

Neutralization of hybrid threats from objects from dark energy & dark matter and other cosmic bodies

Vasil Korniienko, Diagnostics Academy LLC, Odessa, Ukraine v.gkorn@ukr.net

The origin of these threats, as well as the methods of detecting such objects, are unknown to science. But we experimentally confirmed A. Einstein's service station, according to which there is nothing in the world except the energies, the interaction of which forms a quantum electromagnetic field (QEF) in matter. Therefore, loads on matter cause perturbation of its QEF in the form of waves of quantum electromagnetic energy (C-radiation). In the spectrum of these energies, we observed in the summer of 2003 as an object of dark energies in the form of an Energy Information Field (EIF). occupied the Earth and the Sun. On Earth, the EIF sucks quantum energies from technology and sends them to the EIF, which occupied the Sun, which enhances the suction of solar C-radiations from it, and with them the deep solar heat, which causes massive forest fires and accelerates global climate warming. The results of these studies allowed us in May 2025 to discover a large planet from dark matter near the Sun. which generated a powerful stream of cosmic cold, and its gravity created giant cracks in the Earth, which foreshadowed its destruction. However, we have tested a spiritual practice that allows us to eliminate such threats from space. A method of neutralizing the effect of EIF on accelerating global climate warming is also proposed.

Keywords: Objects from dark energies & dark matter; Hybrid threats; Stopping global climate warming

1. Introduction

It is known that currently only objects are available for observation, the mass of which is only 5% of the total mass of the Universe. The remaining 95% of its objects consist of dark energies & dark matter, the methods of detecting which, as well as hybrid threats emanating from them, are unknown to science. Among the dark energies are geopathogenic radiation (GI), the existence of which physics considers unproven, because it does not have devices for their detection, although their ability to cause diseases is well known.

At the same time, according to Einstein's STO, there is nothing in the world except for energies [1], the interaction of which, in accordance with electrodynamics [2], form a quantum electromagnetic field (QEP) in any matter. Therefore, the loads applied to matter cause perturbation of its QEF in the form of C-radiation, [3,4], which are capable of carrying hybrid threats, including coronavirus and other infections, [5]. At the same time, the effect of the gravitational forces of celestial bodies on the Earth causes stress in its matter and perturbation of its QEF in the form of C-radiation, which explains the origin of GR and many diseases.

We also found that any technique that uses electricity generates C-radiations. This is due to the fact that when the rotor of any electric generator rotates, its matter is subject to centrifugal loads, which causes perturbation of its QEF in the form of C-radiation, which induces quantum energies in the stator windings. Therefore, power plants together with electric energy produce C-radiation, which is unknown to science. Together with electricity, they enter cellular communications and other equipment that generates them into the environment, which increases the concentration of quantum energies on Earth, which causes diseases.

In addition, in the spectrum of C-radiation, in which science does not work, we observed how in the summer of 2003 the Earth and the Sun occupied a huge EPI. On Earth, it was divided into EIP whose

diameter was 1-2 km, and then into smaller factions that quickly occupied the Earth. During this period, we found that EIFs understand a person's thoughts, but do not come into contact. At the same time, they remotely and through any obstacles suck energy out of people, which many do not notice, but feel dizziness and cardiovascular insufficiency. At the end of August 2003, TV showed how trucks collected people's corpses on the streets of Paris and northern Italy. Then, during August 2003, "extra" 90,000 people died, and in one of the small towns of the United States, another 10,000 people died due to cardiovascular failure. But soon the EIFs were divided into smaller factions, which led to a decrease in their suction of the energies of their people, so the mass mortality of people stopped. However, according to the UN, over the past 20 years, mortality due to cardiovascular failure has increased by 20%.

We also found that C-radiation, which EIF sucks from cellular communications, cars and other equipment, they send to the EIF, which occupied the Sun. This allows EIF to enhance the suction of quantum energies from its matter, which causes perturbation of its QEF in the form of solar C-radiation, and with them deep solar heat, which causes the occurrence of mass forest fires and global climate warming, [6].

We reported on this occupation and the impact of EIF on global climate warming at the World Climate Change Conference, Moscow, October 2003 [7].

In addition, it is shown below that in May 2025 we discovered a planet from dark matter in the Sun, which creates hybrid threats to the security of the Earth and humanity.

Therefore, the methods for detecting objects from dark energies & dark matter are shown below and a method for neutralizing the influence of EIF on global climate warming, as well as the results of testing the spiritual practice of referring to God that we have developed, are proposed. Its use made it possible to remove a dark planet from the Earth at a safe distance 1 night, the mass of which is close to the mass of Jupiter and 3i/ATLAS, as well as remove dark spots on the Sun, which reduced its activity.

2. Methods

In this work, to detect and assess the level of C-radiation that generates objects from dark energy & dark matter, we used the GRV-compact device, which is mass-produced in the Russian Federation to the sensor we developed, which makes it possible to measure the C-radiation of any object by their effect on the change in the area of electric discharge in the gas discharge chamber of the device.

Due to the fact that this device is a discrete principle of operation, we also used sensory sensations in the palms of experts to determine the location of C-radiation, which made it possible to significantly speed up the instrumental assessment of the level of C-radiation emanating from the object of interest. More details on this part of the methods are set out in [6].

In addition, due to the almost complete lack of science knowledge about the detection of objects from dark energies & dark matter, as well as on the basis of published CIA research results that the reliability of articles published in the yellow press is 90%, we analyzed articles published in the journal UFO (Kaleidoscope Publishing House, RF) regarding the involvement of an alien civilization in the occupation of the Earth and the Sun by a field of dark energies EIF.

We have also developed a spiritual practice for eliminating hybrid threats, which is based on our experimental confirmation of STO Einstein and other known achievements of science. This knowledge does not require us to believe in God, because we are confident in His existence, which allows us to

apply spiritual practice, the mechanism for achieving effectiveness of which goes beyond the knowledge of modern science.

3. Results of our research

We conducted these studies without any third-party funding for 20+ years. They made it possible to experimentally establish that stressed matter generates energies, the interaction of which forms stable mobile quantum electromagnetic fields, which is unknown to science. Their existence follows from Einstein's service station, according to which any matter, including the one from which the human body consists, consists of energies and has a QEF.

However, in the form of what the scientific journals of the English-language press demand for services in preparation for the publication of one article from \$3,000 to \$8,000, we did not publish articles in these publications. Therefore, the results of studies of objects from dark energy EIF, and then objects from dark energies, which are published in various scientific journals, are summarized below.

3.1 Detection of objects from dark energies that occupied the Earth and the Sun and their impact on global climate warming

For the first time, we discovered EIF in the summer of 2002 far in Space in the form of a region that generated powerful cosmic C-radiation, similar in sensation to those that created the emitter of technogenic C-radiation developed by us, with the help of which we protected ourselves from solar C-radiation during high activity of the Sun in 2001-2002. However, the C-radiation that came from it caused sensory sensations in half of the palm, which was not observed in the foreseeable part of the Universe. Therefore, we developed a C-radiation sensor, which was fixed on the telescopes provided by the Department of Astronomy of Odessa State University, and then on the more powerful telescope of the Academy of Sciences of Ukraine in Kyiv. These studies made it possible to establish that this object flies to Earth from the constellation Bootes. However, telescopes did not find it.

Nevertheless, this object was rapidly approaching and in the summer of 2003 hovered over the Odessa Bay in the form of a huge EIF, which did not appear visually, but generated powerful C-radiation. Soon it began to be divided into smaller EIFs, which scattered throughout the Earth. At the same time, they hung at the antennas of cellular communications and sucked out C-radiation from equipment and people over multi-storey residential buildings at a distance of 50-70 meters and thin rays.

At the same time, we found that EIFs are able to suck quantum energies from a person's QEF through any walls and floors, which causes pain in the matter of his body. cardiovascular failure and severe dizziness.

Soon, EIFs occupied all buildings and GR and since then have been constantly sucking quantum energies out of people. According to the UN, over the years, the death rate of the world's population from cardiovascular diseases has increased 20 times, and up to 30% of people suffer from urinary incontinence, against the background of an increase in the concentration of EIP in buildings, which is due to their negative impact on people.

We also found that the occupation of the EIF of the Sun and the suction of quantum energies from it causes perturbation of the QEF of its matter in the form of waves of solar C-radiation, which contain deep solar heat, which causes plant fires and massive forest fires on Earth. At the same time, we found that the propagation speed of these waves correlates with an increase in stresses in solar matter and perturbation of its QEF and can reach 50,000,000 km per second, which is 16.7 times the speed of light.

This experimentally confirms the theory of the Big Bang, the power of which was incommensurable more than the perturbations of the Sun's QEF under the influence of EIF. Consequently, the propagation velocity of the C-radiation that resulted from the Big Bang was much higher than the speed of light.

This EIF was approaching the Earth from the constellation Bootes, the probability of detecting the Earth is commensurate with the detection of a needle in a haystack. Therefore, it was assumed that the EIP used a lighthouse, which allowed it to fly to Earth and hang over the Odessa Bay. Such a beacon could be a long-range space communications radio station, which is located on the opposite side of this bay in Yevpatoriya. Therefore, we sent a request to the management of this station for broadcasting by their radio station calls to brothers in mind in the direction of the constellation Bootes. In response, we were informed that by order of SITI, an institute from the United States, this radio station broadcast such calls 2 times in this direction. The first of them took place in 1999, and the second in May 2003, for which, on behalf of SETI, a company from the USA transferred \$500,000.00 to radio stations. At the same time, shortly after this broadcast, the company soon went out of business. Consequently, the broadcast of these programs was the beacon that allowed the EIP to reach exactly to Earth. But he did not respond to our requests from SETI to comment on this information.

The possible consequences of the arrival of EIF on Earth can be judged by an article that was published in the journal UFO in early 2000. It was written by a meteorologist who, together with his wife, carried a 6-month watch at a meteorological station in Russia beyond the Arctic Circle. Once a UFO flew to the station in the form of a sphere with a diameter of 2.5 m, from which several little men came out, whose height did not exceed 15 cm, who said that they were from Mercury and were intelligent life based on a mushroom. At the same time, one of them drew attention to the fact that the station used radio communication, which is very dangerous because its coordinates are easy to detect, which can attract civilizations from Space that are much stronger than ours and can destroy life on all planets of the solar system.

In addition, around the same years, a journalistic investigation was published in this magazine on the fact that a 14-year-old boy disappeared in one of the villages of Russia. After 4 years, he returned home and stated that, by his consent, he was taken by a UFO to another planet, where he, along with 90 boys of the same age from all continents of the Earth, were taught at Star College. They were taught not a human life form, not friendly to people, methods of controlling crowds of distraught people in the right direction.

At that time, this article did not arouse much interest in me, because there were no precedents for the appearance of crowds of distraught people on Earth. However, after the arrival of EIPs that reacted to human thoughts and had the ability to suck quantum energies from people, which caused pain no worse than from a beat, it became clear that these EIFs could well be a hybrid weapon of an alien civilization, which is controlled by graduates of Star College. Moreover, they are constantly connected with each other and their curators at the mental level.

The possibilities that this type of connection opens up are evidenced by the fact that that after this guy was summoned to the military registration and enlistment office for a medical examination for conscription into the army, he contacted his alien curator, who, after listening to him, ordered him to approach the chairman of this commission the next day, who, without words, signed a medical report stating that this pre-conscript was not suitable for military service. At the same time, he added that a horror story appeared to him in a dream, which demanded to sign this medical report.

Consequently, representatives of this civilization have the opportunity at the mental level to dictate their will to specific people on Earth. Perhaps therefore, the physics of 100+ years has not experimentally confirmed Einstein's service station, which significantly slows down progress in detecting objects consisting of dark energy & dark matter.

In addition, Star College graduates, who are now about 40 years old and are approaching the age limit for their mission on Earth, to which aliens prepared them. This suggests that the increase in the number of wars that have taken place on Earth in recent years is due to the mental impact of alien civilization on key figures involved in these wars, the purpose of which is to exterminate the Earth's population.

Therefore, it is possible that the recent arrival in the solar system of the interstellar object 3i/ATLAS, which is the spacecraft of this civilization, portends the final stage of this long-term operation to cleanse the Earth of humanity.

3.2 Detection of a planet from dark matter and hybrid threats emanating from it and their neutralization

The results of the above studies made it possible to apply the inherent in any person, with the help of which we found an object in the Sun, from which a powerful stream of cosmic cold emanated, which science did not notice.

We first detected this cold stream at the end of May 2025. Which came from a space object, which is why spring at the latitude of Odessa, Ukraine, was not infrequently cold. This stream of cold was well felt with an open palm. In the area of multi-storey buildings, its location was difficult to find. Therefore, at the end of May 2025 I went to the Black Sea coast, where I discovered that east of the Sun, at a distance of 2 solar disks from it, there was an object from which a stream of cold air emanated, the temperature of which was 20-30 degrees below the temperature of the sun's rays. Over the next 3 months, this object moved to the West and was below the Sun at a distance of about 7 solar disks from it. At the same time, the temperature of the flow of this cold during these 3 months did not change, which foreshadowed winter with temperatures in the middle latitudes by 20-30 degrees will be lower than usual.

The above results of our research suggest that the source of this cosmic cold was a planet from dark matter. This is due to the fact that its approach to the Sun causes an increase in the forces of the effect of solar gravity on the matter of this planet, which causes perturbation of its QEF in the form of C-radiations of this planet, which contain the cosmic cold of its matter. That is, the physics origin of this cold is the same as the deep solar heat, which is carried out by solar C-radiation from the bowels of the Sun. The only difference is that the processes occurring inside the Sun heat its matter, while the matter of a dark planet is close to the temperature of the Cosmos, which determines the low thermodynamic potential of its C-radiation.

The interaction of the C-radiation of this planet and the flows of their cosmic cold with the energy of the Earth's atmosphere caused the formation and increase in the number of powerful hurricanes and tornadoes, which was constantly reported on the Internet. And the impact of the gravitational forces of this planet on the Earth led to the formation of soil faults unprecedented in length and depth on many continents of the Earth, an increase in the number of earthquakes and an increase in the activity of volcanoes. Therefore, it is obvious that the mass of this planet is much larger than the mass of the Earth, and its approach will cause the emergence of gravitational forces that can destroy the Earth and turn it into an asteroid belt.

Moreover, the number and speed of occurrence of these soil faults indicated that there was very little time left before the destruction of the Earth. However, the Chief Astronomer of the Ukrainian Academy of Sciences, after listening to me, said that this could not be, because

nothing like this had ever been observed before. Therefore, I did not waste time coordinating my actions with NASA, especially since the achievements of science in space technology will not allow us to detect this dark planet and change its trajectory. In order to prevent the destruction of the Earth. But this is within the power of God, whose origin from the Big Bang we have long substantiated and developed the spiritual practice of turning to God.

Therefore, on August 14, 2025, we applied spiritual practice so that God would remove this planet at a safe distance from the Earth. As a result, in the morning of the next day, the flow of cosmic cold emanating from this planet disappeared, like the planet itself. Gone, too, are reports online of more Earth faults emerging and more hurricanes and tornadoes.

At the same time, a message from NASA astronomers appeared on the Internet about changes in the trajectory of Jupiter, Mars and Earth, which caused the effects of forces on these gravity planets of a dark planet whose mass is close to the mass of Jupiter, which was between Jupiter and Mars. That is, the calculations of astronomers actually confirmed our conclusion that this dark planet has a much larger mass than the Earth. Therefore, the use of spiritual practice averted the threat of a completely real destruction of the Earth by the forces of gravity of this dark planet.

3.3 Neutralization of hybrid threats from objects of type 3i/ATLAS

On the Internet, astronomers anxiously reported the appearance of this interstellar object, which cruises through the solar, and its approach to the Earth and the Sun poses a hybrid threat to humanity.

At the same time, astronomers eagerly expected the arrival of 3i/ATLAS at the point of perigee near the Sun. However, 4 bottoms before this event, we applied spiritual practice with an appeal to God to remove 3i/ATLAS outside the solar system. The consequences of this were not long in coming, since soon on the Internet astronomers had a panic due to the fact that this object weighing 140 billion tons evaporated and did not appear at the point of perigee at the expected time. But a few days later he was found at a great distance from this point, which confirmed the effectiveness of the application of spiritual practice to eliminate possible hybrid threats to the security of mankind.

In this regard, it is recalled that about 40 years ago, the idea of using asteroids for military purposes to defeat large cities of the Soviet Union was worked out in the UK. However, it turned out that all suitable asteroids have crews. Moreover, within a short time, under mysterious circumstances, many leading scientists who took part in this project died.

This, as well as the fact that 3i/ATLAS has adjusted its course several times, so it is definitely a spacecraft that was built by an extraterrestrial civilization based on an interstellar asteroid. In addition, the 3i/ATLAS crew uses mental methods for letters to Earth, like the civilization that, as mentioned above, taught 90 teenagers from all over the Earth in a star college. Therefore, it is possible that 3i/ATLAS belongs to this civilization. At the same time, it is obvious that the technological level of NASA's space technology will not allow to take effective measures to ensure the safety of mankind in the event of aggression by 3i/ATLAS, which, according to astronomers, could threaten the safety of mankind.

4. Discussion

The above information indicates that an unknown civilization 20 years ago taught 90 teenagers from all over the Earth how to direct crowds of distraught people in the right direction. To do this, they may well use EIF, the properties of which allow these specialists to use them to physically influence people. Managing EIFs and crowds of distraught people, these specialists will carry out mental methods that this civilization, as shown above, successfully applies in practice. Moreover, one of the last messages 3i/ATLAS sent to Earth using a metal connection. All this indicates that the 3i/ATLAS belongs to this civilization, and the purpose of its arrival is not at all in the transfer of technologies to earthly brothers in mind. Judging by the fact that 3i/ATLAS has the ability to influence the parameters of the Sun, which can cause instant global climate changes, panic on Earth and the appearance of streams of distraught people.

Therefore, it seems that his arrival poses a serious threat to the security of mankind, which must be prepared for, including the use of spiritual practice to neutralize the influence of 3i/ATLAS on the Sun. According to astronomers on the Internet, the effects of 3i/ATLAS on the Sun caused the formation of new dark spots on its surface, the merger of which formed something similar to a fault, which alarmed astronomers. Therefore, we applied spiritual practice with a request to God to eliminate the consequences of this influence of 3i/ATLAS on the sun. The next day, according to official reports of the activity of the Sun, there were almost no dark spots on its surface, and its activity also decreased.

Consequently, spiritual practice opens up the possibility of ensuring the safety of mankind from hybrid exposure to the Sun by alien civilizations.

In addition, astronomers have discovered at a great distance an interstellar object that exactly repeats the maneuvers of the 3i/ATLAS, and its size is 100 times larger than the size of the 3i/ATLAS, so it seems that only the use of spiritual practice can save.

5. Conclusion

The results of our research given in the article confirm that science does not yet have the ability to timely detect objects consisting of dark energies & dark matter. However, the technologies we have developed make it possible to observe objects consisting of dark energies in the C-radiation spectrum, such as EIP, which we have been observing for more than 20 years, which purposefully accelerates global climate change by exposing the Sun to quantum energies generated by cellular communications, electric and cars and other world technology. The existence of these energies follows from Einstein's service station, and their impact causes various diseases and increases the mortality of the population. Moreover, it is possible that not the ability of physics for 100 years to understand the origin of these energies and introduce standards to limit their emission from technology suggests that mental effects on physicists, which are cultivated by alien civilization, are involved in this.

Therefore, the article proposes to apply the results of our studies, the technological level of which corresponds to TRL 2 - 3, which will allow:

1. develop and implement binding standards to limit the release of C-radiation from world technology, which will eliminate the impact of EIF on accelerating climate warming and reduce the number of diseases and deaths from cardiovascular diseases.

2. using long-range space communication radios, broadcast quantum energies to clean the Sun from EIF.
3. will provide observation of the Cosmos in the spectrum of C-radiation in order to timely detect objects from dark matter and take measures to protect humanity from threats that may come from them.
4. Based on the spiritual practice we have developed, work out a methodology for the timely removal of objects from dark matter from the solar system at a safe distance, as well as objects such as the 3I/ATLAS and the object associated with it, which is 100 times its size.
