eternal poverty and backwardness? I think there is a way out. This is the Chinese model. Military, bandit, Bolshevik and communist forces must move. Should give way to useful entrepreneurship. Only useful, not every MMM. And they themselves must confine themselves to control over business and the execution of justice, according to Chinese recipes, with plantings and executions. The dull imitation of Europe with the abolition of the death penalty was made solely in order to plunder the country on an especially large scale.

Serving a multinational people, with all internecine and internal problems.

A huge territory is not a purely territory, a purely geometric concept. This is a huge number of peoples. These peoples are scattered over the territory and do not want or plan to mix with each other. Nations generally do not like to mix except forcibly, as

conquerors mix, forcibly conquered peoples. And in peacetime, each nation lives by itself, in its own circle, in its own territory.

If Canada is mainly inhabited by a strip along the warm Atlantic coast, then Russia is inhabited throughout the entire area, and almost evenly across the European part. The density decreases only towards the north. The same story is with Finland.

Serving the flight of intelligence and capital to countries with better climates.

We saw this tragedy with our own eyes. The tragedy of the collapse of the intellectual building of the USSR. When in 1993 all borders were opened and all sorts of Soros poured into us with their capitals to buy our intellect. Soros grants were high and attractive. And the intellect is gone. Percentage of 80 most efficient people, scientists, specialists.

But not everything was so hopeless. While Russian mathematicians were developing Microsoft Windows and Microsoft Office (as performers, the main profit was, of course, appropriated by Bill Gates and figures of the same level), Russian pirates did not doze and purchased all the developments inexpensively for the country.

There are also huge costs for the education of these people. And they, having learned or earned capital, quickly reel off to the west.

Our deputies are either fools, or bought, but the entire parliamentary system is absolutely ineffective. A system of laws has not been created in 21 years. wherever you go, there is ambiguity and the absence of law. Therefore, entrepreneurs who have earned, and more often grabbed by the law, take their capital abroad.

Illustration of Gödel's theorems.

The first theorem states that if formal arithmetic is consistent, then there is an irreducible and irrefutable formula in it.

The second theorem asserts that if formal arithmetic is consistent, then some formula is not deducible in it that substantively asserts the consistency of this arithmetic.

Translated into popular language, this means that our understanding of any complex system in the world can be:

1. complete, but contradictory (with unexplained paradoxes);
2. consistent, but incomplete, i.e. we never, in the process of cognition, achieve both completeness and consistency at the same time.

According to Gödel's theorem, we cannot fully describe the system based on the data of the system itself. In other words, it is not possible to fully describe the system, being inside this system - any system can be fully described only from the outside - Not exactly and one-sided.

It is impossible to judge the whole by its part, except for the case when a part of the whole is arranged in itself as well as this whole.

It is impossible to describe the system correctly and completely from within this system. The description will be either not correct or incomplete. Today we are inside a system called the universe. Our Universe. But we are not able to describe this Universe correctly and completely. Alas. To do this, you need to go beyond this system, that is, where? To God himself ...

Translated into an even simpler, everyday language, Gödel's theorems mean that any system of laws is legally incomplete. And you can always get around it. Here are some simple examples.

- 1) The Russian constitution says that you can be president for no more than two terms. So what? Putin simply bypassed this ban by casting with a friend Medvedev, who is not dangerous for the throne. He could just as well have cast with his dog, perhaps even harm to the country and the people would have been less.
- 2) Similarly, recently, this story with Tereshkova. Again, a ban for two consecutive terms, and a new move by Putin: canceling the previous terms.

And it would be fine if it was dictated by good goals, for the benefit of the people. But no. Purely for the benefit of a bunch of nouveau riche who plundered the country.

3) Previously, the customer gave the terrorist a bomb and a plane ticket. In order to prevent terrorist attacks on planes, a law was passed: tickets to be sold only with a passport. For this reason, the customer now issues a passport to the terrorists along with the ticket.

It is easy to understand that no amount of bans can prevent terrorists from doing their job. They can complicate things, though.

4) But the matter is even worse. Even people and events known to everyone turn out to be devoid of any meaning. For example, traffic jams. Today they have gotten everyone and the authorities are fighting hard with them. How do they do it? Authorities are building many new road junctions to help people get around busy areas. But what happens in reality? But in reality, taking into account new routes, the directions of movement of people to their new places of work are changing. And stresses with plugs begin to arise in completely different places. Some places are unloaded, others are loaded. And given the growth in the total number of cars, given the poor parking situation, no interchanges can relieve traffic jams. They were, are and will always be.

Conclusions.

Is it possible to create something in such an environment? Is it possible to develop something in such conditions? Obviously not. And our government does what it does. Namely, it builds and builds pipelines to saturate the developed countries with raw materials and support its population in its miserable existence. This is globalism.

What was Gorbachev's mistake?

In the era of the late marasmus Brezhnev, the Central Committee of the CPSU put forward the thesis: a new historical community, the United Soviet People, has been created in the Soviet Union. That is, it sounded that we were all mixed completely, like water with alcohol, and it was impossible to separate us. Then we will live forever, under the banner of socialism and build communism.

Figure 68.

Following the party line, Gorbachev accepted this thesis and decided to bourgeois our socialism a little, to make it a human face. And here the insidious west punched Gorbachev in the gut and fanned separatism. All the stories of deportation surfaced, Crimean Tatars, Chechens and so on. Tatars, Kalmyks got excited. Separatism is a cruel thing and requires brutal and decisive measures. It was necessary either to fall apart, immediately, unconditionally, and that would be the best way out. Because it would preserve the Slavic center, the Slavic state, Slavic Russia. No intermediate Yeltsin. Although it is unlikely that the Finno-Ugric would go for it. They have no life without the Slavs, no one to parasitize.

The alternative before Gorbachev was deadly. For the collapse of the USSR, he could easily fall under the tribunal and capital punishment. It was not his game. The West caught him. But it is not only the West that is to blame, the entire Central Committee of

the CPSU, which was engaged in self-deception about the "single Soviet people", is to blame. It seems like they only did what they were building a single Soviet people.

Neither Gorbachev nor Yeltsin were capable of such measures. Yeltsin, a hidden down, said in general, "take as much sovereignty as you can." Molol not knowing what. He just puffed out his cheeks. But the monument was erected to him, because it did not allow the Slavs to straighten out. He handed over power to the Hunno-Chukhonts in time and thereby preserved the unity of Russia and the slavish position of the Slavic population under the Hunno-Chukhonts.

Figure 69. A hidden down is visible.

Well, then everything rolled downhill, chaos began. Financial pyramids, God knows what. It is good to talk about it in the past, but it was problematic for some sections of the population to survive.

What conclusion. Gorbachev wanted to do everything right. As they say, it was smooth on paper, but they forgot about the ravines. The West betrayed him. In vain he was friends and sat for 8 hours with Reagan and Thatcher. They betrayed, as expected, fanned separatism, fanned Yeltsin. As then Yanukovych was

betrayed. But the West is also not to blame, because it was wrong. He also believed in the unity of the Soviet people.

How should you proceed? Never tell the enemy about your intentions. Reform quietly in the right direction. Do not talk. And today it would be like in China. Wealth and order. Gorbachev talked too much. And they blamed everything on him. Nobody made Yeltsin's photojab with a seal on his forehead. What to take from the down? But they did Gorbachev.

Figure 70.

This is how Putin works today. He quietly let down, prepared the people, lulled vigilance, and robbed the old people. He quietly gathered the Chukhonts around him in the government and quietly lowers the Slavs. How to cook a frog in a saucepan.

Figure 71.

Yeltsin.

Gorbachev gave power to the madman Yeltsin, the hidden down (grandson down) and, in addition, an alcoholic. What are the

characteristics of downs? They do not know how to assess the magnitude of the danger of what they are dealing with. They see the world in a rosy light. They are called solar people. And second, they love to show off to the public, to show their talent, their genius. What Yeltsin did not avoid by showing off on the tank. Generally he said, "Take as much sovereignty as you can." Molol not knowing what. He just puffed out his cheeks. All downs are distinguished by an irrepressible, inadequate thirst for narcissism, and Yeltsin also had it. He loved to make "fateful speeches." It was these qualities that his Zionist bandit entourage took advantage of. Yeltsin easily stepped over both communist morality and the constitution. And when it was needed, the Parliament shot without hesitation. It is strange that Gorbachev did not see through it. Gorbachev got cold feet. I was afraid for my life. But there was reason for fear. Nobody supported Gorbachev in the country. Everyone considered him a traitor. There was no one to rely on. It is surprising that the scribes talk about Yeltsin, a hidden down and a pathological alcoholic, as a significant politician. It was just a battering log with which the gates of communism were kicked out. The corresponding picture was in the days of the USSR. This is undoubtedly a hidden down, because he stubbornly climbed up without having any abilities for this. Unfortunately, doctors do not tell the whole truth. Downism is not the result of accidental chromosome adhesion. This chromosome is defective even without adhesion, it functions abnormally, which is why it adheres. A lot of people are carriers of the down chromosome, that is, hidden downs. These people are very active, energetic, artistic, like to expose themselves in public, to show off. But within themselves they are stupid and cannot realize the magnitude of the danger. These hidden downs are, for example, Yeltsin (grandson down), Khakamada (daughter down), Sylvester Stallone (son down), John Travolta (son down). A lot of Russian star actors have down children. Boris Novikov, Iya Savvina, Evelina Bledans, Fedor Bondarchuk, Anna Netrebko, Konstantin Meladze. By the way, it is quite possible that

Skabeeva is also a hidden downsha, loves to show off and is too active.

The madman Yeltsin gave the country to be torn apart by bandit groups. Kodla swindlers around Down arranged vouchers, GKO's, pyramids, and robbed our gullible and unprepared people. It so happened in Russia that the hidden down Yeltsin chose a successor. Among the successors, the St. Petersburg organized criminal group was the closest to the Kremlin. He chose Putin. This is down's choice.

Putin.

Putin has never been eager for power. Putin is not a public person at all. He was appointed by the dying hidden down Yeltsin. There were simply no others. Putin agreed, although he knew he would lose. He knew he was practically going to an inglorious end. But there was an opportunity to live beautifully. And he lived beautifully. In 1997, Putin was a normal official and bought himself a dissertation with corruption money. This was the ceiling he was aiming for. But suddenly he caught the eye of the hidden down Yeltsin. And sunk into the soul of Down. The fuse for its adequacy, primitiveness, greed, diligence. That's how he became president. By the way, this version is confirmed by the fact that Putin's guards often become governors. And some of them may become president. This career path is deeply imprinted on the soul of Putin. From shit to riches. Putin is a man with a Finno-Ugric (Tatar-Mongol) mentality. Putin is not a Slav, but a distant Yakut-Slavic hybrid, like all the Ural peoples. He is a good tactician, but no strategist. He solves all problems according to the principle of "cut the Gordian knot". Moreover, regardless of the economic and human losses. Because the Slavic majority are strangers to him. It's not a pity for them. Don't underestimate the enemy. Putin is a strong tactician. Very strong. Look at "Tereshkov's" zeroing operation. See the capture of Crimea. See Assad's salvation. Everything is as if on notes. Yes, and his very coming to power (possibly), they wrote, he just came to Yeltsin (with a group of

KGB officers) and put a gun to his forehead. Until the Slavs separate from the Finno-Ugric peoples, Russia will continue to drown in blood until it drowns.

In terms of hybridization, Putin is a first generation Slavic-Tatar hybrid. As you know, the first hybrids are always strong and good. This first hybrid was Stalin, the son of the handsome passing man Przewalski. Putin's father, the Slavic handsome Platon Privalov, made the child Vera Putin, a Tatar woman languishing from loneliness, and then threw them away. Putin's daughter Elizaveta Krivonogikh is very similar to her father and her grandfather Platon Privalov. But Putin's daughter Yekaterina is very similar to her ugly Tatar grandmother, who, according to some reports, is still alive and lives in Georgia, in the house of her husband, with whom she has several children.

Maria Shelomova, officially recognized as the mother of Putin, is not. This has been proven by genetic testing. She is only an adoptive mother. Putin was sent to this family to save him from the constant beatings of his Georgian adoptive father. He was thrown off 2 years in order to attach him to the first grade in a St. Petersburg school.

Figure 72. The correspondent is talking with the real mother of Putin.

On the fate of Putin, another version of the historical and fateful "immaculate conceptions" is shown. Among them is the birth of Stalin from the passing handsome Przhevalsky. And the birth of Christ himself from an unknown traveler. And probably the birth of many outstanding people. The first hybrids are always very good, tenacious, and take the place of leaders.

One important point about the destruction of the USSR.

There are different points of view on any process. These points of view are very different and there are a lot of them. However, there are such perspectives under which the sought processes and their causes are identified most clearly, clearly and vividly. This perspective also exists for observing the process of the collapse of the USSR. And this perspective coincides with the subject matter of this book. This perspective is DNA genealogy.

So, Russia in the first approximation is a mechanical mixture of two peoples: Slavic (60%) and hybrid Finno-Ugric (30%). The Slavic people are softer, more intellectual, but more selfish and more entrepreneurial. The socialist system is not for the Slavs. The Finno-Ugric people are related to the Chinese, this is the Chinese flow of settlement, and more tends to communism and equalization. At the same time, he is inclined to solve all problems clumsily, according to the logic of the Macedonian. Cut the Gordian knot! As their Mongoloid ancestors lived for thousands of years in cramped quarters, in populous yurts, where there was no place for selfishness, where every person was valuable for survival, so today they again came to this way of life. But already at a high technological level.

In 1917, an illogical and strange falsification took place. Guided by the absolutely insane theories of Marx, the Finno-Ugric Lenin accomplished, as it seemed to him, a proletarian revolution. Or the socialist revolution, as you like. Outwardly, everything looked like that. And Lenin himself believed in this. And the people believed. But in reality, as part of the revolutionary proletarians, the Finno-Ugric minority came to power. And they themselves did

not understand this. Everyone considered themselves equally Russian, but everyone wanted to live by their own rules. The Finno-Ugric minority, armed with a "fair" ideology, was able to defeat the Slavic "bourgeoisie" and began to build socialism. Moreover, the most progressive ways and forms of development were declared: science, culture, everything.

However, all the plans were decided by the Finno-Ugric methods. Bolshevik methods. What kind of power, so are the methods. That is, using poke methods, a sledgehammer, pitchforks and executions. And the problems began. The main problems were solved by simple theft from the West. Missiles and a nuclear bomb were stolen, and machine tools and factory equipment were removed from defeated Germany. Even the first to fly into orbit into space. However, there were still problems of everyday life, like minor ones. There are no consumer goods, no clothes, no shoes. No food available. It seems that they began to grow a lot of grain, smelt a lot of metals, produce a lot of electricity at hydroelectric power stations, but there is no good food and radio equipment. There is no end result. There is no way out for the people.

The modern market economy solves such problems easily through exchange. But the Finno-Ugric mentality does not accept speculators and other smart-ass swindlers. Therefore, the external relations of the USSR were limited only to aid to parasitic developing countries. In turn, the adapting Slavic diaspora has adapted to live under socialism using the principle "you are for me, I am for you." Everything was distributed according to cunning, by pull, from under the counter, in secret from the people. And the people understood this. And it seems that speculation is prohibited, but there was a substantial mark-up for good equipment and clothes, mostly imported, at times.

Thus, the Finno-Ugric diaspora wanted to live according to equalization, and the main parameters of socialism seemed to be maintained. The security seemed to be maintained, there were bombs, missiles, tanks, planes. True, for this it was necessary to

violate the socialist principle and pay much more in military institutions. But the Slavic majority did not want egalitarianism and wanted individual freedom. Nobody knows where the truth is. The cruel truth of nature: the weakest must leave. And the Soviet society, whether it wanted it or not, but it embarked on this path, who is the weakest and who is the strongest. At first, a quiet and then open civil war began. Which ended in the victory of banditry in October 1993.

How should you live? Nobody knows this. But it has already been established by trial and error that there is a certain political "resultant" of the social system. There is some "truth." It consists either in a very socially oriented capitalism, close to leveling. Or in a very liberal socialism, with free enterprise, close to capitalism. Something like this. It depends on which side to approach the resultant. And it's not worth fighting for this or that model. Because as soon as a person received intelligence, all his actions became insane. Including the domestication of animals, and cooking food, and smelting steel, and the creation of the atomic bomb. This is all insane. This is contrary to nature. This is the road to nowhere. This is degradation. And this, apparently, will destroy humanity.

Crimea.

You can't fool nature. Where are we going to rest now? Huh? - That's right, to Turkey. And who inhabited the Crimea until it was conquered by the Chukhonts-Muscovites? Huh? - Crimean Tatars, Turkic-speaking people and ethnically related Turks. And the last question. Where would we go today if we had not taken Crimea from the Turks? - That's right, to the Crimea. And it would be nice there. And now it's bad. Now there is Russia, Muscovy. Now there is shit. Flocks of stray dogs, rudeness and rip-off.

Now Chukhnya is officially connected by rail with the Crimea, which is artificially inhabited by chukhnya. Chukhonsky Crimea merged with Chukhonsky Russia. But don't wait. It will never become a resort area. Never. It will be Chukhon territory. Barking

territory. With wooden toilets, killing service and packs of stray dogs. Because Chinese genetics wants to live like this, not offended, but in poverty and cramped conditions. With such a vast territory, clustered around the cities.

Since the time of Stalin, the indigenous population of Crimea was squeezed out and Crimea was purposefully populated with chukhnya: Chukhonts, Mordovians, Udmurts, Muscovites. Therefore, by 1990, the year of the collapse of the USSR, there was practically no Slavic population in Crimea. Neither Ukrainian nor Russian. There was also no Turkic population. 100% chukhnya, haplogroup N. And today's Ukraine does not need it. This is a foreign people. These are the descendants of the Tatar-Mongols. Why are they around your neck?

Role of China.

That's right. On the eve of the surrender of Siberia to the Chinese (and it is inevitable by the end of Putin's rule), the Chinese need to prepare the entire infrastructure. Bridges, roads, pipelines, gas pipelines, railways. Naturally, all at the expense of the good-natured Slavs. So that the Chinese brother was satisfied with the Chukhon brother. And the Slavs will be forced to assimilate later. The European body is still in the price. And who does not want or is not able to give birth, the famine will be arranged. And the inner mentality will be brought up with propaganda.

What idea can magnetize Russia.

There is a simple analogy that makes it possible to understand the political processes taking place in Russia and the world. This analogy is from physics. Materials that are capable of magnetization are called. Or abbreviated as ferromagnets. Magnetized materials have tremendous potential. They are used in electric motors, sound devices, transformers and so on. And including in the iron doors of the entrances, which operate on the

force of magnetic attraction. The strongest man will not open them without an electronic switch.

The essence of ferromagnetism is that matter consists of small magnets - domains. Which are directed in random directions and in general the magnetic force from them is zero. But if such a substance is magnetized using a DC coil, then a powerful magnet with great capabilities is obtained.

Our country is similar to ferromagnets, which are not magnetized. But, for example, the United States, they are magnetized with the idea of profit, business, entrepreneurship. Not everyone in the US likes it, but in general there is a pretty strong magnet, the US state. Which is in the first positions in the world.

Such a magnet appeared in China 30 years ago. The country and the people were really magnetized by the ideas of Lenin-Stalin. They were in China before, but they were somehow poorly perceived by the people. With the death of the USSR, the magnetic idea of communism went to China and gave good results.

Once, in 1917, Russia was magnetized by the ideas of Marx. And in such a magnetized state, Russia defeated Hitler and all Western technologies. Created missiles and nuclear bombs (actually stolen from the west). But then there was a failure. People have lost the idea. Yes, the great people's construction projects were good. They thrive in China today. But we have set up everything, a lot, and what next? What is the sense of life? Selfish people, speculators, hucksters, blackmail, swindlers got out, and destroyed socialism. But was it really so? Was it necessary to stifle small business, small craft?

What idea can rally and guide the Russian people, which have so far been preserved in unity? Arming again and preparing for war? What now?

What is the model in Russia today? This model is that a large people - the Slavs - like a horse carries many small nations in a cart. And the coachman of this whole cart is the northern Chukhonsky people, hybrids of Yakuts with Slavs. But the

coachman had become quite insolent. The Slavs are poorly fed, and those who are in the cart are fed better. Well, he eats for seven. Do the Slavs need it? Does he need this wagon?

Now it becomes dangerous to express ideas. Putin's Caudla has already invented many laws against free-thinking. Prohibitions, fines, prisons, terms. They can be arrested for separatism, insulting the authorities, and so on. Therefore, I will only ask: does the Slavic people need to play the role of a horse and drag this cart with Chechens, Mordovians, Chukhonts, Udmurts, Kalmyks, Buryats and others? It is necessary that today the Chukhontsy who have become completely insolent and beat the Slavs with a whip? All our joy is the territory on which it is no longer possible to walk freely. The Chukhonsky coachman appropriated everything for himself. And horses cannot be fed for free. We need to take everyone, the Slavs need to drag everyone, but picking mushrooms and berries is no longer possible.

Once upon a time, 1000 years ago, we were all small peoples. We spoke local dialects and fought among ourselves. But history has ground us into one dough, into one people: the Slavs. Grind, but not all. All Chechens, Dagestanis and others, they seem to be Russians. But their main identifier is their own republic. And they will never mix with the Slavs and will not be assimilated. So why should the Slavs drag these peoples? Let's give them freedom, let them live their own lives.

I think a simple idea makes sense. It is necessary to purposefully, gradually, planned, without chaos, separate other peoples from the Slavs. All states in the world are crumbling. The USSR collapsed and there is no point in collecting it. It is necessary to draw up the order of separation of the republics from the Slavic republic. Clarify boundaries, interests, take into account the size of the population. No need to wait for bloody events. There is no need to wait for the chaos of the 90s, when everything fell apart along random boundaries and created problems for millions. We need to start with confederations, and continue to

pursue a policy of alienation, independence, and up to complete separation.

It is necessary to include the brains. Tatarstan wants to secede? You have to sit down at the table and think. Clarify reasonable boundaries so that there are no offenses when separating.

What could be the new Soviet Union.

Year 1977. Brezhnev is already bad, but the country lives and hopes for the best. The people work and create. The people do not know that Brezhnev's agony will last another 5 years, then for another 3 years the Soviet leaders will cling to power, but unknown diseases will knock them down and clear them out. In the meantime, the trade mafia of the USSR will create a deficit and make people feel hopeless. And then the "savior" will come, Mikhail Sergeevich. As it turned out, with a hole in the head. And will give power to the hidden down Yeltsin. Which will squeeze out of the USSR-Russia Slavic brothers, Ukrainians and Belarusians. Who will allow his Zionist entourage to arrange an orgy on the ruins of the USSR. And then he will give power to the Chukhontsa Putin, who will complete the destruction of the Slavic people.

https://www.youtube.com/watch?v=judHwa3dA_M

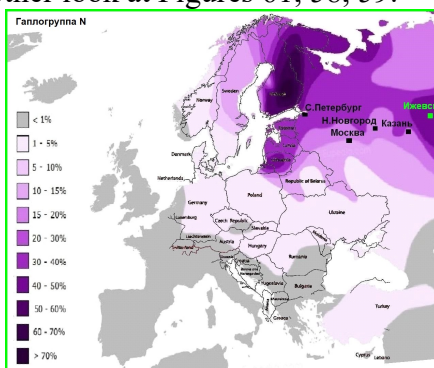

But the memory of what the USSR was like in 1977 has survived. She's here in this video. Here is energy, talent and genius. Such was the USSR. And the memory of him cannot be eradicated from the people.

The new Soviet Union must be MONO-NATIONAL. This is Lenin's mistake. Attached parasites that are "equal" and "have the right to detach." They lived 75 years for free, bred, and faded away. Moreover, the Russians were killed at parting. We don't need such repetition. First, the initial Russia is clearly defined, within the real borders. Purely Russian without any crap. Then, in all neighboring territories, polls are carried out: do they want to merge into Russia without any borders, autonomies, federations, without any national languages (let the cormorants at home, but

not officially), without any requirements, on a general basis. They want to - join in. If they don't want to, fuck you. Only this will save Russian civilization. This is exactly what China is doing. No autonomy or anything else. And no pity. Nature knows no pity. Either you ran away or you were eaten. Any pity today can turn into serious failures in the future. The Slavs must take power into their own hands. Forever and ever.

Where should the border be between the Slavs and the Finno-Ugric.

Let's take another look at Figures 61, 58, 59.

Азиатские гаплогруппы в российских республиках.

Галло Респ	R1a	R1b	N	J	I	G	E	C	Q	L
РОССИЯ	47	6	25	5	15	4	5		1,5	
Татарстан	20,7	1,9	28,3	15,1	13,2	7,6	5,7	5,7		
Чувашия	27,9	2,3	27,9	16	11,7		14			
Мордва	42,4	10,2	10,2	15,3	5,1	3,4	10,2	1,7		
Башкирия	32,1	44,5	16,3	2,9	0,5	1,4	0,7	0,5		
Чечня	1,6	2,5		70		4,1			8,2	12,4
Дагестан	3	5		70		5	2			
Ингушетия	1,5	2,5		80		4			8	12
Осетия	6,7	7,0		20		46,7	13,3		6,0	
Удмуртия	10	2,3	82		1,1					
Марий Эл	47,7	2,7	50		8,1					

It seems that the border between the Slavs and the Finno-Ugric should be drawn in such a way that Moscow would remain with the Slavs. Given the Slavic origin of the name Moscow. Slavs are the majority in modern Russia. And it is useless for the titular people to give their capital to the national minority. But the second largest and most important city, St. Petersburg, may well become the capital of the disconnected Finno-Ugric state. This can be seen from the density of the Finno-Ugric population. And the claims between Finland and St. Petersburg due to the proximity of the location will immediately disappear. Such historical cities as Veliky Novgorod, Tver, Vladimir, should go to the Finno-Ugric. Historically, they were also more often Ugro-Finnish. At the same time, as is known, the tsarist capital was moved to Moscow. They explain this in different ways. However, at the core, in the deepest part of the base, was the expansion of the pathological greatness of the Finno-Ugric peoples to the primordially Slavic territories. That is, the revolution of 1917, in fact, an ethnic Finno-Ugric coup, took place in addition to the capture of the Slavic capital of Moscow by the Finnish-Ugric peoples. It must be returned to the Slavs.

Further, all the Finno-Ugric republics must go to the Finnish-Ugric state. Here both the percentage majority, and historically for the Slavs, they were enemies, invaders, tribute collectors, exploiters. Except for Bashkiria. It has relatively few haplogroups N and J.

The Slavic territory (marked in pink) should include the Smolensk region, then Moscow, Vladimir, Nizhny Novgorod, then down Ryazan, Tambov, Penza, Ulyanovsk, Samara, Orenburg, Bashkortostan, Chelyabinsk, Yekaterinburg (along the Chusovaya river), Tyumen, Omsk, Tomsk, Krasnoyarsk regions, Irkutsk , Southern part of the Yakutsk region (along the Lena River), Buryatia (for continuity), Trans-Baikal Territory, Amur Region, Khabarovsk Territory, Primorsky Territory, Sakhalin, Magadan Region, Kamchatka Territory.

Southern border of the Slavic state Rus. Bryansk, Kursk, Belgorod, Voronezh, Rostov, Krasnodar Territories, Stavropol Territory, Kalmykia, Astrakhan Region, Volgograd, Saratov, Samara, Orenburg, Chelyabinsk, Kurgan, Tyumen, Omsk, Novosibirsk, Altai Territories, Altai Republic, Zabaikal, Buryatia Territory, Amur Region, Jewish Region, Khabarovsk Territory, Primorsky Territory, Sakhalin, Kuriles.

What did the "Mongol-Tatars" look like?

Taking off the masks from the Mongol Tatars ...

<http://rateh.ru/maski-mongolov>

Author: Tatiana Kudryavtseva.

Unfortunately, the scribes of history have done a lot so that the true events that took place during the "Mongol-Tatars", and in other times, were forgotten and erased from our memory. Destruction of authentic evidence, their falsification, suppression of the remaining traces - these are the few tools that are used by the enemies of humanity in order to control society and enslave the consciousness of an individual. But it is not always possible to hide and destroy all artifacts. So it is with the topic of "Mongol-Tatars": so much data has accumulated that contradict the official version of history, that very few people still have doubts that "Mongol-Tatars", like the "yoke", never existed. And also the fact that the "Mongolo-Tatars" are not at all Mongoloids, as they imposed on the whole world, but the Europeans!

What did the "Mongol-Tatars" known to all of us look like?

<http://rateh.ru/maski-mongolov>

According to the official version of history, "Mongol-Tatars" are representatives of the Mongoloid race, who have a different eye structure than other races, and above all these are slanted eyes with a highly developed fold of the upper eyelid, black hair, dark eyes, with a yellowish skin color, with strongly protruding cheekbones, flattened face and poorly developed hairline.

And, of course, in all films "Mongol-Tatars" appear exactly as described above. In history lessons, teachers repeat the same thing, teachers in universities hammer into the heads of students the information that "Mongol-Tatars" are Mongoloids, and nothing else. With rare exceptions, teachers who are not afraid to go across the educational system.

In general, there are no such affirmative sources that would unequivocally say that the "Mongolo-Tatars" were Mongoloids. Rather, on the contrary, there are a very large number of artifacts that indicate the opposite. Or rather, they say that all famous

personalities of the times of the "Mongol-Tatars" were Europeans! And not just Europeans, but representatives of the white race - it will be more correct. But this information is carefully hushed up, because we will have to rewrite the whole history that was imposed on us in the 18th century.

Let's take a closer look at some of them.

Genghis Khan.

To begin with, history knows many Genghis Khans. But we will consider the one who became famous all over the world. The one who is called the founder and first khan of the Mo (n) Gol empire.

In fact, Chinggis Khan, as many people think, is not a name, but a title. And khans were called military princes in Russia. What is the real name of the well-known Genghis Khan? The real name is Timur. Or, as was customary in those ancient times - Timur Chin (or Temujin, or Temuchin in a distorted pronunciation, as Genghis Khan was often called). The name of Genghis Khan was sorted out. Now let's see what kind of "Mongol-Tatar" he was.

Of all the surviving portraits of Genghis Khan, historians declared only one authentic. And this portrait of Emperor Taizu (Genghis Khan) is kept in the National Palace Museum in Taipei, Taiwan:

Figure 73.

At the expense of the reliability of this image of Genghis Khan, a detailed study was carried out and it turned out that this portrait on a fabric woven with a length of 59 cm and a width of 47 cm

was starched and edged in 1748 ". Those. this portrait dates back to the 18th century !!!

Among the reproductions of Genghis Khan, another "medieval" Chinese drawing is widespread, which was made even later than the "official" portrait:

Figure 74.

Made with ink on silk and depicts Genghis Khan in full growth in a Mongolian hat with a Mongolian bow in his right hand, a quiver with arrows behind his back, his left hand grasps the hilt of a saber in a sheath.

Also preserved is a Chinese drawing of the 13th-14th centuries, which depicts Genghis Khan during a falconry:

Figure 75.

As you can see, in this picture, Genghis Khan is not a Mongoloid at all! And a typical Slav, with a thick beard and signs of a clearly white race.

Yes, and Marco Polo sees Genghis Khan as a European, and in his miniatures draws him as a one hundred percent Slav. In the miniature "The Wedding of Genghis Khan to the Kingdom":

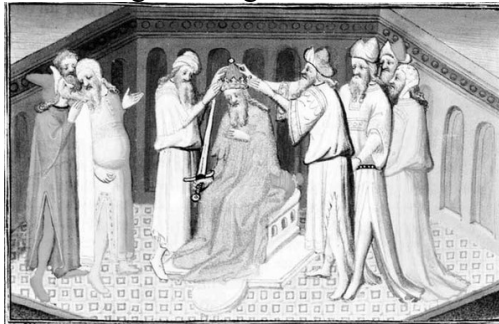

Figure 76.

Marco Polo dresses both Genghis Khan and his retinue in European clothes, crowning the Great General with a three-leafed crown, which has always been an attribute of European rulers. And the sword that Genghis Khan holds in his hands has a shape that was peculiar to Russian swords!

So it turns out that Chinggis Khan was a blonde guy with blue eyes !!! So much for the Mongols!

So, in addition to the "official" evidence recognized by science, there are others according to which Timur-Chinggis Khan looks more like a Slav than a Mongoloid, who are not very tall, have clearly black hair and dark eyes. Nevertheless, it is not customary to talk about it.

But before drawing any conclusions, let's see how other Great commanders and leaders of the Mo (n) Gol era looked like, whose names have come down to us through the centuries.

Khan Batu.

Batu Khan, or rather Batu Khan, was the grandson of Timur-Chinggis Khan. This fact is recognized by modern historians, and it is written about it in chronicles and other documents.

Well, as usual, historians see him as a Mongoloid. Here is a portrait of him, which they recognize as genuine:

Figure 77.

This is a Chinese manuscript "The History of the First Four Khans from the Genghis Clan."

But let's think logically. Batu also belongs to the Borzhigin family (-IN) and should, at least from the edge of his ear, resemble his grandfather, i.e. Chinggis Khan, and have either blonde hair, or blue eyes, or be at least 170 cm tall, or has other signs of a white race.

A bust of Batu Khan, located in Turkey, has survived to this day:

Figure 78.

Of course, looking at the bust, it is difficult to draw conclusions about the color of his eyes and hair. But something else is visible. Before our eyes appears a typical European with a thick beard, in whose features not the slightest sign of a Mongoloid is observed at all!

And here is another source - "The capture of Suzdal by Batu in 1238. Miniature from the "Life of Euphrosyne of Suzdal" of the 16th century. List of the XVIII century ":

Битва русских дружин с войском хана Батыя. Миниатюра из книги "Житие Евфросинии Суздальской"

Figure 79.

This miniature depicts Khan Batu in a crown, on a white horse, who, accompanied by his squad, enters the city. His face is purely European, in no way Turkic. Yes, and some kind of Slavic army, isn't it ?!

In another chronicle illustration, Batu Khan appears in the image of the Russian tsar with his Russian warriors:

Figure 80.

So the grandson of Genghis Khan, Khan Batu, did not go far from his grandfather in appearance.

Move on.

Khubilai.

Kublai or Kubla Khan, like Batu Khan, was the grandson of Genghis Khan, and, like his grandfather, became famous in earnest. Consider this mo (n) goal.

According to the official version of history, Khubilai conquered almost the whole world, capturing China and practically conquering Japan (and if it were not for the tornado, he would have succeeded). Of course, the men of the official history see him as a Mongoloid:

Figure 81.

For me, Marco Polo portrays Kublai as a European. In *The Book of the Diversity of the World*, there is an illustration depicting the arrival of Marco Polo at Kublai's headquarters:

Figure 82.

Here Kublai is again not my goal, but a European !!! Facial features, beard - everything indicates that we are faced with a man of European appearance.

And the 4 wives of Khubilai:

Figure 83.

As you can see, they are not representatives of the Mongoloid race at all, and look like typical ladies of medieval Europe. And in crowns with trefoils, and the trefoil is the fighting symbol of the Slavic-Aryans !!!

And here is another illustration of The Book on the Diversity of the World:

Figure 84.

On it, Khubilai presents the Polo brothers with the "golden lady" and sends them as ambassadors to the Pope. Again, the appearance, clothing, attributes - everything is European!

I would also like to draw your attention to the "golden lady". This is the so-called golden paiza. Paiza is a credential tag issued as a symbol of the delegation of power, the endowment of special powers. Surprising as it may seem, all the paizi belonging to the Mo (n) Gol khans were found on the territory of Russia. Not a single paizi was found in the areas of modern Mongolia! This is another confirmation of the tale of the "Mongol-Tatar" yoke.

But back to Khubilai.

A 13th century Japanese scroll depicts Kublai's campaign in Japan:

Figure 85.

On the right of the scroll is a wounded Japanese warrior, on the left are medieval mo (n) goals. In the painting, Khubilai's Mo (n) Golsky army is traditionally dressed in Russian clothes and boots. Noteworthy is the foot formation characteristic of the tactics of the ancient Russians, as well as the traditional Slavic weapons: straight swords and compound bows. And pay attention also to the fiery-colored crest-oseledets protruding from the crown of each of the three warriors-mo (n) heads - a detail of the external appearance inherent exclusively to the Slavs. But the most convincing are those who leave no doubt about their ethnicity.

One of Khubilai's ships can be seen on the miniature from the "Scroll of the Mongol Invasion":

Figure 86.

Ship mo (n) Golskaya flotilla mainly with Slavic warriors! The same as in the previous picture.

Those whom the Japanese call medieval mo (n) goals are one hundred percent Slavs!

On our own behalf, we add that the name Khubilai is a typical word Habel or Haber. Once again: in the old days they were not at all ashamed of their belonging to the Habers.

Tamerlane.

The same story can be traced here as with Genghis Khan. Tamerlane is not a name, but rather a nickname. And his name is Timur.

According to the description of Ibn Arabshah, Timur was tall, broad-shouldered, had a large head and bushy eyebrows, had long

legs and long dry arms, and wore a large beard. Timur was lame on his right leg. His eyes were like candles, but without sparkle. He had a loud voice, was distinguished by powerful strength and great courage, he was not afraid of death, he retained a clear memory until the end of his life, did not like jokes and lies, on the contrary, he liked the truth, even putting him in a difficult situation.

TN Granovsky in his "Complete Works" writes that Timur was born with white, like an old man's hair and along the female line he belonged to the offspring of Genghis Khan (who, as the sources tell us, were fair-haired and blue-eyed). Although other historians claim that Timur did not belong to the Genghisid family. But we have a different task, the main thing for us is whether he was naked and what he looked like.

In the town of Shogut, along with the bust of Batu Khan, there is also a bust of Timur:

Figure 87.

As you can see, Timur-Tamerlane here is a European, a typical Cossack. And in the minds of Italians, Dutch, French, Timur-Tamerlane is also a representative of the white race, not Mongoloid:

Figure 88.

On Iranian miniatures of the 15th-16th centuries, Timur is painted with a thick white beard and the outward signs of a white race:

Figure 89.

In general, the authors like to depict Timur-Tamerlane in a European crown with three-leafed leaves:

Figure 90.

Another Iranian miniature of the 15th century by an unknown author:

Figure 91.

Here Timur looks European.

But, surprisingly, some contemporary artists of Timur-Tamerlane in their works reproduce his appearance not as a Mongol, but as a European! Despite the fact that in the films he appears as one hundred percent Asian. So, on the vintage block, Tamerlane is quite a Slavic person, only with a black beard (apparently, so that the censorship would let it go to print):

Figure 92.

As for the appearance and appearance of Timur-Tamerlane, then there are no problems at all. Everything fell into place after in May-June 1941 excavations were carried out in the Gur-Emir mausoleum, the burial vault of the Timurid dynasty. The expedition uncovered five graves: Timur-Tamerlane, his sons Shahrukh and Miranshah, his grandsons Ulugbek and Muhammad-Sultan.

MM. Gerasimov, a well-known anthropologist and sculpture, the author of the method for restoring the external appearance of a

person on the basis of skeletal remains, was entrusted with such an important task as the appearance of the real Tamerlane to the whole world. He restores his sculptural portrait and is surprised to see that he has turned out to be a man of the European type. This is a natural European! Convex, not flat face:

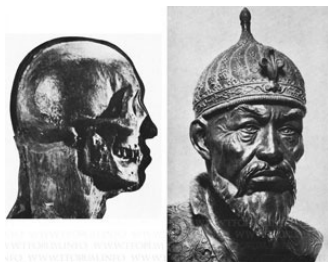

Figure 93.

Also Gerasimov in his book "Fundamentals of face reconstruction from the skull" reports the following: "The discovered skeleton belongs to a strong man, relatively tall for a Mongolian (about 170 cm)."

And the cut of Tamerlane's eyes turns out to be not at all Mongoloid.

Here are your conclusions: Tamerlane, like his predecessors - the "Mongol-Tatars" considered above, turned out to be a fair-haired Caucasian type !!!

Ulugbek.

Figure 94.

Ulughbek is the great Uzbek astronomer and patron of sciences, the grandson of Tamerlane, the ruler of Maverannahr, and after the death of his father Shahrukh was the ruler of the entire empire of Tamerlane.

Ulughbek, like his grandfather, Tamerlane, was of European appearance.

Here is what Gerasimov writes about the restoration of Ulughbek's skull: "Ulughbek's skull is well preserved and, apart from the loss of almost all teeth (during his lifetime) and the cut off corners of the lower jaw (at the time of the murder), it should be considered as complete ... Basically, the skull has undoubtedly, there are more elements of the Caucasian Pamir-Fergana round-headed type inherited from his father, Shakhrukh. There are, however, small features in the details of the structure of the skull, undoubtedly, reminiscent of his great grandfather Timur ":

Воскрешение головы Улуг-бека (сырх. Ташева).

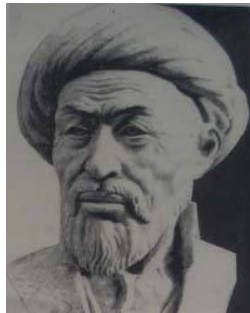

Figure 95.

In other words, although Ulugh Beg's appearance has some significant signs of Mongoloidism, it nevertheless belongs to the Caucasian type.

Thus, we figured out that there were no "Mongol-Tatars" in principle, and those who were called "Mughals" and "Tartars" were people of the white race, Europeans. And famous "Mongol-Tatar" personalities, such as Genghis Khan, Batu, Khubilai, Tamerlane, Ulugh Beg, were Europeans. It is a fact! A fact that will

have to be recognized not only by Russian historians, but also by the whole world.

On our own behalf, we add that in the light of our concept, all these conquerors were Slavic-Yakut hybrids. Therefore, there is nothing surprising in all the portraits.
